Hah! As if you've ever had an original thought in your life, George.
Oh, and George.. "go play in traffic", (your words, fruitloop). LOL!

Well done sir! Yet another link in the troll chain!!

By the way, I'm not a ham.

>Errrr, get your
> "Amplifier Sticker" on your driver's license yet?
>

What's an "Amplifier Sticker" and why would I want one?

Oh, now I get it. You're telling me that my powers as a Master of the
Obvious pale beside yours.

I admit defeat.

You seem to have a serious anal fixation. Have you ever thought about
removing your head from your ass, it would probably relieve the
pressure to be so incredibly anal.

No, sorry no lits of haet, although I did get on another lits of haet
today in alt.alien.visitors which puts me 1 step closer to the 20
gallon sombrer0.

Still with the anal fixation danny, you are really in a rut with that.
Try something that is a little less over used, maybe a punctuation
lame.

Good one ..... I've been involved in this hobby, service, endeavor, passion or whatever for 40 years plus. It is always an amazement to me the cheap-Os that are out there that want something for nothing or near it. OTOH I have met a lot of nice people who would bend over backwards to give me parts for nothing for my projects. That is the ham spirit at work and those are the ones that I remember after all these years.

God Bless 73 KI3R Tom Popovic Belle Vernon Pa.

Even if the tube story is false .....the true nature of a lot of hams show through. I have been at fests where rediculous conversations of this type ensued. True greed .... guys would scam parts to fill their private warehouse only to fullfill their obsesive compulsive disorder .... I read with a grin the crap I see that goes on in E-Bay and the lists. I have seen old ladies who have been super scammed by supposed friends of their deceased husbands for equipment. The one fellow I really agree with is the one who is getting buried with his mint Collins station ....he is taking it with him.

While it would be entertaining, they'd be too chicken-shit
to show up.

Rat-tard has a long history of doing the cross-post stalk, and
this time his lame routine back-fired. Another keyboard blowhard
bites the dust.

One day in the near future, after your mommy gets tired of working two jobs to support you, and when the welfare system recognizes that you are a lazy bum and stops sending you checks and food stamps, you will be forced to make a choice: Leech off of someone else or get a job. Somehow I think that you will end up in a homeless shelter, but on the slim chance that you actually can find gainful employment you will learn a few things. First, you will know what it means to -earn- your keep instead of stealing or begging for handouts. You will also learn that keeping a job requires responsibility and personal integrity, and I suspect you will have to fill out quite a few job applications before you learn -that- lesson. But when you finally settle into a job where you don't piss off the boss or embezzle company property, about a year later you will learn that employment comes with a perk called "vacation time". This is not a benefit that is handed out freely -- it must be -earned-. And because it is earned, vacation time is something that you won't want to waste sitting in front of the computer and arguing with paranoid trolls on a newsgroup. It's obvious that you haven't learned those things yet, and you won't learn them for quite some time. Until then, you'll just have to take my word for it.

Actually the last two are soc.men xposts, those get in while I am
spanking socmans. But if you insist,soc.men, alt.usenet.kooks and
alt.fucknozzles added, a.b.n-s-c dropped to be nice to those people.

Careful what you wish for spanky.

Now Spanky, you were saying?

You think that fag lames, spelling lames, name lames and ad hominem is
spanking me? How nice for you in a delusional and incompetent way. You
know they do have ways of controlling those now days, you really
should explore them.

So lets explore this obsession you have about the spanking you took 6 months ago. I understand you are still angry about that but you really should learn this is only usenet. Obsessing constantly and inventing ways to get spanked again are not going to help with your self-esteem issues.

Spanky,
You are very possibly my newest bestest k00k toy. You wanted this
x-posted to AUK, so now it is. So why don'y you tell AUK about
yourself. Your qualifications as a k00k and why you wish to be
nominated for a k00k award. But as usual you will run away like the
little boi you are and avoid all questions. You know that is a trait
your hero the Unitard displays too.

Prices are PLUS shipping from 96002 or you can pic up in Redding,Ca.
I have two (2) very nice Yaesu FT-101EE. One is a older model and has
11m. on the band switch. The other does not. Both have full output.
Plastic on face. Both have the fans installed. Both are in ex.cond. No
manuals. I only have one hand mic. Both have power cords. Price is
$275.00 each.
President HR-2510 in ex.cond. Was only used a few times in a RV then has
been in the original box for the last 8 + years. Comes with the power
cord,bracket,and mic. Mic has a bad element. Price is $125.00
I can email pics. Please reply to kf6ikc@sbcglobal.net and not to the
lst.
Take care,Stan (530)224-1136

>Why are you selling gear to CB operators that

>they cannot legally use?

Many cb operators are also hammies. Even if one isn't a hammie, the law
still permits the purchase of this equipment and you are owed no
explanation. I know your self-esteem takes severe beatings when your
impotence is highlighted and made sport of, so I promise not to do such.

PKB much spanky?

You seem to be obsessed with protecting a 5 time winner of k00k
awards. Why is that? You wish to replace him in my personal pet k00k
array? I have several pet k00ks. Harry Ballsac in soc.men, Chuckwheat
Bonehead in alt.aliens (he is borked *sigh*), Alexa Cameron in
alt.aliens, the Unitard in a.b.n-s-c and now you in your little CB
radio group. Hope you enjoy the stay. Your favorite groups will be
thanking you for it later.

Don't you just wish you had kept those damn fingers off the keyboard?

Doing pretty good at it, why do you ask, jealous.

What cracks me up spanky, is that while I sit here with a nasty smirk
on my face, I can just see you pounding that keyboard like a pissed
off monkey trying to open a coconut. All you can come up with after
all that work is to repeat your fuck-chop lame. Pathetic.

And yet you just had to start a whole new thread to announce that
belief? Obsess much?

You know why you had to do it. You are still whiney because you got
spanked by every one in a.b.n-s-c (especially me) and it just sticks
in your craw.

So lets ask the simple question of the simpleton:
Did Easynews or Giganews ever answer that question you were so
obsessed about 6 months ago? You know the one that got you spanked so
hard you are still obsessing 6 months later.

NetKKKopping too. Funny I am still here.

Still delusional Harry, only one being bashed is you hitting yourself
over the head for ever thinking you were smart enough to take on even
the lowliest (me) member of AUK.

CotM time for Harry!!!!!!

Please to accept my nomination of Harry Ballsac for July Coward of the
Month. I know it is early but Harry has been campaigning extra hard
the last couple days. He has been personally spanked so many times he
has now resorted to netKKKopping and k00ksuit threats.

>Add sausage to this recipe.

Pre-boil the sausage just enough to take the grease out and sautee it with the mushrooms and onions,,make sure it's cut up small, or even ground.

Vidalia Onion Pie with Mushrooms

1 large Vidalia onion, halved and thinly sliced
2 cups sliced shiitake mushrooms
1 tablespoon olive oil
4 large eggs
1 cup whipping cream
1 tablespoon chopped fresh thyme
1 1/2 teaspoons salt
1 teaspoon pepper
1/8 teaspoon ground nutmeg
1 frozen (9-inch) deep-dish pastry shell, thawed
Sauté onion and mushrooms in hot oil in a large skillet over medium heat 15 minutes or until tender.
Stir together eggs and next 5 ingredients in a large bowl; stir in onion mixture. Spoon mixture into pastry shell, and place on a baking sheet.
Bake on lower oven rack at 350F for 45 minutes or until done.

Thank Spanky, all because Spanky is obsessed over a righteous spanking
he took 6 months ago (mostly me). Now ask Spanky why he is obsessed

with what I post? If I am such a bastard, why does he read it, start new threads and challenge me? But it seems from his latest post he is now running away (again). He does that well too. Picks fights then runs away. Good person to have for a friend, hope you enjoy him.

'Ratz

PS Welcome to AUK, we like kooky cowards like spanky here. You can stick around and enjoy the show if you like. There is live entertainment on stage 2 but the bar is a no-host bar, sorry. Bring some friends,kick back, find a stick and play poke a k00k.

That's ok,,,,,if he can guarantee removing all traces of petroleum and
oil from it, we'll make it part of an artificial reef.

LOL!!! I would even kill him if he dropped a 340 on
someones doorstep.

>> just jealous of Blob and his VVFWS award.
>
>Whatever goof, just deal with your stupidity and your gay bashing off line.

NetKKKopping too. Funny I am still here.

Still delusional Harry, only one being bashed is you hitting yourself
over the head for ever thinking you were smart enough to take on even
the lowliest (me) member of AUK.

CotM time for Harry!!!!!!

Please to accept my nomination of Harry Ballsac for July Coward of the
Month. I know it is early but Harry has been campaigning extra hard
the last couple days. He has been personally spanked so many times he
has now resorted to netKKKopping and k00ksuit threats.

No and neither does this or any of the other 5 NSPs to which I have
access not counting my ISP. ALL the abuse desks will tell you to use
you KF. Now if you are like spanky and are unable to figure that out
then do not read the posts.

Threating to netKKKop over Spanky picking a fight in a newsgroup I am
a regular in and me taking it back to a newgroup he is a regular will
get you laughed at by every news admin I know. Ask yourself how does
he get all those accounts and only pay for one. Maybe he knows just a
few news admins. Yes, they get very pissed off at me when I do this
but that is all they do. So whine away.

PS: It really is BuzzardNews not UNS, Buzzard resells UNS.

>Add sausage to this recipe.

Pre-boil the sausage just enough to take the grease out and sautee it
with the mushrooms and onions,,make sure it's cut up small, or even
ground.

Vidalia Onion Pie with Mushrooms

1 large Vidalia onion, halved and thinly sliced
2 cups sliced shiitake mushrooms
1 tablespoon olive oil
4 large eggs
1 cup whipping cream
1 tablespoon chopped fresh thyme
1 1/2 teaspoons salt
1 teaspoon pepper
1/8 teaspoon ground nutmeg
1 frozen (9-inch) deep-dish pastry shell, thawed
Saut&#65533; onion and mushrooms in hot oil in a large skillet over medium
heat 15 minutes or until tender.
Stir together eggs and next 5 ingredients in a large bowl; stir in
onion mixture. Spoon mixture into pastry shell, and place on a baking
sheet.
Bake on lower oven rack at 350F for 45 minutes or until done.

Thanks much! I admit it, I'm an onion fan.

See all you can do is lame and now plagerize. Not an original thought
in your head. I at least took the time to give you some decent lines
(the monkey and the coconut was especially good). Where as all you do
is copy lames and post k00k sites. Not much going on between them ears
is there spanky.

Now wait, you have already run away twice in just the last couple
posts, why are you back?

I had a similar experience several years ago. I went to the local
once-a-month ham radio sidewalk sale and had a really clean, nice
working Hallicrafters S-40 for sale. This guy walks up and offers me $25
less than what I was asking. I refused. He said I would never get the
asking price and would be lucky to get what he was offering. I said if
it did not sell, HamCom was comming up in a couple of weeks and the
price there would be even higher. He stomped off but came back a few
minutes later and lays down the amount he offered and picked up the
radio. I ask just what the H did he think he was doing. "I am buying the
radio". I informed him that my asking price still stood and please put
the radio back and take his money and go somewhere else. Now he is
really POed.
Well as luck would have it he saw the radio at my table at HamCom marked
up at almost twice what I was asking at the sidewalk sale. He looked it
over and walked away only to come back about an hour later, with money
in had, to find the set was gone and asked if I had sold it. "Yep" I
smiled, "and at the asking price too". Doncha just luv these clowns?

DING! DING! DING!

Yes but I have to put him on the back burner for a month as Harry
Ballsac has gone over the top for a CotM.

He is also extemely obsessed with my poking the Unitard. Upsets him
greatly that I enjoy torturing the 'Tard.

But he is in the process of running away now. So I will look him and
his clown posse up next month (or when things get slow around AUK)

Chuckwheat is BACK!!!!!

[snip]

Sounds like the presumed greedy ham should have bought the hard-to-find
bargain tube for a buck just to keep it out of the hands of the other hams!

Well I price things 25 to 50% high and since all buyers dearly love and must have "a bargain" -- they offer me a riduclous low ball offer.
We barter, shout, accuse each other of taking food from our childrens mouth etc
Finally we agree on the price I would have sold it for to start with.
They snicker as they take away the treasure and just know they beat me down.
I snicker as it worked again -- seldom fails.

All this is not limited to Hams -- it is an international practice. In some countries they have no respect for you if you don't go thru the drill of bartering. I have experienced this same drill in the good old USA for used goods, flea markets, newspaper ads, et al.

We all have heard:
I just went to the sale -- saved $40
He/she started at $100 I stole it for $75
The guy/gal was desperate sold it for $50 less
I can turn around and sell this for a profit
on and on goes the bartering process

Ya know they gonna low ball you so start high and spend the time to bargain -- old american custom, everyone walks away happy.

--

>The Unitard is hero to nobody. Gotta be a sock.

No, just a junior spanknozzle that has now run away and hid in his CB
group. He has an obsession with me using my sharp stick on the 'Tard.
Seems to upset him greatly and makes him post hissy fits. Then gets
upset because I xpost his wanking off to groups where he is a regular.
He has a pretty dull clown posse. There is a lady in there seems like
she could have some kookologist talent but the rest are pathetic. Anal
fixations, fag lames you know the route.

BEST part, since I was xposting to his favorite groups wankstain
insisted I start crossposting his spanking to AUK, so I did. How nice
of him to oblige.

Wankstain, it is a k00k group not a flame group. Remember when you had
to beg Buchanan not to beat you any more because you were not the
SapTard? Same group. Go ahead try to deny it. Achives do not lie...

I like how you did exactly what I made you do. Whine about xposts then
bring up AUK.

Please to carve OWNED on your forehead.

Many CB operators are hams and they read that group.
Many are not. It's a crap shoot.
What makes you think cb operators don't watch the Ham groups
looking for radios??
Oops, there it is. :-)
In my opinion of course.....

Yesterday at two different times you claimed you were going to run
away. But you just keep coming back for more. How nice for me and how
embarassing for you.

I like the part where you claim I am obsessed with the 'Tard yet you
cannot find one direct response to him from me in at least 4 months.
Yet you obsess over each and every post I make just to insure I do not
harass your hero. Why are you so protective of the 'Tard?

Seems a bit obsessive to imagine that you can moderate unmoderated
news groups. Are you just a control freak with out any ability to
control yourself?

You begged and whined at RB for two days you were not SapTard.

So you been googling the hell out of me to find so me RL info you coward? I here you like driving to people's houses who kick your butt on usenet. Poor baby, cannot differentiate usenet from real life. Pretty pathetic.

>

Since we got this Carny/Rube thing goin' on.....

It isn't all the buyers with the problems, though. I've managed to
insult a lot of sellers with my first offer. So while they are bitching
and moaning at me about how much the thing is worth, and probably think
of me as the type described in the original story, all they had to do
was deal for a little while, and then we likely arrive at a price that

satisfies both of us.

This is America, and you are allowed to ask any price you want for what you sell. The buyer can also offer any price they want.

I would suggest that if a person is firm on all their prices, and doesn't want to deal, they might want to sell retail.

None so far, but it is early yet, he does like stalking and RL
threats. He just admitted he stalked two HAM radio guys to their
houses. He also wants me to come to Ohio so he can offer up a beating.
Best I can do for him is St. Louis in probably September. Plus he
would have to tell me where he lives. You know that will never happen.

I wonder if we can get Spanky and the Mt. Pocono Kid together for a
real k00k fight.

Hello Chris:

The lil wil antenna is smaller low performance antenna, designed to be small and easy to install. Its purpose is to allow you have short distance communciations, say 5 to 10 milkes in good areas, or just chit chat with local stations.

You can improve the antennas performane by installing a wire from the antenna end coax shield wire to the vehicles body. Maynot be real easy.

But then I would check the SWR to make sure it didn't change much.

The lil wil, will have a narrower bandwidth as compared to other longer antennas.

Jay in the Mojave

Television Evangelical Show

---
grandpa and grandma were watching the television
evangelical show and the preacher said, if the
viewers at home wanted to be healed, place one
hand on the television set and the other hand
on the body part where they wanted to be healed.

Grandma got up and slowly hobbled to the television
set, placed her righthand on the set and her
left hand on her arthritic shoulder that was
causing her to have great pain.

Then Grandpa got up, went to the TV, placed
his right hand on the set and his left hand on
his crotch.

Grandma scowled at him and said, "I guess you
just don't get it. The purpose of doing this
is to heal the sick, not to raise the dead."

Still obsessed with my posting habits Spanky. Very very obsessed it
seems.

Now you still have not found even one direct response from me to any
of the 'Tards posts. Which puts just a minor little dent in your
delusional obsession.

So where in Ohio should I be going to meet you?

Still don't get it do you? You dance to my tune. You post what I tell
you. You make childish real life threats and display incredible
ignorance. You snip and run all because, as your owner, I say you
will.

How fun. A newly minted and wholly owned k00k.

Welcome to usenet noobie.

I think I shall work you in to a sufficient lather (which will turn on
GoofPrints *shudder*) to get a nice KotM to staple to your forehead.
Right under the O\/\/3N3D awning I am presently erecting.

What is this crap? RRCB has enough strife without importing more from
the kiddie newsgroups.

The kid you are "debating" with Stevo, is probably just getting his
first zit about now......

Hypocrite, why did you cross post this to all those newsgroups if it was a message to Spanky? You as stupid as him too?

Nice ad hominem, but you really need to use something that at least touches on reality rather than just projecting about yourself.

KI3R, which hamfest might this have been at? Butler? There are a lot of
shysters out there wanting something for nothing. Amazes me how they afford
the hobby!

Well, whatever... they're both in the same place (in Butler) so I just say
Butler... Not to single anyone out. I enjoy both hamfests when I can make
them.

If "CB" stands for "citizens' band", they also haven't grasped the
fact that their favourite hobby went out of fashion about two weeks
after it was invented.

It's like finding a remote island inhabited by enthusiastic fans of
Pong[1] who all wear cloche hats with footer bags. Wonderful!

[1] Pong was a game invented by Tim Thorne, Eddy Wollmann and Blob
after praying to the Asatru Ghods for inspiration. HTFH!

Why, I smack you around like a like Marvin Hagler did to Frank
Fletcher. What you need to concern yourself here, cupcake, is the fact
I am the most junior and least skilled of the AUK minions. So just
imagine Spanky if in some way you actually disturb the aura of AUK
with your stench and the more talented decide to join. You were the
one that insisted this be brought to the attention of AUK. You do
remember challenging me to xpost to the groups I *infest*. Son you are
just a toy and you need to keep that in mind. You are alos the least
interesting of the k00ks I presently am studying. There are at least
three that are much more talented in *Teh Way of Teh K00k* than you
asshopper.

Now do remember who started this my lil cupcake. You could have saved
yourself a lot of embarassment and stress by not challenging me. This
could end for you. All you have to do is admit you are still whining
about the beating you took 6 months ago and you tried to get some
measure of your manhood back and it all backfired horribly (again).
You could just *plonk* me and say you quit. You could apologize to me
and all the newsgroups you plague for being a self righteous control
freak. You could continue this until everyone in the groups you plague
puts you in their KF for being such an ignorant fuckheaded wank badger
and you effectively place yourself in the Galactic Killfile.

You choose.

Nice lie my little toy but the real story is here:
Message-ID: <20040708163602.457$Mt@newsreader.com>

>Try x-posting to your favorite groups then, rat-turd. You're getting
>spanked in mine. ::slap::
>
>alt.usenet.kooks
>soc.men
>alt.feminism.
>soc.women.

Which was exactly when I did xpost to AUK. So any more cowardly lies
you wish to create to promote the idea you are not my personal
spanktard. I do enjoy when they get spanked so hard they start making
up lies that are easily retufted without the *MIGHTY WAND OF
RETUFTAION*

BTW just so you have it in a format you understand Google boy
http://makeashorterlink.com/?M195224C8

Please do continue allowing me to personally fuck up you whole life to
the point where all you do is eat, sleep and think about me.

HAND!

No Lou I wasn't around when the tube tale went down ....but I was up at Butler. Always enjoy looking at the junque that I have seen guys carying around for at least 2 decades and trying to dump the same. I gave up that scene about 20 years ago after filling the back of my Surburban with ballast and then realizing that my vehicle and back were taking a beating. The garbage men really went wild the next day when 90% of my junkbox went out to the alley.

My comments are also directed at the sellers who use something for 10 years and want 95% of the retail price.

Take care 73 KI3R Tom Popovic Belle Vernon Pa.

Not embarrassed, but I understand your urge to have the last word.

We might even end up being friends, happens all the time with me.

Rock on.

ps..no killfile on this hook-up, I'm on Curt's interface. It rocks
for text.

No, actually he's said it many times.
The other fact is that he answer every post
that has his name and call signed attached
to it makes it him.

I've sent a complaint though. I do
appreciate the fact that they have contacted
him and asked him to stop changing nics. I am
thankful that he has adhered to that too.
Now that I have said that, watch him
start to change his nics, if he doesn't, I
can say thanks again for adhering to TOS
for Comcast.

Hello Lancer and Chris:

I didn't see this orginal posting?!?!?!?!?

If you are grounding the radio and coax shield at the radio end of the coax and this significantly is changing the SWR, then that tells me that the coax is not properly grounded to the vehicles body. And you have the coax radiating a lot. Or that even the antenna itself has something wrong with it?

I have noticed that some magnet mount antennas, the SWR can change a little by moving the coax around a little. This maybe true with the lil wil antenna. I have replaced the cheap RG-58 Coax on the lil wil antennas with the good stuff, RG-142 its a Teflon double shielded coax that is bullet proof.

The lil will antenna can be tuned by changing the antenna length od the internal coil being compressed or uncompressed.

Personally, I believe Amateur Radio Licenses should cost $75 per year for
regulatory fees and the Commission should elimanate testing. I also believe
that is how it will eventually be in the near future.

73,

Me

Doubtful that testing would be eliminated. International treaties require that there is proof the operators meet minimum qualifications.

Since the FCC has given testing responsibility to the amateur community, the FCC simply issues the license so they don't have any vested interest in eliminating testing. And of course they issue the regulations and enforce those regulations like they do for all communications services.

Besides testing is needed to attempt to insure that the licensees will have learned the basics of operating. Hams have such a wide range of privileges and frequencies that some basic knowledge truly is a necessity. We already have enough lids slip through so let's not make it worse.

Unless, of course, their price is already ridiculously low. I was selling a used tuner at a hamfest for 1/4 of what a new one would be as I simply didn't like it, wanted to get a different one, and wanted to be sure to sell it. A guy tried to bargain me down but I simply told him that we both knew what they sold for both new and used and I wasn't budging. He forked over the asking price.

Rich,
If you are going to make posts about items "FA", EBay has
strict rules concerning Spam. You can make one post with
all the items listed, you don't need to make a single post for
each item "FA". I've asked and a number of others have asked
that you do this, I would hate to see you're EBay account pulled
because of this, but with enough complaints it will happen.
So please, make one post, list all the items and most
people will not mind your posts, but continue to make these
one post per item "FA" and Spam the newsgroup with them,
I would almost guarantee that Ebay will cancel your account.

Landshark

LMAO

By whom?

It sure is not any of your soc.fr00t buddies as they all run and hide
except Harry Ballsac, he just gets beaten like Steveo does.

This fruit cake hangs out in soc.men also know as misogyny central.

Some of his more prominent fellow posters on the issues facing todays
poor abused and under privileged men:

Blob: Urine for aftershave, rape of women or children is a mans right.
Stephanie Taylor: Kill all the women and the world will be good.
Harry Ballsac: Moron extrordinaire and socmans legal expert.
Kenny Pangborn: krp is well krp

So Danny boy, want to play.

Lets make sure AUK and soc.men are included in the fun.

'Ratz

Alun, are you saying that its the vanity people that require them most
regulatory attention, and thus should pay more?

No. How could you get that from what I said?

All I am saying, if I have to spell it out, is that there is absolutely
zero probability of theory testing being abolished and not much more
likelihood that fees will be reintroduced for other than vanity calls.

And furthermore, a $75 fee is not in the least likely to reduce bad
behaviour on the air.

At 1/4 price, sure! I usually won't buy above 1/2 of currently
manufactured price. Elswise, I'm happy to buy new, with a warrantee and
I'm also not buying someone elses problems. My main point in this whole
discussion is that there are a lot of sellers that seem to hate buyers.
The Carny vs Rube thing.

My point was that he STILL tried to bargain me down even though we both knew
it was already lower than it should have been.

They used to require Morse code. The testing requirements could be
removed just as easily as the Morse requirements were.

I have an old CPI CP2000 40 channel base with a separate frequency counter.
I am looking to sell this on Ebay. Any ideas on how much I ask for this
radio?

Please reply to jkdrummer@yahoo.com

TIA,

Jim

Hello me ??????? oh well ....

You have an excellent suggestion there regarding the 75 bucks a year. That would get the Feds the kind of enforcement clout that would have all the echo chambers, illegal KW users, freebanders, shrimp boat screw-ups, 25 alternator pick-ups, 10 meter truckers, illegal 11 meter bums ETC. running for the hills, burying their illegal rigs under the manure pile and getting into leather working or beanie babies. The enforcement WAS that way. I know a lot of people in the past who got hit with $500 (1965 dollar) fines. So me you have a very positive idea there ...one that I would have no trouble with. IF one really wanted to be a ham then 75 clams would be a bargain. However the cheep-Os would be squealing like a greased pig if this were to pass. Also the testing could be given back to the FCC where it belonged in the first place where, like I said before, shenanigans could be minimized.

Testing elimination ? ..... probably not for a while but one thing I would suggest is that with the funds the present 11 meter system could be shut down permanently and placed up on UHF where CB would realize its original intent.

Take care all ..... KI3R Tom Popovic Belle Vernon Pa

Hi,
Yes, Ebay's TOS for using their service strictly forbids individuals
from spamming people or newsgroups with posts on what's for auction.
They can make one post, with links to all the individual items posted,
but when someone makes a single post, for each item, taking up a large
amount of bandwidth, Ebay's TOS strictly forbids it.
Again, if he wants to make one post, with multiple links to each
item, not a problem, but the posts he makes are against their policy
and as such he should adhere to it.
Don't let Geo sway you by his inability to go to Ebay's TOS and
read it himself, go to there website and check it for yourself, it's all
right there.

Landshark

LOL!! Geo can try all he wants, but Ebay has strict
rules against posting each individual item as a single post.
Again, if he post, one post, with all the items, with a
link to his Items page, I'm sure it's not a problem, but to
continue and Spam the group with each item, individually
posted instead of a single post, Ebay's TOS is quite
clear on that.

Just enjoyed a great week trying PSK31 on 27.500 usb.

Don,t know if any of you guys want to try but I would certainly be
interested in trying to get to the states on this mode,later in the
summer/autumn.

I,m running a wire antenna some of the time and a IMAX2000 only 10 feet from
the ground !! with 5 to 10 watts (sometimes down to 5!!!)
i,ve copied Lichtenstien! France Spain Austria and Germany...

QRP in the extreme for me and totally oblivious to QRM/N 95% of the time.

You can SEE the signal on screen so not even any audio in the shack...

5 to 10 dollars to conennet to the computer soundcard and your away.

Anyone interested please get in contact with the group.....

http://packetforums.red-heat.com/

all the best and hope to copy you soon

Fred Riley is an eccentric electronic engineer whose theories have put him into the heart of a controversy he never intended. That he is being remarked upon here is evidence as to just how far out of hand this issue has gotten, inducing passionate, emotional diatribes in place of calm, civil debate. - A situation that Doctor Riley would never have countenanced.

Please leave this innocent, torented scientist alone, unless you can come up with the math to refute his theories - as none have so far been able to do!

I thought you were the one voting for a flogging. Maybe that was the
site author, voting with his many accounts.

I must admit that this site is quite funny, comparing you with Sadam and the
Devil. The best part is the way the vote is not going the way they hoped, so
they have to make up excuses rather than face the facts.

You are a modern day Robin Hood, taking from the big bad FCC and giving to
the people, and the people love you for it.
One day, someone will write books about your battles and bravery and people
will ask, "was this Twisty real, did such a gallant fellow really exist?"

:~)

Peter.

The problem with Dr. Riley's theories is that not once, during any of
his recorded lectures, did he explain his findings without giggling.

Personally, I find it disturbing when a scientist of such high regard
offers a proof of his findings in mathematical format and when it comes
to the hard math, he simply leaves it as "well, the numbers lie a little
but you should just take my word for it". His highly controversial
paper "Tesla Stole My Underwear", while entertaining and a good read
while listening to Jimi Hendrix with low-light conditions and smoking
marijuana, really seems to be a little beyond science.

Dr. Riley does sometimes giggle during his lectures, but the behavior has nothing to do with the materiel he is presenting. Instead, it stems from an unfortunate incident during his first public speaking engagement, where stage-fright almost kept the poor man from ascending the podium in the first place. At the last moment, the exasperated dean of the college suggested to the shy doctor that he imagine the members of the audience were all sitting in their underwear. This allowed the shy, asocial doctor to present his lecture, but to this day he still sometimes giggles at the podium...

Yes, Einstein was saying much the same thing when he spoke of the probability of "God playing dice". Many of his colleages were disturbed by the reference then, just as you are now. The same can be said for Watt's contention that we declare research to have come to a "conclusion" when we tire of gathering and weighing the facts, as opposed to when we have actually gathered and weighed all of them. Nonbody wanted to hear about

that, either.

>His highly controversial

Well there you are... I never saw much entertainment value in the paper, perhaps because of my preference for Eric Dolphy accompanied by a bright Pinot Grigio, as opposed to your taste in auditory and chemical amusement aid. Turn up the lights, open the windows, air out the place a little and I'm sure you'll have an easier time appreciating the doctor's work. After all, it's not as if his tenure were at Harvard!

Surely "Tesla Stole My Underwear" should have given you a clue to Fred Riley's giggling behavior, but it appears you never made the connection and turned to drugs. You really owe it to yourself to review the doctor's work while in the proper frame of mind. Many have claimed that the man is unbalanced, but I can assure you that Dr. Riley's balance is a delicate one, maintained by will alone. You could do worse than to follow his example, there.

Crank up the Eric Dolphy... Throw back a glass or two of Pinot... It will all start to come to you as the evening progresses, I'm sure.

Charles Brabham, N5PVL

That story is older than Riley and has been told many times about "shy"
speakers.

BP I am talking about TWISTEDHED and once again here you are butting
in why is that what do you care who says what about the guy unless you
are part of his army of weak minded followers?

>I thought you were the one voting for a

>flogging. Maybe that was the site author,

>voting with his many accounts.

>I must admit that this site is quite funny,

>comparing you with Sadam and the Devil.

I DID see that site, it was sent to me a week or so ago, but I saw it before the poll was added. I even commented on how funny it was that the dude from Deadwood was listed. I didnt know it was the same site until this past weekend when I walked on water, waved a hand from the Gulf, and had his site terminated.

>The

>best part is the way the vote is not going the

>way they hoped,

Well, that's why they must carry around the term "impotent".
Hehe,,I'm sure you noticed, nothing has been going his way lately. The pent up hostility and frequent praying to myself by him is but a bonus of his meltdown

> so they have to make up

>excuses rather than face the facts.

Hehehe,,,yea,,I'm attributed many great feats in my absence,,hence the parishioners of "akc".

>You are a modern day Robin Hood, taking

>from the big bad FCC and giving to the

>people, and the people love you for it.

>One day, someone will write books about your
>battles and bravery and people will ask, "was

>this Twisty real, did such a gallant fellow really
>exist?"

<g> Oh yea,,speaking your mind can get you called all kind of names from the disgruntled hammies who often use the term "akc" . Google shows Frank -n-Nad, Davie, Geogre and N8, exclusively used the term in the past and on aregular basis until N8 was shown to be a lifelong repeat criminal. This little group of miscreants lost their self-respect, credibility, and any points they ever were trying to make concerning legal radio when N8 was shown to be a felon, child abuser, and not of sound mind. Each one of the aboved named condoned the behavior of N8 by ignoring his cardinal transgressions against the law and defending his lawbreaking.

> :~)

>Peter.

You know, you're really tipping the sour apple cart of the ayy kay see.....it's good to see the common man make sport of their impotence.

100% favor of him

(why would they delete it what was the reason
for TOS infraction?)

>dont know exactly,

Of course you don't know, When someone suffers and sets forth a massive
communication deficit such as yourself, one can not reasonably expect
you to be able to tell the difference from right or wrong. Watching you
menstruate about rules and attempt to defend yourself in the third
character reinforces the magnitude of the effect and control of which
you give me over yourself.
Couple this with you violating simple isp governing TOS rules you are
unable to follow, let alone interpret, and your radiating hypocrisy
shines where I direct it.

>but maybe Landshark Mark Beck was in on it

>as he is the expert at whining hypocritical TOS
>complaints

Please do not mistake your ignorance for your
impotence. The two are separate traits you encompass and not necessarily
mutually exclusive.

AKC non sequitur (as usual) ..so anyways, what happened to the website?
lol!

1671. OT - New Lingo for an Old Priest

Newsgroup: rec.radio.cb
Date: 2004-07-12 16:14:10 UTC
From: Keith KC8TCQ <logdshr@nospam.bnnorth.net>
Message-ID: <lbidnfkQILREJW_dRVn-sQ@bright.net>
Source record: 184481

New Lingo for an Old Priest

There was an old priest who got sick of all the people in his parish who kept confessing to adultery. One Sunday, in the pulpit, he said, "If I hear one more person confess to adultery, I'll quit!"

Everyone liked him, so they came up with a code word. Someone who had committed adultery would say instead that they had "fallen."

This seemed to satisfy the old priest and things went well until the priest passed away at a ripe, old age.

A few days after the new priest arrived, he visited the mayor of the town and seemed very concerned.

"Mayor, you have to do something about the sidewalks in town. When people come into the confessional, they keep telling me they've fallen."

The mayor started to laugh, realizing that no one had told the new priest about the code word. But, before he could explain, the priest shook an accusing finger at him and shouted, "I don't know what you're laughing about, because your wife has already fallen three times this week!"

Say what?

10 meters was open yesterday. I hooked my PRO-90 to my Firestik KW-7 and was hearing both sides of repeater QSO's on the input frequency full quieting.

> just another bootlegger..........

Did you ever consider that 4 megs of bandwidth is the same allotment as 6 and 2 meters?
A 2510 or a 2950 make great radios to feed a transverter.

Also, CB linears can be used on 10 and 12 meters.

You should talk to folks on the radio, instead of hiding behind your monitor.
You don't have to leave your cage for that, either.

1681. Anyone have a Galaxy DX 95T?

Newsgroup: rec.radio.cb
Date: 2004-07-13 00:35:17 UTC
From: "Dr." <munged@munged.munged>
Message-ID: <yvCdnSBdYPDfs27dRVn-sA@buckeye-express.com>
Source record: 184491

Hi,

I'd like to use a Galaxy DX 95T for an in-dash installation. Can someone give me the measurements for this rig? If it's not too much trouble, please include the Length, Width, and Height, including any heatsinks, and not including the knobs.

The Galaxy site doesn't list the dimensions, and I didn't have any luck with a Google search.

Much thanks,
G

I have a Cobra 75WXST in my pickup here's a link:

http://www.cobra.com/index.php?page=shop/flypage&product_id=5&id=1&ps_session=0a7f06ed5c6bbcdefae5801fb8a5f49240f3dd67

Don't expect galaxy performance out of it but if you are looking for
something to hide and not drill holes this one is OK.

Power output is a little on the wimpy side so mate it with a good antenna, I
also reccommend an external speaker. For the price it has some good
features but you don't get any of the high end bells and whistles. Weather
band is nice.

Chad

1692. Info abt Radio Shack TRC 494 cb/wx h/t

Newsgroup: rec.radio.cb
Date: 2004-07-13 13:12:56 UTC
From: majorwiseandhammer <pcarpenter@charter.net>
Message-ID: <10f7o7id3khhoc0@corp.supernews.com>
Source record: 184502

I am looking for a battery pack for this 40 ch cb/ weather radio h/t. The radio Shack part nr/cat # is 21-1589. I was able to get the antenna and operating manual but they say they have no battery packs available. The copyright date on the manual is 1996. I don't have any R/S cat. from that far back. There are no pictures of the radio in the operations book. If even I had a picture, I could carry that around with me and ask sellers if they had any info or non working unit to sell. I can operate this unit with 12v wall wort or 12 v from car battery. It would be nice to be able to carry this unit with me and have it self contained. Any help appreciated and as I have a huge collection of manuals, mostly ham/sw receivers, some test gear and CB xcvrs, Military manuals, ham antennas, rotators etc,I can return the favor easily. Thanks in advance & any suggestions/help very much appreciated. Phil

1706. $$ simplex repeaters

Newsgroup: rec.radio.cb
Date: 2004-07-14 10:23:32 UTC
From: mapinfold@yahoo.com
Message-ID: <de02f15.0407140223.78cf5610@posting.google.com>
Source record: 184516

see http://www.amalgamate2000.com/sales/simplex_repeater.htm
This unit is a small (83mm X50mmX25mm) , microprocessor controlled
simplex repeater and is designed to interface with any two way radio
with a speaker/mic audio accessory jack . The simplex repeater will
extend the range of any low power two way radio by being paired with
a radio on the same channel, as a intermediary placed at the highest
common point between the two radios on the same channel . The
simplex unit records the received the audio from the two way radio
and when finished receiving , enables the transceiver PTT and plays
back the recorded message into the mic socket of the transceiver, when
the replayed message has ended, it places a end of message "BEEP",
(this allows the listener to know the message was actually repeated)
then it allows the transceiver to return to receive mode for the next
recording . The unit is fully automatic runs on 4 AAA alkaline,
cells draws less than 40mA The unit will drop back into "sleep mode",
that extends it battery life and depending on its frequency of use,
will run for days/weeks. Plug adapter supplied is 2.5mm mic plug
(tip positive) and 3.5mm speaker plug, spaced at 10mm. NZ$100 plus
postage

you may have won this round Twistednuts but your luck cant hold out
forever a pompus assclown like you will slip up sooner or later there
will be a reckoning down the line
-
"Round"? What "round"? What in the hell are you babbling incoherently
about, now?
"Slip up" gives the impression one is doing something less than
honorable..I wonder what you think your character Twisted is doing now
in addition to his freebanding and dx activiies? Whoops,,,forgot myself
for a second,,,I forgot the one I am addressing holds dxing and
freebanding as "criminal", yet find those listed on the Rain Report for
jamming repeaters and convicted of other crimes (such as N8) as
non-criminal. You are quite backwards, my cornfused little wandering
puppy dog. One is a "criminal" when the courts find one guilty, and only
then. the likes of yourself emotionally calling one a criminal does not
make it so. In fact, a person calling themself a criminal doesn't even
make it so. One is assumed innocent (a NON-criminal) until proven
guilty in a court of law, not merely pronounced by a fascist such as
yourself.
A "reckoning"? Excuse you, but your epiphany has already taken place,
you just weren't clued in on it as to who controls your strings. This
greatly agitates you to the point of meltdown. The majority of your
obsessive posts are about Twistedhed. You're frustrated and it shows.

We remove the hook from the Clownfish. With vicious predators, we allow
them to thrash around a bit for a second of entertainment then we cut
the line and watch them sink to the bottom to be caught another day.

That antenna is uglyier than crap! However, they work very well suprisingly. buddy my mine, Who's name is Matt, known as "Wizard" around here in Michigan, (detroit area) had one... ran a sweet 16 and a Mod V Plus into it. I really was able to shoot the skip. of course, we had to keep the engine revved, so the alternator could keep up! :-))

-Chuck

1717. Bremi BRL 200 Amplifier Wanted

Newsgroup: rec.radio.cb
Date: 2004-07-15 16:48:18 UTC
From: John <john@hisqth.idps.co.uk>
Message-ID: <40f6b54f_2@mk-nntp-1.news.uk.worldonline.com>

Oil pressure is still good. I'm re-doing the short block, and adding
some port-polish to the heads. Carb and intake are almost brand new.

Hope to have it running again by the fall, depending on how fast
I can get it thru the machine shop. I want to paint the firewall
and wells while i have the engine out.

We'll see if I get it running again that quick. (?)

Sterling and Schrader are going to be at a local track here at the end
of the month in a shoot-out. Should be fun. :)

Bummer.......... I lost a CV joint on Monday.
Had to drive home, then to work on the front wheels.
All fixed now...

Thanks, Ozark..my Mopar friend. If the block is ok, I'm gonna
re-build it since it's numbers matching. If the block is tore
up I'll buy a short block from Mopar performance, or some such.

Not to worry..that 66 will still hunt when she's ready. :)

1741. DECWARE ZEN Stereo S.E.T. audiophile tube amp-ebay one cent

Newsgroup: rec.radio.cb
Date: 2004-07-16 11:02:00 UTC
From: Trippin28track@wmconnect.com
Message-ID: <d80c967c.0407160302.40f438ab@posting.google.com>
Source record: 184551

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&rd=1&item=5710056584&ssPageName=STRK:MESE:IT

Up for sale a single ended triode tube stereo amp-

DECWARE ZEN
(2) RCA inputs, gain control (will eliminate need for a pre-amp when using tape deck, CD player, AM/FM tuner, or ceramic cartridge phonograph), bias switch to control sound signature, on/off toggle, (4) spare tubes, unit has 4 new tubes, original manual and box, can be bridged for mono use

This amp has superior soundstage qualities built into the design- the music comes from the middle of the room instead of the speakers.

I know someone who runs one in an F-350 with dual alternators. That boy
has had more technical problems....,,,,nevertheless, when all is aligned
and working properly, I can think of only a few instances I could
justify that wattage,,channel 6 and the freqs where N3CVJ Dave Hall runs
his Texas Star and Dave Made. Have a super weekend.

What makes it cool? Because your sock puppet said so? In fact, I find it incomplete, incompetent, and indicative of your ignorance. You ASSume your fascist views are shared,,,they're not. Not all were reduced to your level and wish to silence and ban other Americans for speaking their minds on usenet. One thing is funny, your results were quite predictable...kinda backfires all the time on your fascist, anti-American hateful self. Count the total votes. I didn't answer your fascist question about banning anyone...I skipped it. The very idea that you continue to entertain repeat fantasies of banning those you emotionally attach yourself to on usenet for whatever reason, is indicative of the intensity for control and status for which you lust in sordid, desperate attempts to improve your incredibly low self-esteem. It got the better of you.

illegal)
in rec.radio.cb?" question.
Collins rocks! :)

>keyclowns are voting 2 and 3x trying to screw

>it up, it figures you guys cant be honest.

The term "honest" is contraindicated when it originates with you.

>For the record, adair and leland are not

>keyclowns they do not operate illegal cb

For the record, there is no possible manner in which you could correctly
claim such a statement. And because of your massive deficit in
communications responsible for embarrassing and sending you off to
google purgatory, you ignorantly ask in your poll what someone
"thinks",,then you start to cry, moan and menstruate when you get their
thoughts, incorrectly claiming that what others "THINK", is wrong
because it's not the way YOU think (radical, hateful, and in the
minority).
Get over yourself.

1756. Extra channels on JC Penney 6247

Newsgroup: rec.radio.cb
Date: 2004-07-16 22:18:41 UTC
From: Chris <spadfly@earthlink.net>
Message-ID: <5vYJc.5516$Qu5.3700@newsread2.news.pas.earthlink.net>
Source record: 184566

I have a JC Penney 6247, which is like the Colt Black Shadow SSB radios. It has channels up to 28 MHz and down to 26.455 MHz. The problem is that it's really difficult to tune it for all the channels. I end up losing power on the high and low end. If it's tuned to span the entire bandwidth better, I lose power on the entire band down to 8 or 9 watts SSB. I did a mod on a JC Penney 6241 (completely different) that fixed this completely. I removed one of the rf transformers where there were 2 in series. I don't remember the rest of the details on it as it has been a very long time ago. I did the same thing on a President Washington. Does anyone remember how this is done?

LOL!!! He can only vote twice, AOL account & Comcast. It
seems as his little joke is back firing, people are telling it
like it is.

Nope, not yet. Still thinking about whether or
not it's really worth it. I still don't understand how
Keith can get those votes, doesn't make sense.

not only that but he gets on the amp reflector, chunking stupid
comments and bragging about ratting people out on ebay for selling
what he thinks are illegal amps. and then he says this. i say again,
what a dumbass.

SWR's ??? As in plural? You must mean Standing Wave Ratio(s). Kinda' like a 'set' of beams.

Been cleanin'-up here in Upstate NY on 6 and 2 meters. Worked Texas on 144.210 USB @ 150 watts, and the Bahamas are a gimme on 6 meters. I've got the Echolink RF node up and running with a 30 watt Rat Shack amp which gives me about a 40 mile radius. This ham stuff is a BLAST !

Source record: 184596

Hi All;
I have 6 of these mystery grab-bag sorta sets of components & each has a construction box.
It took me many hours getting these so they all have about the same "stuff"
Most components are new, with some "clip-outs but all easily useable.
There are Mica, disc, other caps, BNC connectors, 9/12 volt relays, mica insulators, fet's, Chips, electrolytics, rectifier diodes, red single led's, peizo buzzers, xtals, trimmers, etc. Too much to list.
I hope the price is right?
I am asking $20ppd, shipping could cost me $5-6 depending.
Pics:

I'd like to bid on one of these on ebay since there seems to be a goodly number of them. Problem is that according to the description, they seem to have just a single mic/spkr jack for a combo accessory? If this is true, is there a mod (cable or internal) that would allow me to use my existing headset with separate mic/spkr plugs that I use on my motorcycle?

Thanks
TD

LOL!! Took the top off last week, looks killer.
People always pull up next to me honk, give me
the thumbs up. Some dude pulls up to me, honks gives
me the thumbs up, mean time were in a slow, sweeping
curve and he bounces off the center divide.
I was going to see Shrek with my daughter in Reno,
some dude waited 40 minutes outside of the movie
theater in 100 degree heat in Reno to ask me questions
about my Bronco.

1797. FREE! "THE CB EPROM DATA BOOK" OF FREQ. MODS

Newsgroup: rec.radio.cb
Date: 2004-07-18 20:20:56 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <5tmlf0pukjs9vkuftk7nnmpq5uf53pbaqj@4ax.com>
Source record: 184607

FREE!!

For advanced techs and serious radio hobbyists, we're now offering a FREE copy of our previously published "CB EPROM DATA BOOK" by Martin Pickering. (EPROM = Erasable Programmable Read Only Memory.) We sold it for many years but it's now out of print. This little manual of 60 illustrated pages is an absolute GEM of CB technical knowledge you'll just never find anywhere else. And it's yours for FREE from our Web site.

This book reveals the secrets of advanced channel programming, and picks up where our "CB PLL DATA BOOK" (www.cbcintl.com/pllbook.htm) leaves off. You'll get a thorough background in how these amazing programmable chips can be used to modify many popular CB PLL circuits for expanded frequency coverage. Covers the basic programming techniques, and even includes real PC board artwork for making EPROM circuits. Sample artwork includes EPROM boards for the popular MB8719, PLL02A, ï¿½PD2824, and ï¿½PD858 PLL circuits.

Best of all, the price is right! Download your FREE copy of "THE CB EPROM DATA BOOK" (948 KB Adobe PDF) at:

www.cbcintl.com/docs/EpromBook.htm

Don't forget to check out all our other CB specialty books, plans, kits, & high-performance accessories at:

www.cbcintl.com

SAVE MONEY! We regularly run EBAY auctions in which you can save up to HALF the cost of our most popular CB books and accessories. To see what's currently on sale, double-click the line below:

http://stores.ebay.com/id=2993436&ssPageName=L2

****
Who are we? Since 1976, we've been THE source for CB Radio technical information & high-performance accessories. Books, plans, kits, do-it-yourself repairs and modifications, 10-Meter Ham conversions, amplifiers, FM converters, bleedover filters, etc. Secrets of how to increase power, range, and privacy!

1799. FREE CB CRYSTAL MIXING CHARTS

Newsgroup: rec.radio.cb
Date: 2004-07-18 20:21:03 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <dtmlf05a45oh2pimap7upojvtul4olfdei@4ax.com>
Source record: 184609

We've now added all our crystal charts for free download/printing
(PDF) on our site. These 36 charts cover about 95% of all American
mobile & base CB models, and show exactly which crystal(s) affects
which mode or channel. Very useful for troubleshooting "dead
channels" symptom, or for modification to 10M or other freqs.

Check 'em out at: www.cbcintl.com/xtals/xtals.htm

We specialize in CB books, plans, kits, and high-performance CB
accessories. Please visit our Web site to see all those "goodies" you
just can't find anywhere else!

www.cbcintl.com

You can also download our complete CB catalog, or just the Order Form
from that page. We've also got a new Email Order Form (for VISA/MC)
if you're in a hurry.

SAVE MONEY! We regularly run EBAY auctions in which you can save up to

1800. CB REPAIR & MODIFICATION BOOKS AT 40% OFF

Newsgroup: rec.radio.cb
Date: 2004-07-18 20:21:06 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <htmlf0hhbdo1fdiohkc8j9p25uc31sme1e@4ax.com>
Source record: 184610

To learn the technical TRUTH about CB Radio without all the hype from people who are just plain ignorant, check out the following books from CBC International. They're selling right now at a big discounts on our EBAY & AMAZON stores too.

Check it out!

To see exactly what these books look like, plus all the specific, chapter-by-chapter details, see our Web at:

www.cbcintl.com

Some of the books included are:

BOOK #1: THE "SCREWDRIVER EXPERT'S" GUIDE To Peaking Out & Repairing CB Radios. List $25. The most popular "big dummy's" guide ever published on do-it-yourself CB repairs & modifications. Covers peaking of receivers, transmitters, modulation, mike problems, antenna & SWR problems, detailed frequency modifications for both crystal & PLL radios. Loaded with charts, illustrations, and specific instructions for most brands including the new export models. This latest edition also covers slider and broadbanding tricks, FM conversions, and much more!

BOOK #2: THE CB PLL DATA BOOK. List $20. The only complete reference source on CB PLL synthesizer circuits ever published! Detailed PLL theory explained in layman's terms. How they work, and how to modify them for many more channels. Includes specific PLL block mixing diagrams, truth charts, & IC pin function diagrams for nearly every PLL chip ever used. Covers all the most popular U.S. & export chassis, with specific listings of all models using the chip.

BOOK #3: UNDERSTANDING & REPAIRING CB RADIOS. List $42. Giant 370-page technical book for the professional repairman. Picks up where the "SCREWDRIVER EXPERT'S" GUIDE leaves off. Includes circuit descriptions & troubleshooting guide for 23- & 40-Ch., crystal & PLL, solid-state & tube, AM, FM, SSB, CW, American & export models. Covers test equipment (& where to find it), transistor basics, synthesizers, receivers, transmitters, power supplies, T/R switching, antennas, interference, parts & accessory sources. Over 350 illustrations including schematics, charts, and photos. Huge subject index also lets you look up repairs by symptoms. This is "must" reading for any serious CB technician!

For details on our Galaxy-Ranger Service Manual (2nd Ed.) go to:

SENTENCE C-184-502
PARTY : D1 - ADAIR DOUGLAS W
3/15/2002 1 Title : COMMUNITY CONTROL TERMINATED
terminated unsuccesfully
PARTY : D1 - ADAIR DOUGLAS W

Or what about his abuse of the repeater system for which he was
spanked by the rain report?

N8WWM guilty of FCC violations. According to the FCC, N8WWM, Dog Adair
committed several violations over the air at the expense of the Toledo
Amateur Radio Club by utilizing their repeater to break the law. The
amateur club received a warning letter from the FCC concerning Adair's
violations and were told to take steps to make certain the violations
by Adair will not be repeated. Adair not only hurt the entire image of
amateur radio with his inexcusable behavior, but damaged the
reputation of yet another entity trying to further the good of amateur
radio. It's a shame when bad apples like these make it so clubs can't
even trust their own users to abide by the rules they were sworn to
uphold. Adair is also an infamous presence on the internet. A google
search of "N8WWM" reveals a peek into the world of the individual
identified as Adair. In addition to FCC violations, Adair has, in the
past, been accused of being a prolific spammer, breaking several
internet laws and violating several terms of service agreements with
internet providers.

1819. Amateur Radio Newsline™ Report 1405 - July 16, 2004

Newsgroup: rec.radio.cb
Date: 2004-07-19 02:04:02 UTC
From: radionews@aol.com
Message-ID: <20040718220402.02764.00000061@mb-m04.aol.com>
Source record: 184629

Amateur Radio Newsline™ Report 1405 - July 16, 2004

Here's a brief message from Amateur Radio Newsline's Support Fund Administrator Andy Jarema, N6TCQ:

"The following is an advisory. This is Andy Jarema, N6TCQ, Newsline Support Fund Administrator.
We'd like to thank everyone who helped us during our campaign in June, and we'll have the on-air
thank-yous in the next week or so. Don't forget that the Young Ham of the Year Award is coming
up in the next few weeks, so try to note our support address at the end of the newscast, as we're
not out of the woods, yet.

And now, as every week, the latest breaking news of Amateur Radio follows"

Amateur Radio Newsline report number 1405 with a release date of Friday, July 16, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The ARRL board of directors discuss BPL and other hot issues, it's still a go with ECHO and a
satellite TV company makes a costly move. The details are coming up on Amateur Radio Newsline
report number 1405 coming your way right now.

**

BPL AMONG HOT TOPICS FOR JULY ARRL BOARD SESSION

The American Radio Relay League's board of directors sits down for a weekend of critical meetings.
Amateur Radio Newsline's Mark Abramowicz NT3V has the preview...

--

Broadband Over Powerline internet access is one of the hottest topics on the ARRL board agenda.
It is likely BPL has been the subject of committee meetings leading up to the weekend board sessions.

Dealing with BPL issues is priority No. 1 for ARRL President Jim Haynie WB5JBP. Haynie tells Amateur
Radio Newsline in a recent interview, he expects the Federal Communications Commission will act soon

on the matter. While it's difficult to put a timetable on how soon, Haynie tells us he wouldn't be surprised to see the panel come out with a decision before the presidential election.

President Bush is solidly behind BPL as part of his broadband-technology initiative - this despite Haynie and the ARRL's plea for him to reconsider. Democratic challenger John Kerry's campaign position speaks of a variety of technologies for broadband but does not directly mention BPL.

Haynie concedes the way the political winds are blowing, some form of BPL activity is likely to be approved.

But the 64-thousand-dollar questions are: How much and where?

With the National Telecommunications and Information Administration already raising red flags about interference, and a BPL industry spokesman throwing verbal missiles at the amateur community, Haynie tells us here at Amateur Radio Newsline he's hoping some FCC commissioners might re-examine their BPL positions.

Haynie calls the recent suspension of the Alliant Energy BPL project in Cedar Rapids, Iowa, an important step. And, Haynie says, he suspects the electric utility industry will have to consider any fallout and who could be next to answer an interference complaint at the FCC.

As to complaints, Haynie says the ARRL will be especially vigilant if BPL becomes a reality. He says the organization will be before the FCC to press interference issues with those who are cause them.

And, he has told Amateur Radio Newsline, he will also press the FCC to fully empower those charged with enforcement issues in the agency to go after BPL providers who fail to resolve any interference complaints.

Among the other items on the board agenda, the status of amateur license restructuring which includes provisions for a "no-code" HF license for entry-level hams.

The July board meeting also is where the announcement of the winner of the Hiram Percy Maxim award comes along with host of other ARRL awards.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Check next week's Newsline for a report on the ARRL board happenings.

(ARRL, NT3V)

**

HAMSATS: ECHO TESTS CONTINUE

Testing of the newest ham radio satellite, ECHO, continues and all is, as they say in the space biz…
nominal. The remainder of this week is expected to be spent loading some new code, testing the S
downlink and the UHF B transmitter. Note that the S downlink, when in digital mode, will always be
at 38.4 kilobits or higher. It is not capable of 9.6 kilobits due to limitations involved in making
it work properly at speeds up to 76.8 kilobits. AMSAT is pleased so far with the strength of the
2.45W S downlink. At times the UHF A transmitter will be off or at very low power. They will also
be testing transmitters at higher data rates. Listeners should not be surprised or alarmed if the
UHF A transmitter is not on or if they are unable to copy it at 9.6k during some orbits.

The Command Team is carefully checking off the tests and measurements that are part of the commissioning
process. They ask everyone to be patient. And again, AO-51 is not yet open for use. Any transmissions
aimed at AO-51 by other than command stations will slow down the process and delay the day when it is
open for all to use.

The coloradosatellite.com/echo web site was off line for a few hours last weekend due to a data center
move. Stations who want to upload telemetry should find it on line now.

(WD0E, AMSAT)

**

SPACE: ARISS SCHOOL CONTACT LIST UPDATED

While we're on the subject of ham radio in space, the list of Amateur Radio on the International
Space Station, or ARISS, school contacts has been updated. To check if a school in your area is on
the list or to find out how to schedule a contact at your school please visit www.amsat.org or

http://ariss.gsfc.nasa.gov. There is no "www" in that last URL. Of course, these addresses will
be in the print edition of this week's Amateur Radio Newsline report.

(ARISS)

**
Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations
around the world including the Los Angeles Unified School Amateur Radio Association Network serving
the students in Los Angeles, California.

(5 sec pause here)

**

RADIO LAW: MDS & ITFS SPECTRUM RECHANNELIZED - MDS BECOMES BRS

Big changes are coming to the Multipoint Distribution Service and the Instructional Television Fixed
Service. These are better known by the acronyms M-D-S and I-T-F-S.

As part of its ongoing effort to promote the deployment of wireless broadband services, the FCC has
adopted a Report and Order and Further Notice of Proposed Rulemaking dramatically changing the rules
governing MDS and ITFS operations in the 2500-2690 MHz band.

For starters, the Order renames the M-D-S service the Broadband Radio Service or B-R-S. It does
however maintain the I-T-F-S label for Instructional Television Fixed Service licenses and operations.
The newly rechannelized I-T-F-S slash B-R-S band will group high and low power operations together
in spectrum chunks. This, the agency says, will make low power two-way data communications possible
in some parts of the band.

Finally, to make all this happen the band will soon become 5 MHz larger. This, as restructuring of
other services in the adjacent electromagnetic spectrum permits the FCC to extend the low end of
this band down to 2495 Mhz. (CGC)

**

RADIO LAW: FCC CLARIFIES ITS ROLE REGARDING INTERFERENCE AND CUSTOMER EQUIPMENT

The FCC has clarified its role regarding interference issues, consumer antennas and Part 15 unlicensed

equipment. Regarding antennas, we all know that consumers have the right to install and operate -
on property they control - antennas for over-the-air broadcast, terrestrial and satellite reception.
Now the regulatory agency has added license-free Wi-Fi antennas of one meter or less to the list of
what may be installed. The same one meter size limit also applies to antennas used in conjunction
with fixed wireless services that are licensed by the FCC.

In the area of radio frequency interference or R-F-I, the FCC says that it and it alone holds exclusive
jurisdiction over the regulation and resolution of R-F-I issues. It adds that regulation of R-F-I
phenomena shall be imposed only by the Commission noting that both the FCC and the federal courts
have overturned attempts by third parties to regulate RFI matters. This, in light of the FCC's
exclusive authority in this area.

To read more go to:
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1844A1.doc
(CGC)

**

ENFORCEMENT: CATV LEAK RESULTS IN $6400 FINE

A cable TV system in Cornersville, Tennessee has been fined for excessive signal leakage in the
aircraft communications band. Small Town Communications Partners has been ordered to pay $6,400
for excessive leakage on 121.2625 MHz.

At that frequency a maximum leakage of 20 microvolts per meter at a distance of at least three
meters from a CATV cable is allowed. The FCC says that the measured leaks in this case ranged
from 255 microvolts per meter to 2080 microvolts per meter.

The Commission notes that excessive cable TV leakage can interfere with a wide variety of communications.
This can include emergency services, aviation, and Amateur Radio.

More is on-line at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1751A1.doc
(CGC)

**

ENFORCEMENT: DIREC-TV FINED FOR UNAUTHORIZED SATELLITE MOVE

The Commission has proposed an $87,500 fine against DIRECTV, Inc.
This for repositioning its

DIRECTV 3 satellite without FCC authorization.

DIRECTV had filed a request with the FCC for special temporary authority to relocate the DIRECTV 3 bird, but admits that its employees began repositioning the satellite the next day, without waiting for Commission approval.

In setting the amount of the fine, the FCC noted that strict adherence to the rules governing modification of satellite authorizations is critical to minimizing the risk of collisions between satellites. (CGC)

**

FCC INTRODUCES NEW EXHIBIT ON HISTORY OF THE INTERNET

The FCC has introduced the third in a series of exhibits on the history of various communications technologies. The latest presentation focuses on the history of the Internet, including the communication technologies used to access the World Wide Web. More is on line at www.fcc.gov/omd/history (CGC)

**

ON THE AIR: THE .275 YOUTH GROUP NET

Timothy Little, W-8-L-B-O has announced the start-up of a new 40 meter 275 Youth Group. According to his posting on the Q-R-Zed dot com super site, this is an informal ragchew group that meets every Saturday at 9:00 P.M. Eastern time on 7 point 275 MHz, +/- 10 KHz.

Little says that the main purpose of the net is to promote the use of HF by younger hams so that they can get to know one another. The net also tries to help them perfect their operating skills including Morse code operation and D-Xing.

Anyone young or young at heart is invited to take part. More information about this net is on line at www.275youthgroup.4t.com)QRZ.com)

**

THE SOCIAL SCENE: NORTHERN ALABAMA DX BANQUET

The North Alabama DX Club has announced that its annual DX Banquet will be held in conjunction with this year's Huntsville, Alabama hamfest on August 21st. The

guest speaker will be Jess
Lewis, K-R-4-O-J, from the T-33-C 2004 Banaba Island DXpedition.
Tickets are $25 each and available
from the NADXC in care of Vic Holland, 219 Cedar Pond Drive,
Madison, Alabama 35757-7633. For
additional information phone 256-721-9106 or E-mail k4rvh@arrl.net.

CHANGING OF THE GUARD: ASCII DEVELOPER NOW S.K.

Bob Bemer, a computer pioneer who published warnings of the Y2K
problem in the early 1970s and
helped invent a widely used coding system, has died. This,
following a battle with cancer.

While not a radio amateur, Bemer played a major role in how the
world's computers operate and,
indirectly, in how hams communicate today. He began his career in
1949 working at companies including
Rand, IBM, and Honeywell. He also helped develop the ASCII coding
system that is used to represent
letters, numbers and other characters in the data world. He also
contributed the escape key and the
backslash to the computer language.

Bemer first published warnings of the Y2K computer problem in 1971
and again in 1979. He also made
several public appearances to discuss the issue in the years leading
up to the millennium.

Bob Bemer died Tuesday, June 22nd at his home some 120 miles west of
Dallas, Texas. He was 84. (Published news reports)

**

EMERGING TECHNOLOGY: FEW KNOW ABOUT DIGITAL TV

The General Accounting Office says that more than 80 percent of
Americans are either unaware or only

"somewhat aware" of the transition to digital television signals. But federal officials have
expressed shock and indignation at the survey results.

Congress plans to sell the analog spectrum that will become available when TV stations convert from
analog to digital. Lawmakers are counting on the money to help balance the budget. However, the
digital transition may be years away unless more consumers start buying digital TV sets and most
are not willing to pay the additional cost. (TechBriefs)

EMERGING TECHNOLOGY: CELL PHONE "WAITING LOT" IN OPERATION AT LINDBERGH FIELD

Following the lead of several other busy airports around the nation, officials at San Diego's
Lindbergh Field have opened a convenient "cell phone waiting lot." This is a place where drivers
can park for up to an hour while awaiting phone calls from arriving passengers. Airport managers
hope that the new lot will cut down on the congestion caused by vehicles circling the airport loop,
waiting to pick up passengers. More is on-line at http://tinyurl.com/yplws (CGC)

**

ON THE AIR: 6 METERS ACROSS THE ATLANTIC POND

It's looking like it could be a big DX season for hams and SWLs on both sides of the Atlantic.
GB2RS reports that during a Sporadic E opening on June 19th a path opened from Europe to North
America. The Maximum Usable Frequency rose at least as high as the FM broadcast band. A North
American station was received on and recorded at 88.5 MHz between 13:10 and 13:30 UTC. During
the event, trans-Atlantic television carriers were also received on 55.25, 61.25, 67.25 and
83.25 Mhz. (VHF reflector)

**

50 & ABOVE: 144 MHZ QSO DATA WANTED

If you've made any long distance 2-meter contacts in excess of 1,600 miles, or 2,600 kilometers,
Volker, DF5AI wants to know the details of your contacts. He's interested in the frequency, the
UTC time & date, and particularly the grid square locator. He's

also quite intrigued in double-hop
sporadic E skip. He can be contacted via his website. It's in
cyberspace at www.df5ai.net (VHF Reflector)

**

WORLDBEAT - ISRAEL: NEW SIX METER BEACON IN ISRAEL

4X4SIX is the new 6 meter Israeli beacon operating on 50.080 MHz.
4X6ON and 4Z5AY built the
station which announces its call sign on CW around the clock. The
beacon is located in grid
square KM72JB running 5 watts out to a J-Pole antenna. (Hagal)

**

DX

In D-X, the Ohio Penn D-X Newsletter reports that DL3PS and VE3ZIK
will be active on 40-6 meters
from Bilice, Croatia through July 31st. The call signs being used
are 9A slash VE3ZIK and 9A slash
DL3PS. While VE3ZIK is one of the Web Administrators for the
www.contesting.com info website, there
will be no QSL information there until August 3rd.

Meantime word that D-H-9-Y-A-T will be active portable CU7 from the
Azores. Listen for him from
August 3rd to the 20th. Activity will be on 40, 20 and 15 meters
QRP on CW. QSL this operation
via the bureau. (Various DX sources)

**

THAT FINAL ITEM: MUSEUM SHIPS CASTING FOR CONTACTS

And finally this week, dozens of ships from around the world
get "radio-active" July 17th and 18th
for the annual Museum Ships Weekend Event. Amateur Radio Newsline's
Mark Abramowicz, NT3V is back
with us and he checks in on preparations being made about the U.S.S.
New Jersey....

--

Dave Burgess, WA2TVS, is chief engineer for the Battleship New
Jersey Amateur Radio Station aboard
the New Jersey. Look for NJ2BB (New Jersey 2 Big Battleship) to be
very active during the event.

Burgess says the weekend was the brainchild of the USS Salem Radio
Club, K1USN, in Salem, Mass.
He says it actually started in 1997 as a way to get museum ships at
dry-docks around the world to

get on the air by way of amateur radio.

Burgess says it's the New Jersey's third year taking part.

"Last year, the number grew to about 87 or 88," Burgess says. "Right now I think the pre-registration right now is about 77. But seems like there's always a half a dozen or so right at the last minute that get their act together and get on the air."

Burgess says the event gives radio operators around the world a chance to contact a variety of these special ships and their volunteer crews.

"One is just to have fun and a reason to get the ships on the air," Burgess says. "Of course, whoever is in charge of taking care of the ship gets some PR out of it, we hope.

"They have an opportunity for the public to see amateur radio which is new to a lot of people. But to advertise the ships worldwide. I never knew there were so many ships out there. Just museum ships that is. It's amazing how many there are out there and what their diversity is."

Burgess says there are tugboats, river boats, submarines and even a midget German submarine left over from World War II. All are part of the museum ship flotilla.

He says there's no contest exchange involved in this one. Ship operators get on the air and look to contact land-based stations as well as other museum ships. It's a chance, Burgess says, to showcase a ship and its history. And, of course, there's an exchange of QSL cards and you can be guaranteed some pretty impressive history and photos of the ship you contact.

For the New Jersey's part, Burgess says he's planning an active weekend with operations through the evening of July 18th.

"We'll be on all HF bands, probably concentrating on 20 (meters), but we have capabilities (with the) ship's antennas to do 160 through 10 meters," Burgess says. "We'll be on all modes. This year we'll be introducing true, green-key operation for teletype. We'll be using the ship's old mechanical teletype machines to get on the air."

Look for NJ2BB, Burgess says, for a memorable QSO and QSL.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Camden, New Jersey, the home of the

Battleship New Jersey.

--

Thanks Mark. This sounds like a great opportunity to collect some very interesting "wall paper" for
the ol' shack.

Of course not.

A bit of constructive criticism: I don't even bother to read your
posts anymore. Almost everything you write has something to do with
your flame war with that troll. The only reason I read this one was
because you pinged me in the subject line, but I probably wouldn't
have even done that if it wasn't raining outside (been working on the
boat).

Source record: 184634

Hi
Here is what I just got, Cobra 29 LTD Classic that was bumped up a bit, a new Palomar Elite 300 amp (ebay) , Diesel (?) noise canceling mic and a Wilsom 5000 mag mount ant.

I cant get the SWR down below 2.5. I ran a new 18' cable and a ground wire to the frame of the truck but ever time i key up the ANT light lights up on the radio.

My questions are:

1. How can I get the SWR down?
2. Is this a good combo?
3. on my amp it has a ON/OFF , HIGH, MED, LOW and a PRE-AMP on and off. What is with the PRE- AMP.

Ok I know I will take a beating from some of you and that is part of the game but any help or any suggestions would be great.

Thanks
Rock

>My questions are:
>
>1. How can I get the SWR down?

Just three words: Grounding, grounding, and grounding. You need to
ground the radio AND the amp AND the antenna. By "grounding" I mean an
"RF ground". At 27MHz, this means mounting the radio and amp directly
to the chassis and/or using grounding straps that are no more than a
few inches long. Only after your system is properly grounded can you
address any other issues. And those other issues can be many. For
example, your 'bumped' Cobra may have been 'bumped' by a moron; your
Palomar may have a detuned input or output, a bad power transistor, or
even worse it might be self-oscillating; you might be using cheap coax
(never use foam!); you might have a bad antenna; etc. But regardless
of the problem, it's always easier to troubleshoot if the system is
properly grounded.

>2. Is this a good combo?

Not really. The makers of these cheap linears (that usually aren't
very linear at all) don't tell you that the power rating is for -peak-
power. IOW, a 300-watt amp will do 300 watts PEP, which translates to
a maximum of 75 watts RMS (AM carrier power). Push it any harder and
you will get a bigger carrier, but you start clipping well below 100%
modulation, splattering your signal across the spectrum. You should
have had your Cobra 'dumped' instead of 'bumped'. As for a mag-mount,
personally, I wouldn't waste my money. But you have, so you should
know that 18' of coax isn't a reliable substitute for the terrible
grounding characteristics of mag-mount antennas. If you want real
power you need a real antenna, not a glorified refrigerator magnet.

>3. on my amp it has a ON/OFF , HIGH, MED, LOW and a PRE-AMP on and off.
> What is with the PRE- AMP.

The pre-amp is used to amplify the received signal. They are mostly worthless because the signal-to-noise ratio of modern radios is usually much better than the S/N ratio of the pre-amps. IOW, they will just make the noise louder. However, they work great for older and low-end transceivers, and simple homebrew receivers.

>Ok I know I will take a beating from some of you and that is part of the game
>but any help or any suggestions would be great.

Here's your beating: If you want to play 'hammie', get a license. If you can't afford a license (about the price of a happy-meal), or if the test is too difficult (even when you are allowed to memorize the questions and answers before the test), then at least get yourself a book on the subject and learn what you are doing.

>Thanks

I'm building this inside-out -- first is the sub-frame for the engine
(20HP diesel), gearbox, generator, etc. When that is done then I will
be able to make a guesstimate for the displacement of the hull, which
will determine the overall size. But I'm shooting for 27' with a 9'
beam to make it trailerable without a permit.

>Are you familiar with Sea Swirl boats?

Never heard of them. Got a link?

Wow, that's a pretty big one. I thought you meant a dingy sized novelty
toy. Will you have to build a custom trailer too, or will a regular
bunk style boat trailer work?
>
> >Are you familiar with Sea Swirl boats?
>
> Never heard of them. Got a link?

Yea, they're not paddle-wheeler's tho..I bought this one new in 89
for fishing Lake Erie and am considering selling it, since the invasion
of salt water cast off's has mostly ruined walleye and perch fishing as
I've enjoyed it over the years.

>Why would anyone want to bring Jerry back?

Worrying about waht others do and want has reduced you to nothing but a
quivering mound of jello.

>A bit of constructive criticism:

You've never been able to manage constructive criticism. Never. Your
massive deficit in communications will not permit it.

>I don't even

>bother to read your posts anymore. Almost

>everything you write has something to do with

>your flame war with that troll.

(Yea, sorta like your volleys with Twist. (see your sig)

>True story.

Of course it is. You're a hypocrite in addition to being forced to admit
you're a liar.

> But sorry,

Yes, you most certianly are, but no need to apologize for it. Attempts
at disclaimers are worthless coming from yourself.

>I usually turn off the sig if I'm not replying to

>Twist or one of his sock-puppets.

But,,,,you didn't. Once again, like the boorish reduced clown you have
become, you take someone to task for doing the exact same actions you
continue to perpetuate and foster upon this group.

>The only reason I read this one was

>because you pinged me in the subject line, but
>I probably wouldn't have even done that if it

>wasn't raining outside (been working on the

>boat).

(giggle) Feeling committed to the point that you must offer your Twisted reasons for what you do and why you do it is your problem. None give a damn if you read their posts or not. You're a nobody. Telling another you no longer read their posts is your personal issue to work on, not theirs.
Which of the multitude of identities are you attaching to me today, oh impotent and fascist Frank? LOL. Frasso? McCambell? Lenny? Dave from S. Florida? Roger in West Va?
Why not make a webpage showing your hate and discontent for Wile E. Coyote or Yosemite Sam? You still don't get it.....the joke is in your mirror but as long as you are willing to be the poster child for how-to-be-a-marionette, there are puppetmasters who will continue to oblige and take advantage of your weakness and ignorance. Shoot, you don't even have a clue who you're so angry with anymore, OM, let alone who is tweaking you as you slip from the wagon and fall back into the alcoholism that wrecked your life. Sit, Frank, and let a smile be your umbrella to shield you from that dark cloud you just can't seem to shake from hovering above your chuby self. It's really not a conspiracy against you and the world doesn't really hate you and it's not always unfair to you,,it just seems that way because of your anger issues and inability to get past yourself stemming from such a low self-esteem.

>funny..

I voted once and skipped the fascist question about banning anyone. I want no one banned,,,,the only people in this group that want anyone banned from usenet are those who spoke of it in the past, the fascist lids of the group...,N8WWM (self-explanatory) ,
Gillinad (Forced to admit he is the frequent liar of the group. Pleaded and tried to implement his own self-censored usenet cb group with himself as moderator where there would be no talk of any items he disproved of, such as amplifiers, mods, peaks and tweaks, dx, freebanding and conversions. appointing himself as moderator. Predictably, he had no takers). Maintained Popular Communications had "no journalistic integrity" for running an article explaining what a keydown was.

KC8LDO (promotes acts of violence, death, and injury against freebanders),

WA3MOJ (hostility is his name, insanity is his game, what more does one need to know?) and
N3CVJ (Admitted Socialist and confused Extra, fancies himself a matchbook psychiatrist, claims society is on verge of anarchy. Claims proof is reflected in the behavior found on his cb radio. Bases his observations on personal emotion. Lies often, gets caught often. Insists he is owed explanations "justifying" others actions by mere possession of his hammie ticket. Has argued in the past is due respect simply because he has a hammie ticket.

>I will tell you what is fucking funny.

Well, you can certainly try, but what we find funnny and what you find funny is obviously two entirely different things. If you grasped what most were actually laughing at, you would become educated.

>That web

>site was set up for the purpose of attracting

>these keyclowns and tracking their IP's. The

>whole thing of it getting out of control and the

>vote being hijacked was planned for as well as
>my complaining about it.

You really are insane. Amazing that you are so decidedly constructive
with your time, and at your age. Incredible.

>The result - top secret sock puppets of Twist,

>Shark, Steveclown and Randy Crackhead

>have been positively ID'd.

LOL! Top Secret? Oh boy!! Has your decoder ring assited in this
impotence? My IP is webtv...always has been,,you didn't need a decoder
ring for that...you could've just asked,,,,,,,,anybody. LMAO! Is that
positive ID anything like McCambell, Frasso, Roger, etc, etc,? Ah,,never
mind,,,I kinda enjoy you in super-spaz mode!

Perhaps someone from the FCC will educate and enlighten you. The free exchange of such information is completely legal and the FCC has no governing authority over such. High school grads know such things.

From: scott@somewhere.else (Scott in Baltimore)
I will be on channel 37 USB at 1:00 PM EDT today. I will remain for 15
minutes in case anyone wants to give a shout. For you VHF enthusiasts,

>Damn. I missed you by 32 minutes.

Aw, Dude,,the skip was AWESOME all weekend,,,,,this side of the state
was DRENCHED all weekend,,,had one of those tropical wave depressions
with high winds and lots of water coming down,,,,weird,,,the skip and
the fishing were out of this world. Grouper and snapper all weekend
long,,,,,,INSHORE. Early Saturday morning Tazmania was on 38 low,,,,,did
it BAREFOOT from the port. All day Saturday the stateside skip was
running hot! Got Maryland on Sunday on 38 low, with plenty of Michigan,
Ohio, Indiana, Virginia, Pa, WV, Tn, Ky, and NC. The afternoon on
channel 6 yielded similar results. 813 portable from the pile was
getting out. I talked to Cleanup Man and one or two others and went back
to 38 low.

220 HP? YIKES!!! That's a fishing boat for serious competitions! You
would have a blast with that out on Puget Sound.

The velocity factor has nothing to do with performance, and the
difference in loss is insignificant unless you plan on running several
hundred feet. What -is- significant is that foam is easily ruined by
mild heat, moderate bending or crimping, and humidity that gets
trapped inside. Foam is a poor choice for mobile installations.

Actually a GOOD question.....make sure you use HEAVY wire to the ground point, lightning will blow to pieces "small" diameter wire. #6 works very nicely, flattened RG-8 (or RG213) coax (middle removed) works nicely too.

Ok im going to ground the radio and the amp tonight. starting with the antenna, what should I replace the wilson mag mount with. I went with the mag mount due to parking in a car port. that way i could pop it off and set it in the bed of my truck. I wont lose any sleep over dumping the wilson but what shoud I get. I plan on upgrading every thing now but I would like to start with tha anyenna and then move on to radio. one thing at a time $$. It looks like I wasted money the first time around I would like to get it right this time.

thank agan

Rock
by the way I was stationed in Miomar San Deigo and 29 palms.

Most "tune-ups" involve stretching the coils that make up the low-pass filter.
A watt meter reads all wattage, no matter what it's frequency.

Now your amp and antenna reject the second harmonic and reflect it back to the radio.

> I cant get the SWR down below 2.5. I ran a new 18' cable and a ground wire to

What you failed to mention was the SWR with the amp out of line.

-Scott, with the KW-7 really mounted to the rear bumper, and a 1.5:1 SWR that TALKS.
I still prefer resonance to perfect SWR! Oh yeah, 7 feet of coax...enough to make it from the box to the antenna mount. No crimped connectors here. 2x455 box fed by #6.

I stripped 1/2" of the insulation from my coax 3 feet from the mount, soldered some heavy wire to the braid and attached it to a solid ground. This is in addition to the mount. If there is any current on the outside of my shield, I don't know it anymore.

A flat copper bar with holes drilled in it makes a great ground block, as long as it's attached to a good ground. Use star washers for maximum effectiveness.

If you have a roll-bar or utility rack you can weld a bracket at the
top, then use just about any type of whip with a quick-disconnect
mount. For top-mounted antennas I prefer center-loaded whips, but
others like fiberglass and they work fine, too. Or, if you really want
top-notch performance (in -both- Tx and Rx) you might try a full-sized
9' whip on the rear bumper and tie it down when not in use. I have a
9' whip mounted on the center of my roo-guard in the front and tied
back so it doesn't catch on the brush. Anywayz, the 9' whip shouldn't
cost you much more than $20-$30 for both the whip and mount. On the
places where the antenna mount contacts the metal of the vehicle, make
sure it's contacting clean, bare metal and makes a GOOD connection.
For coax, get some RG-8 or better and avoid crimp connectors. If you
have a soldering gun, learn to solder them yourself. It's ok to use up
some coax to practice soldering these connectors because the results
are worth the effort.

> It looks like I wasted money
>the first time around I would like to get it right this time.

Nothing was wasted. It's always good to have a backup. Keep the old
mag-mount for emergencies.

Far out! I was in Stumps for C&E from late '81 to early '83!

Do you think totally flat is really what you want? You will experience
boat wakes and semi-rough water from time to time. Maybe a slight vee
at the keel might be a consideration? You'd still have your flat platform
on top..not telling you what to do, just throwing stuff out for
conversation.

Flat is fine since this is nothing more than a self-propelled barge.
Draft is probably going to be less than a foot. And I have already
found myself four big ballast tanks should the water get too choppy.
Check this out:

I've never heard of a semi-planing paddle-wheeler, but I suppose I
could put a slight V under the forward 8 feet. However, the ballast
tanks are there for more than stability. There are some serious winds
through the gorge and the ballast will help prevent too much drift.
Also, there are lots of sandbars on the Columbia -- if I get stuck I
just dump the ballast and float off the bar. I've also been toying
with the idea of a dual-hull design -- "paddling the cat"?

Hey that's another idea..cat hulls are real stable in rough water. You're
not gonna get that tank on plane with a 20 horse anyway. I'm just trying
to consider drag, plowing, and bow splash..

You know it! I actually caught some short skip driving home from the
mountains last week. Some kid in Minneapolis running legal on a base.
When skip is there, 2 watts is all you need!

That's all. You only need 20 hp or less to navigate too!

Actually, the V-bow is a pretty good idea. It should make a difference
when steering at dead-slow speeds. I thought about that problem before
and my solution was to build a side-wheeler, but I gave that up after
thinking about how to fit it on a trailer.

I'll pass on the cat cause that would increase the draft.

.....hmmmm, let's see now..... 1 HP = 746 watts..... hey, this will be
a 15kW paddle-wheeler!

I think the vee front is worth considering, especially if you ever end up sitting in the front without a wet suit..steering would be improved that way too, like you said.

Looks good on paper anyhow. I think there's a yahoo group for those paddle-wheel boat models. Might be worth a 1/40 bathtub prototype.

Don't drop the soap!

>
>Don't drop the soap!

The soap stays on the rope when you use CAD. Ran a few variations on the V-bow theme and most came out the same -- the bow pitched down almost to the water line. I also tried a shallow V-bottom for the full length of the hull, but it wobbled like a weeble whenever the load was light and unbalanced (walk from side to side and the whole boat rocks on the fulcrum of the keel). It also slowed the max hull speed by almost 15% with full ballast. I think I'll stay with the scow-bow for now. That is, unless someone has figured out how to build retractable side-wheels....

On 19 Jul 2004 05:01:36 GMT, rochusmc@aol.com (ROCH USMC) wrote in
<20040719010136.05916.00001968@mb-m05.aol.com>: *Hi
*Here is what I just got, Cobra 29 LTD Classic that was bumped up a bit,
a new Palomar Elite 300 amp (ebay) , Diesel (?) noise canceling mic and
a Wilsom 5000 mag mount ant.
I cant get the SWR down below 2.5. I ran a new 18' cable and a ground
wire to the frame of the truck but ever time i key up the ANT light
lights up on the radio.
My questions are:
1. How can I get the SWR down?

>Just three words: Grounding, grounding, and

>grounding. You need to ground the radio AND

>the amp AND the antenna.

The antenna is already grounded. A Wilson mag mount needs no additional
ground.

>By "grounding" I

>mean an "RF ground". At 27MHz, this means

>mounting the radio and amp directly to the

>chassis and/or using grounding straps that are
>no more than a few inches long. Only after

>your system is properly grounded can you

>address any other issues.

Nonsense. One can mount the radio in a slide mount and to make it
temporary or it can be mounted in a permanent manner. It can be mounted
to the dash and a myriad of other places. The radio does not need
directly mounted to the chassis in order to provide proper grounding. In
fact, this is less practical and not the manner of which the majority of
cb installs are complete.

>And those other issues can be many.

Almost as many as there are ways in which to mount the radio other than
mounted directly to
the chassis.

>For example, your 'bumped' Cobra may have

>been 'bumped' by a moron; your Palomar may
>have a detuned input or output, a bad power

>transistor, or even worse it might be

>self-oscillating; you might be using cheap coax
>(never use foam!); you might have a bad

>antenna; etc. But regardless of the problem,

>it's always easier to troubleshoot if the system

>is properly grounded.

*2. Is this a good combo?

>Not really.

Sure it is. Palomar amps work quite well.

>The makers of these cheap linears

>(that usually aren't very linear at all) don't tell

>you that the power rating is for -peak- power.

LOL,,umm,,that's how amps are rated.
You used the term linear, he called it an amp.
One that is familiar enough to add new coax to a Wilson is more than likely already aware of this.

>IOW, a 300-watt amp will do 300 watts PEP,

>which translates to a maximum of 75 watts

>RMS (AM carrier power). Push it any harder

>and you will get a bigger carrier, but you start

>clipping well below 100% modulation,

>splattering your signal across the spectrum.

Watts are watts, regardless of how they are measured. Refer to them as RMS, PEP, or BIRD, as you have in the past...watts are watts. With many radios, the blue faced palomar 250 are will sing 100 watts all day long without bleeding and they are very cheap.
You also appear to be incorrect pertaining to modulation, as there are many instances pertaining to cb, when one wishes to achieve loudest optimum modulation, a power mic is required. Many times, this can cause the bleed over to begin. Remove the power mic in many applications, and the bleed can often be removed. I don't expect you to follow, Frank, you're still smarting after having your head handed to you after making the stupid comment that fiberglass antennas can have nothing to do with bleed issues.

>You should have had your Cobra 'dumped'

>instead of 'bumped'.

That's a personal opinion coming from one who doesn't know any better
and bases his technical advice on nothing but personal emotion. Slight
peaking and tuning is perfectly acceptable when done by a competent
technician. In fact, Many cb radios can use a tune-up alignment after
being shipped.

>As for a mag-mount, personally, I wouldn't

>waste my money.

Again, you don't know any better. Many of us have talked around the
world on mag mounts, barefoot, on a regular basis. Mag-mounts are great
solutions for temporary mounts, rental cars, quick disconnects, etc.
Money spent on a Wilson is not wasted.

>But you have,

Again, a perjorative personal opinion of yours. Lockheed Martin proved
the efficiency of the Wilson in independent tests. You should check
their test data and you may grasp why they are so popular and have
legions of loyal customers,,,they make a tight product that delivers
what they claim.

>so you should know that 18' of

>coax isn't a reliable substitute for the terrible

>grounding characteristics of mag-mount

>antennas. If you want real power you need a

>real antenna, not a glorified refrigerator

>magnet.

"Real" is a relevant term. The Wilson will have no problem with the
amplifier he is using.

–

*3. on my amp it has a ON/OFF , HIGH, MED, LOW and a PRE-AMP on and off.
  What is with the PRE- AMP.

>The pre-amp is used to amplify the received

>signal. They are mostly worthless because the
>usually much better than the S/N ratio of the

>pre-amps. IOW, they will just make the noise

>louder. However, they work great for older and
>low-end transceivers, and simple homebrew

>receivers.

The pre-amps are worthless by no means. They work absolute wonders when the needle is flat with no noise for those extreme fringe stations. I've used a cheap pre-amp on a regular basis to talk to the east coast of Fl late at night,,,BAREFOOT.

*Ok I know I will take a beating from some of you and that is part of the game but any help or any suggestions would be great.

>Here's your beating: If you want to play

>'hammie', get a license.

Running an amp isn't "playing hammie" to all, just to those anal retentive status starved individuals.

>If you can't afford a license (about the price of

>a happy-meal), or if the test is too difficult

>(even when you are allowed to memorize the

>questions and answers before the test), then

>at least get yourself a book on the subject and
>learn what you are doing.

Seeing as he can solder and change out a coax on a Wilson, it appears he is learing what he is doing quite fine. If one wanted a hammie license, I am certain one would find that information if that is what they were seeking.
With all the bullshit you have given this dude, he may run like hell from anything hammie related, merely because someone like yourself is advocating it, and he wouldn't be blamed for doing so. It's just the manner in which you come across to all those you can't understand.
-
*Thanks
Rock

HAHHA,,,absolutely amazing,,this dude posts via aol early in the morning wee hours when there are no other posts being made via AOL, but bypasses AOL and goes out of his way to sign up with google to make his post....and before the post can show up on most servers, Gilliland answers. Add to that the guy is getting rid of his Wilson because the first person he came across on usenet told him it was no good? The dude can change out and solder a coax connection but doesn't know how to set his swr and needed Frank to instruct him? HAHHAHAHHAHAHAHAHAHHAHHA! Frank's self-esteem is the only thing taking a "beating".

this info has been forwarded to the FCC.
ham op

_
Perhaps someone from the FCC will educate and enlighten you. The free exchange of such information is completely legal and the FCC has no governing authority over such. High school grads know such things.
-
Just because it's a small amp doesn't mean it sucks. Everyone doesn't need huge watts to get around the world.....I've been a huge proponent of low power worldwide dx for years.
I hardly think think the FCC would be interested in these plans merely because your opinion says the amp sucks. Besides, why does it suck? Is the bias off? What radio did you try this amp with? Did you try and put the amp together and run into problems? The plans have been implemented by many operators, which is why they continue to be a popular offering.

>The antenna is already grounded. A Wilson mag mount needs no additional
>ground.

A magnet isn't a any type of electrical connection at all. Some have
been duped into thinking there's a capacitive coupling between the
magnet and body through the paint, but fail to realize that the magnet
itself prevents any capacitive coupling. That's why most mag-mounts
come with 18' of coax yet frequently show high SWR. And unless the
antenna is a dummy load, you can move the cable around and watch the
SWR needle wander.

Fact: Mag-mount antennas have piss-poor ground connections.

>>By "grounding" I

Nobody said it couldn't. A slide mount is fine if the receiver half is
mounted to the chassis (or with a very short grounding strap).

> It can be mounted
>to the dash and a myriad of other places.

Strip the plastic and vinyl from the dash, and behold... the chassis!
The chassis also exists in a "myriad of other places".

> The radio does not need
>directly mounted to the chassis in order to provide proper grounding. In

>
>
>*2. Is this a good combo?
>
>>Not really.
>

>
>Sure it is. Palomar amps work quite well.

When fed with the correct input levels. A radio that has been 'bumped'
(which I assume to mean it has been tweaked for more power) may easily
exceed the maximum input levels for the amp. Even 4 legal watts will
overdrive most of the smaller amps.

>>The makers of these cheap linears
>
>>(that usually aren't very linear at all) don't tell
>
>>you that the power rating is for -peak- power.
>
>
>
>
>
>LOL,,umm,,that's how amps are rated.
>You used the term linear, he called it an amp.

Unless his Cobra is capable of FM, your point is moot.

>One that is familiar enough to add new coax to a Wilson is more than
>likely already aware of this.
>
>
>>IOW, a 300-watt amp will do 300 watts PEP,
>
>>which translates to a maximum of 75 watts
>
>>RMS (AM carrier power). Push it any harder

>
>
>Watts are watts, regardless of how they are measured. Refer to them as
>RMS, PEP, or BIRD, as you have in the past...watts are watts. With many
>radios, the blue faced palomar 250 are will sing 100 watts all day long
>without bleeding and they are very cheap.

A common misconception, hence the frequent and continuing occurances
of RFI, and the increasing popularity of LP filters.

>You also appear to be incorrect pertaining to modulation, as there are
>many instances pertaining to cb, when one wishes to achieve loudest
>optimum modulation, a power mic is required. Many times, this can cause
>the bleed over to begin. Remove the power mic in many applications, and

>the bleed can often be removed. I don't expect you to follow, Frank,
>you're still smarting after having your head handed to you after making
>the stupid comment that fiberglass antennas can have nothing to do with
>bleed issues.

CB radios have modulation limiters which prevent modulation from exceeding 100% (usually set for 90-97%). A power mic may clip and distort the audio, and if that happens just turn down the mic. But if the limiter has been disabled (as some monkey-techs like to do, one of their stupid "CB tricks"), the result is that the RF will start clipping and/or become unsymmetrical, both of which cause harmonics and 'splatter'.

And overdriving an amp is ALSO a cause of harmonics, as I described before. Cheap CB amps like the Palomar are rated in watts PEP, even though they don't specify them as such. The way to tell is to look at the spec sheet of the power devices (transistors) and find out how those are rated, which is usually for PEP. That is the case for the Palomar in question. The difference is that AM is measured in RMS. With an AM radio that does 4 watts RMS (which is also the carrier power), it outputs 16 watts PEP at 100% modulation. So if your AM radio is driving your 300-watt amp to 300 watts carrier -without- modulation, the result is some big-time distortion because the amp is incapable of meeting the 1200 watts PEP requirement for an AM signal at 100% modulation.

>>You should have had your Cobra 'dumped'
>
>>instead of 'bumped'.
>
>
>That's a personal opinion coming from one who doesn't know any better
>and bases his technical advice on nothing but personal emotion. Slight
>peaking and tuning is perfectly acceptable when done by a competent
>technician. In fact, Many cb radios can use a tune-up alignment after
>being shipped.

Most experienced ampheads have their radios 'detuned' for -lower- output power to prevent overdriving the amp. That's a fact, not my personal opinion.

>>As for a mag-mount, personally, I wouldn't
>
>>waste my money.
>
>
>Again, you don't know any better. Many of us have talked around the
>world on mag mounts, barefoot, on a regular basis. Mag-mounts are great
>solutions for temporary mounts, rental cars, quick disconnects, etc.
>Money spent on a Wilson is not wasted.

It is to me because I don't need temporary mounts. If I want to remove
the antenna I just unscrew it. And I don't rent vehicles, I buy them.

>>But you have,
>
>Again, a perjorative personal opinion of yours. Lockheed Martin proved
>the efficiency of the Wilson in independent tests. You should check

1924. Q: Replacing RF inductors?

Newsgroup: rec.radio.cb
Date: 2004-07-21 03:15:52 UTC
From: COBRA_STRIKE <dsingram@tds.net>
Message-ID: <40fddf60_3@newspeer2.tds.net>
Source record: 184734

How am I able to replace RF inductor coil(s) [the ones that have that wax covering over them to keep "sticky fingers" from turning them;) with another one that will work.

I am asking this because:
1. I am looking to replace a couple of inductor coils;

2. I need to learn how to take it upon myself to learn how to repair for my own experience. I'm not doing this for $$ income, just seeing what I can find to boost my knowledge on these things.

3. I am sure someone out there has had this on their mind as well as I do.

4. Even though I am a licensed Ham, I am in no way doing ANY illegal mess; just repairing them to bring them back online so someone who just wants one to talk on can get some good use out of it.

5. I have some CBs that need a good refit and I am looking for some good references on how to bring these radios that I find at Flea Markets like the one in Danville, VA and Hamfests like the "FrostFest" in Richmond, VA.

Tnx.

Sean

<snip>

Search the net for a program called "HAMCALC" by VE3ERP. It has a coil
designer program plus a jillion other nifty things, and lots of other
very useful info.

1929. FS HF radio Icom IC720a with matching power supply

Newsgroup: rec.radio.cb
Date: 2004-07-21 13:57:47 UTC
From: edgrimly@hotmail.com
Message-ID: <bfc05d2.0407210557.73aff4f1@posting.google.com>
Source record: 184739
Cross-posted to: rec.radio.swap,rec.radio.cb,rec.ham-radio.swap,rec.radio.amateur.equipment,mi.wanted

I am looking to sell my beautiful Icom IC720a
This HF (high frequency) Ham/Amateur radio comes with matching power supply and desk mic.
It works great and I have used it to make contacts and recieve SSTV and other digital modes. With the correct antenna (and the will to do so..) it will even do C.B. frequencies.
It also comes with the manual.
This is from a NON SMOKING home so no yellow tinge or smoke smell in the mic.. ;)

See this web page for a nice listing of specs and pictures
http://www.qsl.net/sm7vhs/radio/icom/ic720a/ic720a.htm

Only reason I am selling is because my son wants to get into Quarter Midget Racing and we need the money for safety equipment and a car.

I would like $350.00 for it and it is located in Central Lower Michigan

Ed

| I have a JC Penney 6247, which is like the Colt Black Shadow SSB radios.
It
| has channels up to 28 MHz and down to 26.455 MHz. The problem is that it's
| really difficult to tune it for all the channels. I end up losing power on
| the high and low end. If it's tuned to span the entire bandwidth better, I
| lose power on the entire band down to 8 or 9 watts SSB. I did a mod on a
JC
| Penney 6241 (completely different) that fixed this completely. I removed
one
| of the rf transformers where there were 2 in series. I don't remember the
| rest of the details on it as it has been a very long time ago. I did the
| same thing on a President Washington. Does anyone remember how this is
done?

Amateur Radio Newsline™ Report 1406 July 23, 2004

Amateur Radio Newsline report number 1406 with a release date of Friday, July 23, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Two important youth awards are made and one Georgia ham shares in both of them. Find out who on Amateur Radio Newsline report number 1406 coming your way right now.

(Billboard Cart Here)

**

ANDREA HARTLAGE, KG4IUM, NAMED ARNEWSLINE(TM) YOUNG HAM OF THE YEAR

Andrea Hartlage, KG4IUM, has been named 2004 Young Ham of the Year by the Amateur Radio Newsline. And since this is a story about the success of the younger members of the hobby we asked our 2002 Young Ham of the Year, Josh Abramowicz, KB3GWY, to bring us the rest. Josh:

--

It was only a few years ago that I got a call at the Hawk Mountain Scout Reservation in Schuylkill County, Pennsylvania, telling me to call someone from Amateur Radio Newsline. It was during that phone call, that started out as an interview, I learned of my nomination and selection as the Young Ham of the Year.

Andrea, it turned out, was with her grandparents on vacation in Florida at the time she got the call on a cell phone from Amateur Radio Newsline's Bill Pasternak, WA6ITF. Here's her first reaction after getting the news:

"I'm very happy and excited."

Andrea, who earned her Extra Class license at the age of 14 - less than a year ago , was first licensed in 2000. She's 15 years old and going into her sophomore year at Grayson High School in Grayson, Georgia, north and east of Atlanta, where she's an honor student.

Andrea has been quite active since getting her ticket just four years ago.

"I do a lot of public service with parades and different types of marathons and things like that," she says. "I write the youth column for ARRL website. The Youth@HamRadio.Fun column. I'm assistant section manager for youth of the Georgia section and I'm a member of several local radio clubs."

Andrea is proud of her ham radio activity and is promoting the Amateur Radio service among youth.

"I spoke briefly at the Youth Forum in Dayton and I also led a Youth Forum at the hamfest, the local Rockville hamfest, and I also helped put hamfests on with the Alford Memorial Radio Club," she says.

She's also part of the ARRL's Big School Project and serves as a leader and teacher at the Richards Middle School Amateur Radio Club. There, she teaches electronic theory and has come up with a series of fun games to help reinforce the lessons.

So how did Andrea get started in Amateur Radio? She credits her father with kindling her interest.

"My dad interested me, he introduced it to me, Scott Hartlage, KF4PWI and he introduced me to Amateur Radio - I guess it was four years ago," she says. "I just sort of got interested in the public service side and I also serve as net control and I enjoy doing that and all the other things."

Andrea says Amateur Radio and all the opportunities it has given her, also has opened her eyes to some career possibilities.

"I'm possibly thinking about some kind of journalism and writing these (ARRL) columns helps me develop writing skills," she says. "And, I'm also thinking about some type of communication field that I really enjoy, like, for example, serving as net control and learning how to communicate effectively."

Andrea has made quite an impression on hundreds and hundreds of people already. You can bet it won't be the last time we'll hear from her, now and in the future.

From the 2002 award winner - Congratulations, Andrea, the 2004 Young Ham of the Year.

For Amateur Radio Newsline, I'm Josh Abramowicz, KB3GWY.

--

Andrea Hartlage, KG4IUM, will get her award at a special ceremony on Saturday, August 21st at the Huntsville Hamfest. In addition to a plaque from Amateur Radio Newsline Andrea will receive a gift of Yaesu brand ham radio gear from Vertex Standard and a week at Spacecamp courtesy of CQ Magazine. Vertex Standard and CQ are both major corporate underwriters of the Young Ham of the Year Award program. (ARNewsline (tm))

**

ANDREA HARTLAGE, KG4IUM AND JAY THOMPSON, W6JAY, NAMED TO RECEIVE HIRAM PERCY MAXIM AWARD

At almost the same time that Andrea Hartlage was getting word that she had been named as Amateur Radio Newsline's Young Ham of the

Year
she was also hearing good news from the American Radio Relay League.
So was our 2003 Young Ham of the Year Jay Thompson, W6JAY.
Here's
Amy Abramowicz, KB3IJW, with more:

--

Both Andrea and Jay learned the ARRL's board of directors had selected them to receive the coveted Hiram Percy Maxim Memorial Award.

The ARRL board was so impressed by the nominations for each that they decided to give both of them the award. That means a cash prize of $1,500 each and a special plaque.

Amateur Radio Newsline spoke with ARRL President Jim Haynie, W5JBP. He says there's no doubt Andrea and Jay are the brightest stars among the young hams today.

"Both are just absolutely stellar examples of Amateur Radio and the young crowd that we're trying to encourage at the League," Haynie says. "You couldn't pick anybody any better than these two. And, I'm just amazed at their accomplishments and how they've managed to be so professional in all the things they've done.

"I've read some of their papers and when we chose them as the HPM award winners, what they had accomplished in their brief careers as amateur radio operators. The only thing I would say to young people is use these two people as examples because they are the best. They are the best of the best. And, speaking as president of the League, I congratulate them both and I admire them both because of what they've managed to do."

Mister Haynie also tells us the 1997 Amateur Radio Newsline Young Ham of the Year, Brian Mileshosky, N5ZGT, is in the same class. Brian was the 1999 Hiram Percy Maxim Award winner. He's now 24, married, heading to grad school in the fall, and still very active in Amateur Radio activities in New Mexico.

"All his work in Scouting and DFing and things of this nature that are the epitomy of Amateur Radio again for young people," Haynie says. "When I first met Brian, I was just blown away by his professionalism and how he handled himself as a young amateur. These three young individuals I think set the example and set the standard which we would like to see Amateur Radio go toward."

Mister Haynie says now that the Hiram Percy Maxim selections have been made for 2004, it's soon time to begin identifying candidates for 2005. You can find out more about the award, the qualifications, and the nominating process at www.ARRL.org.

To learn more about Andrea and Jay's accomplishments, you can also check out our website at www.arnewsline.org

For Amateur Radio Newsline, I'm Amy Abramowicz, KB3IJW.

--

We know that all of you join us in congratulating Andrea Hartlage, KG4IUM and Jay Thompson, W6JAY, on being selected top receive these very special awards. (ARRL S.W. Division Newsletter, ARNewsline (tm))

**

Break 1

More in a moment. Right now its time for you to identify your station. Tom Warrenbuerg if you please: "From the United States of
America, this is the Amateur Radio Newsline, heard on bulletin styations around the world, including the KA9EKG repeaster serving Delavan, Wisconsin."

(5 sec pause here)

**

HAM RADIO POLITICS: ARRL BARD MEETING

The naming of Andrea Hartlage, KG4IUM, and Jay Thompson, W6JAY, as winners of the Hirum Percy Maxim Award was only one of many decisions made at the recent meeting of the ARRL Board of Directors. Many of the Boards actions will impact on all of ham radio for years to come. Here's another Abramovich clan -- Mark Abramovich, NT3V, with
that part of the story.

--

In an historic step, the ARRL's board approved the launch of a grassroots lobbying campaign designed to raise awareness among legislators and government agencies about the Amateur Radio service.

ARRL President Jim Haynie, W5JBP, says there was careful deliberation before the board decided to launch the campaign.

"With all the things we have going on right now, such as BPL, our CC&R bill, our Spectrum Protection Act and even the restructuring program that we have it's time to raise our level of visibility," Haynie says.

Haynie says the ARRL board put the directors in charge of appointing volunteers to staff three positions in each division to work as Congressional Action chair, coordinator and assistant.

He says the chair would be someone who has had some experience in lobbying. A coordinator, with the blessing of section managers, would be selected for each state to work with the chair. And, he says, that coordinator would seek assistants to help spread the ARRL's message to congressmen and senators.

"This is a very orchestrated effort and I'm happy to see it happen," Haynie says. "It's something that's been needed to be done for a very, very long time. And it's a good thing, Mark. It really is. It's something we should have done years ago, actually."

Haynie says recent pronouncements by the FCC's chairman clearly pose a threat to the Amateur Radio service.

"I heard Michael Powell say at the NAB (National Association of Broadcasters) conference in Las Vegas this year that everything was on the table," Haynie says.

"All frequencies were on the table for various types of services. "So, Amateur Radio has got to get in there and make sure that it's voice is heard and its importance of the communities that they serve and the people that like to do volunteer work."

Haynie says the league will also ask members to get more active in contacting their representatives in the U.S. House and U.S. Senate to express their views or simply introduce them to the value of the Amateur Radio service in their communities.

"And I'm not asking the league members to do too much, actually, but sit down and write their representatives," Haynie says. "And you don't have to complain about anything. Just tell them about Amateur Radio. Tell them how much it's meant to you and your life and how it may have shaped it or changed it.

"I've said for years some of the finest people I ever met have been through ham radio. But there's many hams out there that have whole careers based on it. And this is too important not to bring the level of visibility to a higher plain."

In other board business, Haynie says there was considerable discussion of Broadband over Power Line internet access and the pending FCC action. Haynie says the board was encouraged that the Alliant Energy BPL trial in Cedar Rapids, Iowa was terminated early because of interference complaints.

He says that move sent a message to other electric utilities exploring BPL.

"It's several dozen utilities now that have looked at BPL and said that it's not something they want to get involved with," Haynie says. "And our message is not economic because they can figure that out for themselves. Our message is the fact that under Part 15, there are certain rules that have to be abided by and we want to make sure that they do that."

Haynie emphasizes the league's position on BPL is clear and consistent and can't be perceived as denying people access to technology.

"We're not against people having broadband access, we're really not," Haynie says. "It's the fact that the interference that this

particular technology would bring to the HF bands is going to be a real problem and we've got to hold people's feet to the fire when they say that they're going to mitigate interference. That goes from the White House all the way down."

Finally, Haynie says he is growing cautiously optimistic about the BPL fight and the impact the ARRL's position is having on the industry and some in government agencies.

"I think that our message is beginning to get out, and, like I say, we're not confrontational" Haynie says. "We're just trying to say look at the facts, look at the engineering studies, look at the NTIA studies and draw your own conclusions. If you've got engineers on your staff, they're quite clear."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

A more in-depth report on the actions of the ARRL Board will appear in an upcoming issue of QST Magazine. (ARNewsline (tm))

**

RADIO RULES: VANITY CALL SIGN FEEE GOING UP

The FCC regulatory fee to obtain an Amateur Radio vanity call sign will rise from $16.30 to $20.80 later this year. According to the ARRL Letter, the FCC announced the new fee in a Report and Order in MD Docket 04-73. Thats also known as the "Assessment and Collection of Regulatory Fees for Fiscal Year 2004" and the FCC says it anticipates 7800 applications for that time frame. The FCC expects revenue collected from the vanity call sign regulatory fees in Fiscal Year 2004 to rise by more than $2100. The Report and Order becomes effective 30 days after it's published in The Federal Register. (ARRL)

**

ENFORCEMENT: CBS SAYS IT WILL NOT ACCEPT SUPER BOWL INCIDENT FINE

CBS says that it will fight any fines leveled against its television stations over Janet Jackson's startling Super Bowl performance. This, according to a top executive with parent company Viacom Inc. on July 19th.

An FCC staff recommendation did not call for fining CBS affiliates that aired the Super Bowl halftime show but are not owned by Viacom. But CBS itself could face a fine of $550,000 or of $27,500 for each of its 20 owned and operated stations that asired the so called Janet Jackson wardrobe malfunction.

Now, in a recent talk before the Television Critics Association, Viacom co-president and co-chief operating officer Leslie Moonves criticiszed any fine as being grossly unfair. He said that CBS considers the idea of a fine as patently ridiculous and that the company will take the matter into court if such a penalty is imposed. (Published news reports)

**

ON THE AIR: SAN DIEGO'S 96.9 MHZ PIRATE REACTIVATES

According to a news bulletin from Chris Carmichael, San Diego's 96.9 MHz pirate is back on the air. No news on the location ofthe transmitter site. (CGC)

**

RADIO LAW: HAWAII'S GOVERNOR VETOES AMATEUR RADIO ANTENNA BILLS BUT OVERICDE MIGHT BE ATTEMPTED

The ARRL Letter reports that Hawaii Governor Linda Lingle has vetoed two Amateur Radio antenna bills. Both pieces of legislation would have provided limited opportunities for amateurs living under private deed covenants, conditions and restrictions to erect antennas.

HB 2773 would have opened the door for amateurs living in condominiums to make arrangements with the homeowners' association board to install an antenna without having to change the CC&Rs. HB 2774 would have granted similar rights to the relatively few amateurs who live under CC&Rs in agricultural-zoned property.

Lingle, a Republican, invoked the same reason for refusing to sign both bills into law. She said that the bills were objectionable because they amount to an inappropriate and unacceptable governmental intrusion into the contractual affairs of the property owners.

But it may not be over yet. According to word from former Westlink News Production Coordinator Bill Orenstein, KH6QX, there is a move afoot to overide the Lingle veto in the Hawaii State legislasture. Orenstein, who now lives in Hawaii could not say when the overide action might take place or if it had any chance of success. (ARRL with additional information by KH6QX)

**

HAM RADIO ON THE NET: HAMBLOG.COM

www.hamblog.com is a new weblog host exclusively for amateur radio operators.

What is a blog you ask? Simply, its a spot in cyberspace where people post their thoughts and ideas on just about any subject. Some blogs let you do just that while others like hamblog.com are targeted to a particular subject. In the case of hamblog.com its our hobby of

Amateur Radio.

Charles Brabham, N5PVL, who administers hamblog.com says that hams have a lot of information to pass on to each other but traditional information systems such as magazine articles or speaking engagements at fests have proven to be unsuitable for. He says that Weblogs are highly flexible and highly individualistic and they hope that hamblog.com will provide a wellspring of knowledge about Amateur Radio that would be impossible to access or distribute by traditional methods.

Oh yes. Charles says that the service is free of charge so go check it out. The URL is simply www.hamblog.com (Via e-mail)

HAM RADIO CONFERENCES: THE DCC IN IOWA IN SEPTEMBER

On the ham radio social scene, the 2004 joint TAPR and ARRL Digital Communications Conference will be held September 10th to the 12th. This, at the Airport Holiday Inn in Des Moines, Iowa.

As part of the program, confereence planners are now accepting papers for the published proceedings. Submission are due by August 10th and should be sent tyo Maty Weinberg, ARRL, 225 Main Street, Newington, Connecticut, 06111. You can also e-mail them to maty@arrl.org

And very important. You can even take part even if you cannot be there in person. Thats because you do not have to be present at the conference to have your paper included in the proceedings.

Again, thats the 2004 joint TAPR and ARRL Digital Communications Conference fropm September 10th to the 12th at the Airport Holiday Inn in Des Moines, Iowa. More information is on-line at www.tapr.org/dcc (VHF Reflector)

ARNEWSLINE™ SUPPORT FUND REPORT WITH N6TCQ

Ladies and gentlemen, once again with some thank-you's, here is Amateur Radio Newsline's Support Fund Administrator, Andy Jarema,

N6TCQ.

--

We'd like to take a moment to thank everyone who helped us during our June
campaign. We heard from Brian Boccardi, N2MPM of North Brunswick, NJ; Lloyd Smith, WA9NLA and the Peace River Radio Association of Port Charlotte, FL; Billy Bryant, Jr., of Harvey, LA; The Reading, PA Radio Club, W3BN; Eric Olena, WB3FPL of Mohnton, PA; monthly contributor Joseph Bartzi, Jr., KC8DKF of Columbus, OH; our friends at the Dayton Amateur Radio Association; Mark Otspaih, also from Dayton Ernest Clark in Greenwood, IN; and C. Mark Burlingame, KB9TVD of Northlake, IL

The boss said I only have about a minute, so we'll have to do the rest of the list next week. Thank you to everyone. A reminder that Newsline is a 501c 3 California non-profit corporation. Information on how to support us is on our website at www.arnewsline.org. That address will be repeated at the end of the newscast.

I'm Andy Jarema, N6TCQ.

--

Thank you Andy. Now back to the news. (ARNewsline (tm) Support Fund)

**

RADIO SAFETY: CELLPHONE TAKES BULLET AIMED AT SUBSCRIBER

A South African merchant says he owes his life to the Nokia cellphone he was holding to his ear when he was ambushed by someone in a passing car. Andre Steyn felt the bullet penetrate his hand, only to be stopped by the phone before it could penetrate his head. The entire story is on-line at www.mobilemonday.net/mm/story.php?story_id=3653 (CGC)

**

RADIO ON THE ROAD: THE SHRINKING SYNDROME

If you are finding the size of your car and your mobile rig shrinking, you are not alone. According to Lee Cobb, W6TEE, writing in Worldradio Magazine, the actual size of automobiles has not changed much ion recent years, but the competition for space in front has. As a result, under dashboard mounting of gear is almost out of the question due to such amenities as consoles and such.

But fear not. Lee has some interesting notes on how to conquer the new car lack of space syndrome and ways her has found to get around the problem. You can read all about it on Lee's H-F Mobile column on
Page 31 of the August issue of Worldradio on newsstands right now.

(ARNewsline (tm))

**

HAM CONFERENCES: AMSAT-UK SPACE SYMPOSIUM

And AMSAT - UK is holding a Space Symposium at the University of Surrey from Friday the 30th of July to Sunday the 1st of August. On the Saturday there will be special beginners sessions run by Howard Long, G6LVB, aimed at those wishing to get into the fascinating world of amateur satellite communications. The RSGB GB4FUN van will be on site throughout the event. For booking information and full program details take your web browser to www.uk.amsat.org or contact Jim Heck by e-mail to g3wgm@amsat.org (AMSAT-UK)

**

WORLDBEAT: DXPL NOW ON WRMI

Turning to news from around the world, this item for hams and SWL's
who listens to the D-X Party Line show. Allan Graham, who hosts the DX Party Line has announced that the show will now be carried by WRMI each Sunday at 0300 U-T-C. That's 11 PM Eastern and 8 PM on the West Coast on Saturday here in the U-S-A. The frequency to listen on is 7.385 MHz.

WRMI is oned by the Florida based Radio Miami International and is heard throughout the Americas -- from Alaska to Tierra del Fuego -- in English, Spanish and other languages. The new schedule for the DX Party Line was slated to begin on July 24th. (ASWLC)

**

WORLDBEAT: SAQ NAMED WORLD HERIRTAGE STATION

SAQ, the Alexanderson alternator VLF transmitter at Grimeton in Sweden has been declared a World Heritage site by UNESCO. According to the RSGB News, the decision was made by the World Heritage Committee of UNESCO at a meeting near Shanghai in China on the 2nd of July.

S-A-Q continues to make occasional transmissions on 17.2 kHz on CW. The last one was on the 4th of July. (RSGB)

**

ON THE AIR: NEW PROPAGATION BEACONS IN CM88

Some new propagation beacons to report. K7XC reports over the VHF Reflector that as of 05:00 U-T-C on July 19th the KJ6KO 2 meter, 1 and 1/4 meter and 70 centimeter beacons in grid square CM88 are all clearly audible at his home in Fallon Nevada. Thats grid DM09.

The new beacons operate on 144.282 at 40 watts into a pair of loop antennas. The 1 an d 1/4 meter unit is on 222.014 with 25 watts into two stacked loops and the 70 centimeter beacon runs 100 watts into four stacked loops on 432.292 Mhz. KJ6KO says that he would apreciate any Q-S-N reports. Send them to his Callbook address. (VHF Reflector)

**

DX

In D-X. word that members of the United Kingdoms Wrexham and District Amateur Radio Society will be operating from the Isle of Man froom September 1st through the 8th. The exact operating location will be Scarlett Point which isd a decomisdsioned Coast Guard look out tower, approximately 1.5 miles South of Castletown, Isle of Man. Operation will be on all High Frequency Bands, plus 50Mhz, 70Mhz, and 144Mhz, at full UK Power. The team is expected to operate on at least 2 H-F Bands simultaneously, and will be running CW, SSB, RTTY, PSK and some SSTV. More is on the teams website at www.gb4iom.co.uk (GB2RS)

Also word that Andorra is now on 6 meters. According to ON4IQ, Andorra has released the 6 meter band to all resident amateurs. He reports that C31JI and C31HK are both already active on the band. (GB2RS)

**

THAT FINAL ITEM: SOMALIA GIVES HAM RADIO INCREASED POWER LIMITS

And finally this week, the ARRL Board Meeting was not the only place where things were ham radio changes were happening last week. Another was the nation of Somalia which has acted to grant its ham radio population a power increase to 3 kilowatts. Thats right. We said 3000 Watts and thats 3000 P-E-P for SSB and 3000 watts average for other modes. Somalia is also letting hams use of the 88 to 108 Mhz band for F-M and permitting Amateur Television broadcasts to be conducted on any unoccupied standard VHF or UHF television channel. WIA newscaster Graham Kemp, VK4BB, has more:

--

Yes the Ministry of Information, Telecommunication and Culture in Somalia has made these changes and more as part of action to implement the W-R-C 2003 accords.

And the Ministry has also made additional frequency allocations for amateur radio experimenters in Somalia. Radio Amateurs in that nation can operate on additional bands including Zero to 9 Kilohertz, from 70 to 90 Kilohertz and 130 to 190 Kilohertz. On Medium Wave frequencies include 495 to 526 Kilohertz, while on the High Frequencies the hams of Somalia get 5.060 to 5.450 MHz and 26.100 to 29.700 MHz excluding 27.995 the sliver band from to 27.999.

This Ministry is promoting Somalia as the best holiday and research destination for visiting radio amateurs. This, as a way of attracting skilled people to help the local Somali people become ham radio operators. Abdikariim Ali Sulatn in Puntand State Somalia confirmed again that Aussie Amateur Sam Voron, 6OA, will continue to conduct ham radio license qualifying courses and issue amateur radio licenses free of charge "in the name of this Ministry" until a national Somali Amateur Radio Society is formed.

And, oh yes. If you are planning to go there, a Somali Visitors Amateur Radio License is now issued to any class of overseas amateur radio license holder as a courtesy. It is free of charge and issued for life unless canceled by the Somali Government. Talk about an inducement to visit a far off land.

Reporting for the Amateur Radio Newsline, I'm Graham Kemp, VK4BB, for
the WIA News, in Brisbane, Australia.

--

According to a Somali spokesman, as of now, no other country provides radio amateurs with more frequencies or a higher transmitter power output. He added that Somalia welcomes visiting radio amateurs from throughout the world. (WIA News)

1946. Travel Advisory for Hsin Chu, Taiwan Please Broadcast this Warning

Newsgroup: rec.radio.cb
Date: 2004-07-24 13:43:54 UTC
From: taiwan.teacher@gmail.com
Message-ID: <b0fedcad.0407240543.36a051b9@posting.google.com>
Source record: 184806

Please Broadcast this Warning
Travel Advisory for Hsin Chu, Taiwan
A travel advisory has been issued for Hsin Chu, Taiwan following an armed attack on numerous foreign residents and tourist including American, Australian and South African nationals. Neither the local police nor the central government of the Republic of China on Taiwan have acknowledged an attack on May 23, 2004 that left a South African couple hospitalized in serious condition from multiple lacerations and stab wounds.
These attacks on non-Chinese were initiated by unknown criminal elements operating unhampered in Hsin Chu, Taiwan in the days preceding the second largest international computer trade show (Computex) in Hsin Chu, Taiwan the following week.
All foreign nationals are strongly recommended to avoid travel or stays of long duration in Hsin Chu, Taiwan.
This advisory has been issued by the defacto Foreign Teachers Union on Taiwan, SSETT.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.cb

For sale. Ex.cond. Icom IC-735 all mode HF xcvr. Comes with the matching PS-55 20amp power supply,SM-6 desk mic,original boxes and manual for radio and mic. Everything works great. Radio does have the plastic door and it stays shut (not worn out like some). Very little use. I do have a pic of unit I can email. Price is $450.00 + shipping from 96002.

Any qustion please email me direct at kf6ikc@sbcglobal.net as I do not read the list very often.

1955. Re: Extra channels on JC Penney 6247

Newsgroup: rec.radio.cb
Date: 2004-07-25 01:30:46 UTC
From: Chris <spadfly@earthlink.net>
Message-ID: <a3EMc.13934$Qu5.1070@newsread2.news.pas.earthlink.net>
Source record: 184815

OK, I won't cover the PLL02A and how to install extra channels. If you're here, you already know how to do that. You also might want to check out http://www.cbcintl.com/docs/broadbanding.htm . This should help if you have VCO problems. My VCO was fine.
If you have a Sams book on this radio, please refer to it for parts locations.

The first thing I did is modify the connections to T4. You'll need to remove the shield on the bottom of the board to do this. There are 3 pins on one side and 2 on the other. On the side with 3 pins, move the connection on the center pin to the unused pin. You can either cut the trace or suck the solder off of it and make sure the pin can't contact the solder pad. Then just use a piece of wire from the trace to the unused pin. This makes T4 a little broader and brings up the 27 MHz signal a little too. I also changed C36 from 150pf to 100pf. This increases the 10.639 MHz SSB signal, which helps make up for the losses from retuning for a broader range. It helps the receive as well as the SSB transmit.

After the circuit mods are done, tune T1 and T4 for the highest channel and T2 and T5 for the lowest channel. Tune for highest USB output. You probably don't have to retune everything. If the receive seems OK, leave it alone. You'll probably need to adjust RV11, mic sensitivity and RV8, SSB AGC. The one thing I do disagree with in the Sams book is the tuning procedure for T3. I think it's better to go by the RF watt meter than the oscilloscope on TP3.

Well, I think that pretty much covers it. I now have channels from 26.645 to 27.805. It goes higher but this is what I tuned for. The SSB mic sensitivity will vary a little across the band but not as bad as before. If you have any more questions, feel free to post them.

Chris

I'd love to hook your radio up to a spectrum analyzer and see all the
spurs you have created after de-Q-ing the filter. You do understand
the importance of a high-Q tuned tank following any RF final that
isn't Class A, don't you? How much of the power you gained from the
mod actually ended up on the intended freq?

From: Chris <spadfly@earthlink.net>
Message-ID: <EhFMc.14006$Qu5.1875@newsread2.news.pas.earthlink.net>
Source record: 184817

I didn't modify anything following the final. There are 3 amp stages after T4. The mod just barely lets it pass a 1 MHz bandwidth. BTW, I'm not sure what the exact class of the final amp is, but it's not class C. There is a bias adjustment and it is properly set. I believe all SSB radios have linear finals.

Good Day,
Chris

>finals.
>
>Good Day,
>Chris

I shouldn't have had to say "the importance of a high-Q tuned tank
following -any- RF amplifier or modulator stage" because detuning
anything prior to the final makes things even worse -- if you pass
harmonics -prior- to the final, the harmonics will be amplified -by-
the final. Hook it up to an SA and you'll see what I mean.

And yes, SSB finals must be linear, but the linearity of the final (or
any driver) is not the issue since the only requirement for RF linear
operation is to conduct for at least 180 degrees of the RF sine. The
flywheel effect of the tank reproduces the remainder of the sine. And
even though Class C amps also use the flywheel effect to complete a
sine wave, they are not linear because they conduct for less than 180
degrees. Unless you are running Class A, the flywheel effect of a tank
(bandpass filter) is absolutely necessary to avoid passing harmonics.
In fact, I would recommend a filter on a Class A amp -as well- since
it's not easy to get power Class A (audio -or- RF) with much less than
5-10% THD.....

Nice radio, but in the future, loose all the HTML when posting to news groups. A lot of people would be willing to help if that message wasn't so annoying. And, when you post to a news group that's where the answers go. Other news readers may be interested in the suggestions you get.

Post in plain text to rec.radio.amateur.antenna for a better answer. You also need to define whether you plan on using it mobile or as a base station. The choice of antennas is very different depending on how you intend to use it and what bands you want to use. For mobile use a Screwdriver antenna might be good. For home use, a G5RV and a tuner will get you on all bands. You can find out both of them with a simple Google search.

Of course, we are going under the assumption that you have a Ham license and can legally use it.

Oh Yea, I guess you did say "mobile" antenna. Sorry about that. The
HTML posting was so overwhelming that I missed it. Anyway, good luck
with your rig.

Hello all:

I am looking for a schmatic for a General Radiotelephone Super MC12.

Will be happy to pay for the coping, mailing, and gas costs.

Jay in the Mojave

1970. Andrea Hartlage (KG4IUM) named 2004 Amateur Radio Newsline™ Young Ham Of The Year

Newsgroup: rec.radio.cb
Date: 2004-07-25 18:08:15 UTC
From: radionews@aol.com
Message-ID: <20040725140815.26512.00002196@mb-m03.aol.com>
Source record: 184830

Andrea Hartlage (KG4IUM) named 2004 Amateur Radio Newsline™ Young Ham Of The Year

(Los Angeles, CA) She is 15 years old, about to become a sophomore in Grayson High School in Grayson, Georgia where she holds a 96.41 Grade Point Average and has dedicated the last four years of her young life to serving the needs of her community and its youth through Amateur Radio. For that reason and many others, Andrea Hartlage (KG4IUM) has been selected to be the recipient of the 2004 Amateur Radio Newsline™ Young Ham of the Year Award.

Andrea was first licensed in 2000 and currently holds the Amateur Extra class which is the top of the line. She credits her father with kindling her interest.

"My dad interested me, he introduced it to me, Scott Hartlage, KF4PWI and he introduced me to Amateur Radio - I guess it was four years ago," she says. "I just sort of got interested in the public service side and I also serve as net control and I enjoy doing that and all the other things." (A "net control" is the person in charge of a group of ham operators performing emergency or public service communications.)

Andrea has been quite active since getting her FCC license just four years ago.

"I do a lot of public service with parades and different types of marathons and things like that," she says. "I write the youth column for ARRL website...I'm assistant section manager for youth of the Georgia section and I'm a member of several local radio clubs." The ARRL is the American Radio Relay League, the National Association for Amateur Radio, based in Newington, Connecticut.

Among her many achievements, Andrea has served as an instructor at J.E. Richards Middle School Amateur Radio Club as part of the "ARRL Amateur Radio Education & Technology Program." The program's goal is to improve the quality of instruction by providing an educationally sound curriculum focused on wireless communications. The project emphasizes integration of technology, math, science, geography, writing, speaking and social responsibility within a global society. Andrea's instructional work at the J.E. Richards Middle School Amateur Radio Club was part of the pilot program.

But Andrea's work in the area of recruiting youngsters into the Amateur Radio hobby goes far beyond her local community. She is an

internationally known writer with a monthly on-line column titled "Youth@HamRadio.Fun" and also authors a similar bi-monthly column for the Young Ladies' Radio League (YLRL) Newsletter, YL-Harmonics. As a public speaker she has appeared at the Dayton Hamvention Youth Forum in Ohio and continues to promote the hobby to youngsters at local hamfests, club meetings, and other public events.

In the area of public service, Andrea has already completed the ARRL Emergency Communications training course and serves as the network control station for several regularly scheduled on-the-air emergency communications training sessions. These include networks sponsored by the Gwinnett Amateur Radio Society and the Gwinnett County Amateur Radio Emergency Service (ARES). Andrea also was the control station of the GEMA/ ARES Net for activation during the G8 Summit Conference. On the technical side, Andrea has already used the skill she learned through Amateur Radio to build communications gear for the September 2003 World Canoeing and Kayaking event.

Andrea is a member of several prestigious hobby radio organizations including the ARRL and YLRL mentioned above, the FISTS Club (an international organization dedicated to the preservation of the historic Morse Code), the Gwinnett County Amateur Radio Emergency Service, the Gwinnett Amateur Radio Society (GARS), the Alford Memorial Radio Club, the A-1 Operator's Club and scouting Venture Crew 73.

As to her future, Andrea says Amateur Radio and all the opportunities it has given her, also has opened her eyes to some career possibilities.

"I'm possibly thinking about some kind of journalism and writing these (ARRL) columns helps me develop writing skills," she says. "And, I'm also thinking about some type of communication field that I really enjoy, like, for example, serving as net control and learning how to communicate effectively."

At the end of her freshmen high school year, Andrea had all A's, placed 7th in her class of 664,. She takes all "Gifted Level" courses and will be taking "Advanced Placement" next year.

The Amateur Radio Newsline™ Young Ham of the Year Award will be presented to Andrea Hartlage on Saturday, August 16th, 2003 at the Huntsville Hamfest in Huntsville, Alabama. The award ceremony will be co-hosted by Bill Pasternak (WA6ITF) of Amateur Radio Newsline™, and YHOTY Award Committee Chairman Mark Abramowicz (NT3V). Also present at the ceremony will be representatives of corporate underwriters Vertex Standard USA, Inc. and CQ Magazine. The presentation of the award as a regular feature of this prestigious Amateur Radio convention has been made possible through the generosity of the Huntsville Hamfest Planning Committee and its Chairman, Walter "Scotty" Neustadter, (W4WW).

As "Young Ham of the Year," Andrea Hartlage, will receive -- courtesy of Vertex Standard USA -- an expense-paid trip to the Huntsville Hamfest, along with a gift of Yaesu ham radio equipment. CQ magazine will treat Andrea to an expense-paid week in Spacecamp Huntsville, and will present her with a variety of CQ products. Amateur Radio Newsline™ will provide Andrea with a commemorative plaque at the award ceremony. The cost of year's plaque has been underwritten by Dave Bell (W6AQ) - President of DBA Entertainment Inc., Hollywood California.

The corporate underwriters of the "Amateur Radio Newsline™ Young Ham of the Year Award" are world leaders in their respective areas of Amateur Radio product support. Vertex Standard USA, Inc. is a trailblazer in the design, manufacture and distribution of high quality YAESU Amateur Radio and commercial two-way radio equipment. CQ magazine is considered the trend-setting publication serving today's modern radio amateur.

The Amateur Radio Newsline™ Young Ham of the Year award program, (formerly the Westlink Report Young Ham of the Year) now entering its 20th consecutive year, is presented annually to a licensed Radio Amateur (Ham) who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur Radio hobby/service.

Past recipients of the Young Ham of the Year Award, all of whom epitomize the heart of dedication to their nation include:

Shawn Alan Wakefield, WK5P, of Bartlesville, Oklahoma (1986)
David Rosenman, KA9PMK, of Muncie, Indiana (1987)
Jonathan Binstock, NK3D, of Potomac, Maryland (1988)
Erin McGinnis, KAOWTE, of Topeka, Kansas (1989)
Mary Alestra, KB2IGG, of Staten Island, New York (1990)
Richard S. "Sammy" Garrett, AAOCR, of St. Louis, Missouri (1991)
Angela (Angie) Fischer, KBOHXY, of St. Louis, Missouri (1992)
Kevin Boudreaux, N5XMH, of New Orleans, Louisiana (1993)
Allison Zettwoch, KD4CKP, of Louisville, Kentucky (1994)
Adam Weyhaupt, N9MEZ, of Alton, Illinois (1995)
Toby Metz, KB7UIM, of Boise, Idaho (1996)
Brian Mileshosky, N5ZGT, of Albuquerque, New Mexico (1997)
Richard Paczkowski, Jr., KF4BIA, of Edgewater, Florida (1998)
Michelle Swann, KE4EZI, of Warner-Robins, GA (1999)
Christopher Arthur, KT4XA, of Russellville, AL (2000)
Patrick Clark, KC8BFD, of Charleston, WV (2001)
Josh Abramowicz, KB3GWY, of Reading, PA (2002)
Jay Thompson, W6JAY, of Santa Ana, CA., (2003)

The award sponsors wish to also thank CQ magazine, Worldradio magazine, QST magazine, the ARRL Letter, and the Radio Amateur Information Network for their generosity in assisting in soliciting nominations for the 2004 award.

Big mistake posting that in here with
these dickhead AKC's running sniveling
to eBay....You might try relisting it in
Amatuer Radio or Other with no mention of 11 meters a definately not the word
CB!
Better luck....what were you asking???

"Got RF?"

funny, here is what was displayed on ebay:

Invalid Item

The item you requested (5711308754) is invalid, still pending,
or no longer in our database. Please check the number and try again. If
this message persists, the item has either not started and is not yet
available for viewing, or has expired and is no longer available.

If it was for sale, you'd post a price and someway to contact you.

As it is, this is for AUCTION, and no longer appears.

Big difference between a sale and an AUCTION.
Most folks hope to get too much in a AUCTION, so I wouldn't bid anyway.

Depends on his wants. If he doesn't have the space or
the mast to get it up there, I recommend a army bigstick or
IMax. All others aside, Jay's is hands down the best out there.

I'm looking for a deceit ground plane antenna which would be placed on a side of my tower up around the 70 foot level. I like the looks of the I MAX 2000 but shipping charges are a killer. The A99 looks like a good 1/4 wave ant. So far I haven't found anywhere near New Hampshire that sells the 2000. Might have to settle on the A99. Do they hold up in the New England winters?

Hello Groom Lake:

That Sterba Curtain, will catch all kinds of neighbor complaints. And I am sure the rotator is also a Loco Motive Engine. That will really piss off the neighbors at 2 AM when your full of beer it its time to drop the Maul.

And now a days fuel economy is a big consideration.

Is there a repair kit, should it be damaged by low flying aircraft, meteorites, or UFO's. In a good antenna design these have to be asked.

Small antennas as this probably will easily handle amateur and commercial power levels, but not CB Power levels.

I crack myself up........

Hi Jay... over there in the Mojave (somewhere in dx land),

I'm just wanting to experiment a little bit. I'll just make a 1/4 wave out of a mobile whip and some ground radials, get the swr down, then start tinkering. The hat was just a thought and according to some web site that currently eludes me, it's supposed to help. I wanted to see that for myself. Does this effect increase the gain over a 1/4 wave?

==========

It wouln't change the gain, but it will give the antenna more bandwidth.

Hey, better late than never. On a lighter note,
sure been nice in here lately, can't complain about that.

Source record: 184763

Hello Dr. X:

The Top Hat will increase the antenna capacitance, which makes the antenna look electrically longer. The larger the Top Hat the more it will make the antenna look longer. But you will also want to keep an eye on field strength levels, as the Top Hat gets to a certain larger size, it may skew the antennas pattern. But need to do field strength tests to verify this.

I have used a Coffee Can Lid (it is made from Tin) punching a hole in the center and placing it on the antenna. And adjusting it up and down the length of the antenna. It can temporarily be allowed to just hang there while you measure the SWR Vs Frequency, and record those measurements on a plot or chart.

One really important thing to know is when your experimenting around with a antenna, is to record the antenna configuration, and its SWR measurements. Thank goodness for the digital camera. I record antenna type, lengths, height, length of coax, and in this case what the diameter of the Top Hat and its distance from the top of the antenna or base is.

The 1/4 wave antenna will never have a 1 to 1.0 SWR, because its closer to a 70 Ohm Impedance Antenna, instead of a 50 Ohm Impedance Antenna.

Try A Hairpin Matching on the 1/4 wavelength antenna. A short wire at the base of the antenna, and the other end connected to ground, the body of the vehicle or ground plane radials. Yeah this appears to look like a dead short, but its not. Suggest you try a Hairpin loop of about 6 inches long, to start with, and then measure the SWR. Adjusting the Hairpin length and antenna length should get that 1/4 wave down real close.

Another consideration is that the 1/4 wave antenna is going to be real close to a perfect match. Most 1/4 wave antennas will have a SWR of 1 to 1.3 or 1.2 real low. So getting the match down to a perfect match may not worth the trouble. Unless your using a large amp.

Another way of getting a 1/4 wave antenna SWR down to a perfect match is using a Toroid Transmission Line Transformer, a Unun (Not a Balun) that will have a 50 Ohm input impedance and a 75 Ohm Impedance output. Also the ARRL Antenna Book shows 75 Ohm Coax Matching method.

The Top Hat will not increase the antennas bandwidth. The Top Hat will shift the Antennas Bandwidth lower in frequency. You can verify this with the before and after Top Hat, SWR Vs Frequency measurements. A SWR Meter can be used to measure the SWR, or a Antenna Analyzer is faster. But again you need to record the SWR Vs Frequency measurements, so that

you can see the differences in the antennas bandwidth. Recording the SWR
at these points. 3.0, 2.5, 2.0, 1.9, 1.8, 1.7, 1.6, 1.5, 1.4, 1.3,
1.2, 1.1, and 1.0. And plot or record them.

Once you start plotting the measurements, you will start to have good
sense as to the antennas performance. You can unconnected the coax at
the antenna end and see what happens. Put metal objects near the antenna
and again see what happens. You will become very knowledgeable.

Oooops the last sentance should have been:

Once you start plotting the measurements, you will start to have good
sense as to the antennas SWR performance. You can unconnect the coax
shield at the antenna end and see what happens. Put metal objects near
the antenna and again see what happens. Add and subtract different
lengths of coax, and see what happens. You will become very knowledgeable.

Jay, if you increase the angle of the radials from the radiator...more than
the standard 90 degrees, you CAN get the impedance to around 50 ohms.
Remember the Starduster? It was nothing more than a quarter wave with the
radials lowered to get the impedance close.

And to those who know nothing, please don't start the same old garbage about
the Starduster being a half wave, it ain't. 9 foot radiator, and 9 foot
radials make a quarter wave antenna.

Take care,
Randy

The English version is on line !

On line for one year, the site devoted to HAM INTERNATIONAL products, has
received the visit of approximately five thousands Net surfers to date.
To simplify its access to the greatest number, its pages "got dressed" with a
new address:
http://www.ham-international.com easier to retain. Some diagrams are already on
line, others will follow soon as well as new pages. The objective is to ensure
a retrospective detailed, of a range of TX/RX, accessories, micro antennas
etc... extremely present on market CB and Radio ham in the Eighties. Many
equipment still present are wisely arranged on the chimney, others fewer are
always active. You will find information of all kinds concerning the materials
(characteristic detailed, infos technical adjustments, photographs etc...). For
some perhaps it will act of a discovery, for others the occasion to come back
at the time glorious of our Hobby. Do not hesitate to contact me if you have
anecdotes, documents, suggestions. In waiting be welcome.

Good visit and @bientï¿½t.
Daviken (14DVK01)

Source record: 184769

From: sparky@NOSPAMaimcomm.net (Frank Gilliland)
On Tue, 20 Jul 2004 10:21:32 -0400, nicolaicarpathia@webtv.net (Nicolai Carpathia) tried desperately to walk and chew gum at the same time (post on-topic while trying to discredit me) by writing in <6413-40FD2A6C-581@storefull-3253.bay.webtv.net>: On 19 Jul 2004 05:01:36 GMT, rochusmc@aol.com (ROCH USMC) wrote in <20040719010136.05916.00001968@mb-m05.aol.com>: *Hi *Here is what I just got, Cobra 29 LTD Classic that was bumped up a bit, a new Palomar Elite 300 amp (ebay) , Diesel (?) noise canceling mic and a Wilsom 5000 mag mount ant.
I cant get the SWR down below 2.5. I ran a new 18' cable and a ground wire to the frame of the truck but ever time i key up the ANT light lights up on the radio.
My questions are:
1. How can I get the SWR down?
-
>Just three words: Grounding, grounding, and

>grounding. You need to ground the radio AND

>the amp AND the antenna.

The antenna is already grounded. A Wilson mag mount needs no additional ground.

>A magnet isn't a any type of electrical

>connection at all.

Try again,,s-l-o-w-e-r. A Wilson mag mount needs no additional ground. That you erroneously feel that "electrical connection" and "ground" are interchangeable and synonymous
doesn't make the two terms mutually exclusive.

> Some have been duped into thinking there's

>a capacitive coupling between the magnet and
>body through the paint, but fail to realize that

>the magnet itself prevents any capacitive

>coupling. That's why most mag-mounts come

>with 18' of coax yet frequently show high

>SWR.

Wrong. The length of coax has absolutely nothing to do with capacitive coupling in a mobile application. In addition, "most" Wilson mag mounts do NOT show high SWR. You not being familiar with something should clue you in that you're not qualified to judge it. You have given poor advice and incorrect advice concerning this item.

> And unless the antenna is a dummy load,

>you can move the cable around and watch the
>SWR needle wander.

Again,,wrong. And if you can "move the cable around and watch the swr needle wander" on YOUR mobile application when using a mag mount or anything else, you need a consult a technician who doesn't claim a relation between coax length and "capacitive coupling" when applied to a correctly installed Wilson mag mount.

>Fact: Mag-mount antennas have piss-poor

>ground connections.

Fact: In all but the most notable exceptional applications, the grounding of a mobile mag mount, specifically a Wilson, is more than adequate for its intended use.

>By "grounding" I

>mean an "RF ground".

You can make it "mean" anything you wish and your little black heart desires but the fact that the antenna doesn't meet with your personal approval doesn't change the hard facts that only you have a problem with accepting the tried and true test data that has been widely accepted across the radio spectrum world by real engineers, designers, and users worldwide.

>At 27MHz, this means

>mounting the radio and amp directly to the

>chassis and/or using grounding straps that are
>no more than a few inches long. Only after

>your system is properly grounded can you

>address any other issues.

Nonsense. One can mount the radio in a slide mount and to make it temporary or it can be mounted in a permanent manner.

>Nobody said it couldn't.

You said the radio must have a ground strap running to the chassis in order to be properly "grounded",,this is untrue.

>A slide mount is fine if

>the receiver half is mounted to the chassis (or

>with a very short grounding strap).

Sure, that's another way of many, but proper grounding doesn't always necessitate the radio be attached to the chassis.
It can be mounted
to the dash and a myriad of other places.

>Strip the plastic and vinyl from the dash, and

>behold... the chassis!

>The chassis also exists in a "myriad of other

>places".

And the chassis is not the be-all end-all answer to ground as you mistakenly profess. In fact, the lack of a ground strap to chassis in the described
application probably has nothing at all to do with the SWR he is seeing, but with you not being familiar or educated on Wilson antennas and their characteristics and properties and performance, such balderdash is to be expected from voodoo wannabe techs like yourself. Bottom line,,the radio does not need
directly mounted to the chassis in order to
provide adequate grounding. In fact, this is less
practical and not the manner of which the majority of cb installs are complete.

>It's very practical.

Try it again,,,,s-l-o-w-l-y. I said it was "less" practical.

>It just takes a little extra effort.

So does educating you on matters you know nothing of, but you appear to get frustrated and angry when someone tries to clue you in on matters you know nothing of, but your low self-esteem and briused ego kicks in and takes over and you become hostile and adamant and insst on keeping your mind closed. It's almost as if you piss yourself off when you don't know something and you can't stand to be informed by anybody. In fact, in the past when you have been wrong and corrected, you hurled insults and called names and attacked those who have corrected you in the past, calling them voodoo technicians. As always, you attack the person because you have nothing to attack the topic with.

_
Yes, that is but ONE manner of grounding your radio, but not the only manner in which to achieve proper ground..

>And those other issues can be many.

Almost as many as there are ways in which to mount the radio other than mounted directly to
the chassis.

>For example, your 'bumped' Cobra may have

>been 'bumped' by a moron; your Palomar may
>have a detuned input or output, a bad power

>transistor, or even worse it might be

>self-oscillating; you might be using cheap coax

Well, if one is using a coax like you are familiar with (one that makes the SWR move when you touch the coax) then yes, I'm certain you are using cheap coax, among other problems.

>(never use foam!); you might have a bad

>antenna; etc. But regardless of the problem,

>it's always easier to troubleshoot if the system

>is properly grounded.

*2. Is this a good combo?

>Not really.

Sure it is. Palomar amps work quite well.

>When fed with the correct input levels.

Backpedaling as a disclaimer to your self-contradictions again,,,, Nevertheless, you didn't tell him this, you told him it was "not really' a good set up, knowing nothing of the input levels other than he had a peak and tune that could consist of a lowered dead key and a higher swing.

>A radio

>that has been "bumped"

>mean it has been tweaked for more power)

>may easily exceed the maximum input levels

>for the amp. Even 4 legal watts will overdrive

>most of the smaller amps.

Here you go again, way off base speaking that of which you have no clue or personal experience. The Palomars are hearty little amps and can take more than the four watt drive input. In fact, they can take DOUBLE the 4 watt drive with no adverse effect.

>The makers of these cheap linears

>(that usually aren't very linear at all) don't tell

>you that the power rating is for -peak- power.

LOL,,umm,,that's how amps are rated.
You used the term linear, he called it an amp.

>Unless his Cobra is capable of FM, your point

>is moot.

Lucidity is escaping you, OM. *You* spoke of linearity and FM, no one
else. Remain relevant, if you dare.

_
One that is familiar enough to add new coax to a Wilson is more than
likely already aware of
this.

>IOW, a 300-watt amp will do 300 watts PEP,

>which translates to a maximum of 75 watts

>RMS (AM carrier power). Push it any harder

>and you will get a bigger carrier, but you start

>clipping well below 100% modulation,

>splattering your signal across the spectrum. -

Watts are watts, regardless of how they are measured. Refer to them as
RMS, PEP, or BIRD, as you have in the past...watts are watts. With many
radios, the blue faced palomar 250 will sing 100 watts all day long
without bleeding and they are very cheap.

>A common misconception,

And again, its your common misconception. I fact, you have exposed
several of your "common misconceptions" in this thread.

>hence the frequent

>and continuing occurances of RFI, and the

>increasing popularity of LP filters.

The majority of RFI cases are NOT from cb,,,in fact, the complaints and
actions to the FCC concerning CB "bleed" or RFI is less than one half
percent of total complaints lodged with the commission and even LESS get
acted upon. As if that wasn't enough to stop you talking through your
arse.............claiming LP filters are suddenly seeing a surge in
popularity by the "cheap linear" crowd is hilarious, but then again, you
are in a dark room with a loaded gun shooting wildly just hoping you can
hit something.
And since when have LP filters become "increasing in popularity" by the
cheap linear crowd? By what standards do you judge this? You have
claimed those using the cheap linears are cbers who don't give a damn
about bleed, so why would these same people suddenly begin purchasing LP
filters?
_

You also appear to be incorrect pertaining to modulation, as there are many instances pertaining to cb, when one wishes to achieve loudest optimum modulation, a power mic is required. Many times, this can cause the bleed over to begin. Remove the power mic in many applications, and the bleed can often be removed. I don't expect you to follow, Frank, you're still smarting after having your head handed to you after making the stupid comment that fiberglass antennas can have nothing to do with bleed issues.

>CB radios have modulation limiters which

Run like hell from that original topic, Frank,,,,,<g>

>prevent modulation from exceeding 100%

>(usually set for 90-97%). A power mic may clip
>and distort the audio, and if that happens just

>turn down the mic. But if the limiter has been

>disabled (as some monkey-techs like to do,

>one of their stupid "CB tricks"), the result is

>that the RF will start clipping and/or become

>unsymmetrical, both of which cause

>harmonics and 'splatter'.

In conjunction with amplifiers, this indeed can occur. With a barefoot 3 or 4 watt cb rig, any "splatter" or harmonics you refer become negligible and not a factor.

>And overdriving an amp is ALSO a cause of

>harmonics, as I described before. Cheap CB

>amps like the Palomar are rated in watts PEP,
>even though they don't specify them as such.

>The way to tell is to look at the spec sheet of

>the power devices (transistors) and find out

>how those are rated, which is usually for PEP.

>That is the case for the Palomar in question.

>The difference is that AM is measured in

>RMS.

Umm, Frank OM, you are the only one enjoying a discussion with yourself concerning how watts are rated. It wasn't mentioned (except by yourself).

>With an AM radio that does 4 watts

>RMS (which is also the carrier power), it

>outputs 16 watts PEP at 100% modulation. So
>if your AM radio is driving your 300-watt amp

>to 300 watts carrier -without- modulation, the

>result is some big-time distortion because the

>amp is incapable of meeting the 1200 watts

>PEP requirement for an AM signal at 100%

>modulation.

No one claimed otherwise, but a sideband education from you would be better received when you demonstrate a competent grasp of mag mounts and fiberglass antennas that are at times prone to exhibiting more RFI than metal antennas.
Besides, never was there an amp that required 1200 watts to achieve 100% modulation. Your modulation precentage is not dependent on an amp no matter how you slice it.
And how DO you expect to get 1200 watts from a 300 watt amp on AM, Frank?

>You should have had your Cobra 'dumped'

>instead of 'bumped'.

That's a personal opinion coming from one who doesn't know any better and bases his technical advice on nothing but personal emotion. Slight peaking and tuning is perfectly acceptable when done by a competent technician. In fact, Many cb radios can use a tune-up alignment after being shipped.

>Most experienced ampheads have their radios
>'detuned' for -lower- output power to prevent

>overdriving the amp. That's a fact, not my

>personal opinion.

Do try and remain relevant. You are so obsessed with amplifiers even when no one mentions them. Let's try it again for your benefit, shall we? You said, "You should have had your Cobra dumped instead of bumped" and I gently pointed out that is a personal opinion based on your strong presonal emotions you have a difficult time controling. As always, you wandered off topic and began babbling about "ampheads".

>As for a mag-mount, personally, I wouldn't

>waste my money.

Again, you don't know any better. Many of us have talked around the world on mag mounts, barefoot, on a regular basis. Mag-mounts are great

solutions for temporary mounts, rental cars, quick disconnects, etc.
Money spent on a Wilson is not wasted.

>It is to me because I don't need temporary

>mounts.

Touche......only, you were allegedly giving advice to another.... it was via your sockpuppet named ROCH, but thanks for clearing up that the advice you were giving was actually to yourself.....

> If I want to remove the antenna I just

>unscrew it. And I don't rent vehicles,

But of course you don't. After you told whatshisname that you couldnt afford to fly, that goes without say.

>I buy them.

And I don't build my boats, I buy them. Regardless, our personal nuances (even though you prefer to focus on them as opposed to pertinent topics) have nothing to do with other people finding the need to rent vehicles and having a need for temporary mag mounts, but then again, you are so out of touch with the majority of cbers you are unable to entertain any concept or scenario unless it appies directly to yourself....extreme narcissism and detached from reality.

>But you have,

Again, a perjorative personal opinion of yours. Lockheed Martin proved the efficiency of the Wilson in independent tests. You should check their test data and you may grasp why they are so popular and have legions of loyal customers,,,they make a tight product that delivers what they claim.

>Phen-fen had the support of independent tests
>and legions of loyal customers....

>Firestone had the support of independent

>tests and legions of loyal customers....

>Asbestos had the support of independent tests
>and legions of loyal customers....

>DT had the support of independent tests and

>legions of loyal customers....etc, etc, etc.

Try and remain relevant, OM. Citing and invoking other products do nothing for your position of claiming the Wilson Mag Mount is somehow an inferior product. AS usual, the world disagrees with you, as do the majority of competent antenna designers, electrical engineers, and amateurs.
In fact, the Pentagon and US government just hired Lockheed Martin to

DESIGN, CONSTRUCT, and implement THE definitive communications system
for the USA is the war on terror.,,but never mind that,,,,,YOUR opinion
supercedes the top minds of the US military's choice for communications.
It is Lockheed Martin and all their engineers, scientists, etc. and the
US military who is wrong and you who are correct.

>so you should know that 18' of

>coax isn't a reliable substitute for the terrible

>grounding characteristics of mag-mount

>antennas.

Again, only *you* were the one that tried to say there was a relation
between coax length and capacitive coupling with the 18 ft coax of a
Wilson Mag Mount. In fact, you have wandered off topic so many times
that coax length wasn't even mentioned except by yourself...LOL.

>If you want real power you need a

>real antenna, not a glorified refrigerator

>magnet.

"Real" is a relevant term. The Wilson will have no problem with the
amplifier he is using.

*3. on my amp it has a ON/OFF , HIGH, MED, LOW and a PRE-AMP on and off.
  What is with the PRE- AMP.

>The pre-amp is used to amplify the received

>signal. They are mostly worthless because the
>usually much better than the S/N ratio of the

>pre-amps. IOW, they will just make the noise

>louder. However, they work great for older and
>low-end transceivers, and simple homebrew

>receivers.

The pre-amps are worthless by no means. They work absolute wonders when
the needle is flat with no noise for those extreme fringe stations. I've
used a cheap pre-amp on a regular basis to talk to the east coast of Fl
late at night,,,BAREFOOT.

>That's because you run a Tentec.

Not with the pre-amp I don't..no need. I run a lot of radios. In fact,
it (the pre-amp) works the same on my Pearce Simpson as it does on the
Rat Shack TRC-30A as it does on the Washington. The only radio I dont
use an external preamp with IS the Ten-Tec....no need. Using a preamp
late at night on 38 low I can often hit the east coast with 12 watts.

>Oh, and up North we have come up with a

>really cool invention that has been adopted by

>the vast majority of civilized society. It's called

>the "shoe".

Well, the quicker you remove mine from your arse the sooner you may lose your obsession and that bloated, anal retentive feeling that is responsible for your self-created misery.

*Ok I know I will take a beating from some of you and that is part of the game but any help or any suggestions would be great.

>Here's your beating: If you want to play

>hammie', get a license.

There you have it,,,,your problem with CBers..you feel running an amp is "playing hammie",,a feeling that is YOUR problem, no one elses, regardless of how you project your dilemmas onto others.
Running an amp isn't "playing hammie" to all, just to those anal retentive status starved individuals.

>If you can't afford a license (about the price of

>a happy-meal), or if the test is too difficult

>(even when you are allowed to memorize the

>questions and answers before the test), then

>at least get yourself a book on the subject and
>learn what you are doing.

LMAO,,,,,piss poor advice,,,again. A no-code entry level license will teach him absolutely nothing regarding what he is "doing", as his doings are on HF.
Seeing as he can solder and change out a coax on a Wilson,

>He never claimed to have done anything of

>the sort.

Sure he did,,,he claimed he was "changing out the cable on the Wilson".

> Your communication deficit is acting up again,
>Twist.

You really are clueless of who you are talking to, Frankie.(hehe)..nevermind,,,,he indeed said he was changing out the cable on the antenna. That you fail to retain what you read is all one needs to know concerning who suffers the communication deficit, Frankie. I suggest you try reading the thread again s-l-o-w-l-y and come on back for that heaping of crow you enjoy me ramming down your throat.
With all the bullshit you have given this dude, he may run like hell

from anything hammie related, merely because someone like yourself is advocating it, and he wouldn't be blamed for doing so. It's just the manner in which you come across to all those you can't understand.

>You're just jealous because I haven't given

>you a good beating for a while.

You're forgetting things and rambling, blowhard, and once again, blaming me for your incompetence. I accept partial blame for your breakdown.

> Now go back to trollville and behave yourself

>until you are summoned for your next beating.

Beatings denotes violence,,,something you and scumbag KC8LDO have promoted and advocate against those you are not able to maintain rational debate with or control your emotive responses.

==========

>Well, if one is using a coax like you are familiar with (one that makes
>the SWR move when you touch the coax) then yes, I'm certain you are
>using cheap coax, among other problems.

If the SWR changes when you move the coax, you have problems.
Possibly one end of the shield isn't connected, or it's really awful coax,
or there's something wrong at the antenna attachment point.

There should never be RF on the shield, that alone says that you have a
significant problem.
Fix that first.

Put a dummy load on the end of the coax.
Check again. SWR should be excellent, and touching/moving the coax shouldn't
do anything at all.
Fix where needed, lather, rinse and repeat.

Once you have this right, then try again with the antenna.

>op

Perhaps someone from the FCC will educate and enlighten you. The free exchange of such information is completely legal and the FCC has no governing authority over such. High school grads know such things.
-

Just because it's a small amp doesn't mean it sucks. Everyone doesn't need huge watts to get around the world.....I've been a huge proponent of low power worldwide dx for years.
I hardly think think the FCC would be interested in these plans merely because your opinion says the amp sucks. Besides, why does it suck? Is the bias off? What radio did you try this amp with? Did you try and put the amp together and run into problems? The plans have been implemented by many operators, which is why they continue to be a popular offering.

Source record: 184777

I have just purchased a Midland 77-805 with a mod to be able to use both the UK and European channels.
Unfortunately the mod has been carried out poorly. The radio still works but has very low power. I have tried to boost the power but it wont go any higher than 1.5watts UK channels.

Does anybody know of this mod using a LC7132 chip piggyback and have a circuit diagram so i can check it is in correct?
Failing that does anybody have a service manual or circuit diagram of the Midland 77-805 radio?

ANY HELP WILL BE GREATLY APPRECIATED.

Steve

> Hello Dr. X:

Hello Jay.

> The Top Hat will increase the antenna capacitance, which makes the
> antenna look electrically longer. The larger the Top Hat the more it
> will make the antenna look longer.

Is this because the radials of the hat will take the place of the rest of the hight of the stinger? I mean, if I wanted to make the 1/4 wave look like a half wave, could I take a 1/4 length of wire, chop it up into a bunch of equal lengths and make a hat that way (knowing to make minor adjustments for an imperfect world)?
If this is indeed the case, wouldn't it be about the same as top loading?

> But you will also want to keep an eye
> on field strength levels, as the Top Hat gets to a certain larger size,
> it may skew the antennas pattern. But need to do field strength tests to

> Hairpin length and antenna length should get that 1/4 wave down real
close.

Yeah, I'd like to understand the haipin a little more. I'll be doing some reserch this weekend. I forgot about that method. It's been years since I've played around with radio. I'll bet the more things change, the more they stay the same.

> Another consideration is that the 1/4 wave antenna is going to be real
> close to a perfect match. Most 1/4 wave antennas will have a SWR of 1 to
> 1.3 or 1.2 real low. So getting the match down to a perfect match may
> not worth the trouble. Unless your using a large amp.

Perhaps I should abandon the 1/4 wave for something else? I wanted to experiment with the hat to see if I can get more performance from the same equipment. I think 1/4 wave is still the standard. Would an swr of 1.2 :1 be too high to get stable results when a hat is added?

> Another way of getting a 1/4 wave antenna SWR down to a perfect match is
> using a Toroid Transmission Line Transformer, a Unun (Not a Balun) that

I have a toyota tacoma and I mounted a 4' fiberglass antenna above the top rail of the bed next to the cab rear window. It is about 2"-3" away from the cab and 18" below the roof line. Is this going to give me problems with my range? Would it be better to build a mount that has the bottom of the antenna even with the roof line? Here is a link to a picture of the mount I made: http://members.cox.net/cppprogramming/ebay/tacoma.jpg

Is the amp rated for 100 watts peak, or dead key? It DOES make a
difference. An amp rated for 100 watts PEAK, can do no more than 25
watts of carrier power, if you want to make 100% on the modulation
side. A 100 watt dead key rated amp, will be capable of 400 watts peak
for 100% modulation.

>>With an AM radio that does 4 watts

>modulation. Your modulation precentage is not dependent on an amp no
>matter how you slice it.
>And how DO you expect to get 1200 watts from a 300 watt amp on AM,

I'm not going to comment on the other "points" of this post, but you
really need a refresher course on AM fundamentals, before entering
into this discussion. At least if you want to avoid tasting shoe
leather.

A 100% modulated signal WILL HAVE a peak power equal to 4 times the
carrier power.

The point that Frank was trying to make, which you obviously didn't get, was that if you are driving a 300 watt amp, and outputting a 300 watt carrier, there is no headroom left to provide for the 1200 peak watts necessary to achieve 100% modulation. If your amp puts out a max of 300 watts, then you should drive it so that the dead key output power does not exceed 75 watts of power, if you hope to present an undistorted 100% modulation output.

Those are the facts. Twist, distort, back pedal, or obfuscate all you want, but you can't run from RF theory.

I didn't say anything of the sort. First I said the magnetic mount
does not function as a ground coupling, which it does not. The only
practical and widely used alternative to a proper ground is the use of
a specific length of coax (18'), which is exactly what the mag-mount
antennas rely upon for an antenna ground.

> In addition, "most" Wilson mag mounts
>do NOT show high SWR. You not being familiar with something should clue
>you in that you're not qualified to judge it. You have given poor advice

Again you are twisting my words. I said, "most mag-mounts come with
18' of coax yet frequently show high SWR". I did not say "most"
mag-mount antennas show high SWR, nor did I limit this characteristic
to Wilson mag-mount antennas.

I said the radio and amp should be mounted "directly to the chassis and/or using grounding straps that are no more than a few inches long", which is true if you want to keep the radio and amp chassis at RF ground. And keeping the radio and amp at RF ground is highly suggested for many reasons, not the least of which is to keep RF off the coax (-especially- when using a mag-mount or NGP antenna).

Grounding may or may not be the problem, as I stated previously. But
as I -also- stated previously, the system is far easier to
troubleshoot when the system -is- properly (RF) grounded.

> Bottom line,,the radio
>does not need
>directly mounted to the chassis in order to
>provide adequate grounding.

No, not if you run a balanced system in your mobile.

> In fact, this is less
>practical and not the manner of which the majority of cb installs are
>complete.

The only thing impractical about properly grounding the system is the
little bit of extra work that is involved. A plug-n-play system will
work for the average Joe Schmoe, but if you want performance (high
efficeincy, power amplifier, etc) proper grounding is essential. If it
wasn't it wouldn't have been stressed as such in all the literature
ever written about radio since the days of Marconi.

A poorly grounded system can have RF on the shield regardless of the
quality of the coax. And even cheap coax (even RS RG-58) will work as
intended if the system is properly grounded.

>more than the four watt drive input. In fact, they can take DOUBLE the 4
>watt drive with no adverse effect.

If you mean they won't smoke, you are probably right. But the max
input power before clipping is determined by the max output power and
the gain of the amp, not by an arbitrary "DOUBLE the 4 watt drive"
rule of thumb.

>Lucidity is escaping you, OM. *You* spoke of linearity and FM, no one
>else. Remain relevant, if you dare.

I used the term 'linear' synonymously with 'amp' because in the
context (something you have always had a problem understanding) of
this forum they -are- synonymous. Only you made the distinction
between 'linear' and 'amp', and I addressed your nit-picking: If the
amp is not intended to be linear then it is not intended to be used
with the common CB modes of AM and SSB. Non-linear amps are good only
for FM and CW. And if you tried to focus a little harder I wouldn't be
explaining this to you as if you were a boot CBer.

>The majority of RFI cases are NOT from cb,,,

Again, I made no such claim. What I said was that overdriving amps is
becoming more and more common because of users that are uneducated as
to their proper use. I said nothing about "the majority of RFI cases".

>in fact, the complaints and
>actions to the FCC concerning CB "bleed" or RFI is less than one half
>percent of total complaints lodged with the commission and even LESS get
>acted upon. As if that wasn't enough to stop you talking through your
>arse.............claiming LP filters are suddenly seeing a surge in
>popularity by the "cheap linear" crowd is hilarious, but then again, you
>are in a dark room with a loaded gun shooting wildly just hoping you can
>hit something.

You may actually have a point -- it's very possible that ampheads are
becoming more complacent regarding RFI due to the FCC's lack of
enforcement.

>And since when have LP filters become "increasing in popularity" by the
>cheap linear crowd? By what standards do you judge this? You have
>claimed those using the cheap linears are cbers who don't give a damn
>about bleed, so why would these same people suddenly begin purchasing LP
>filters?

To keep the neighbors from getting pissed? To stay off the FCC's
radar? To keep big, fat BEs like me from knocking on their door?

It occurs regardless of the use of an amp because it occurs in the
modulation stage of the CB radio itself. An amp will amplify the
noise, add it's own noise, or both.

>>And overdriving an amp is ALSO a cause of

In reference to the power rating of amps, you said, "Watts are watts, regardless of how they are measured. Refer to them as RMS, PEP, or BIRD, as you have in the past...watts are watts". But, as always, you are wrong. And, as always, I set you straight.

>>With an AM radio that does 4 watts

>
>>modulation.
>
>
>No one claimed otherwise, but a sideband education from you would be
>better received when you demonstrate a competent grasp of
>mag mounts and fiberglass antennas that are at times prone to exhibiting
>more RFI than metal antennas.

Instead of introducing a new issue (RFI of metal vs fiberglass), try real hard to focus and address the issues at hand.

>Besides, never was there an amp that required 1200 watts to achieve 100%
>modulation. Your modulation precentage is not dependent on an amp no
>matter how you slice it.

You didn't even read it, did you? I'll try to make this as simple as possible: If you want to run AM with a 300 watt carrier and 100% modulation peaks, your amp must be capable of at least 1200 watts PEP or it will clip (splatter/harmonics). That's just the way things are. It's called 'physics' and it's taught at most institutions of higher education.

>And how DO you expect to get 1200 watts from a 300 watt amp on AM,
>Frank?

My point exactly!

>inferior product.

'inferior' is a relative term. Regardless, I never limited my remarks to the Wilson brand.

> AS usual, the world disagrees with you, as do the
>majority of competent antenna designers, electrical engineers, and
>amateurs.

I cited other cases of argumentum ad populum as part of an 'inductive argument', and it is very relevant. As far as your claim that "the majority of competent antenna designers, electrical engineers, and amateurs" as having professionally evaluated the quality of -any- CB antenna and going on record with their conclusions, well then maybe you should hook up with Sean and his 5000+ CBer friends in the greater San Diego area.......

>In fact, the Pentagon and US government just hired Lockheed Martin to
>DESIGN, CONSTRUCT, and implement THE definitive communications system
>for the USA is the war on terror.,,

And both Mattel and GM made M-16s for the U.S. military. What's your point?

>supercedes the top minds of the US military's choice for communications.
>It is Lockheed Martin and all their engineers, scientists, etc. and the
>US military who is wrong and you who are correct.

Show me where "Lockheed Martin and all their engineers, scientists, etc. and the US military" claims Wilson's mag-mount is not an inferior product and I'll agree with you. Until then, keep looking for those mag-mounts on tanks, amtracks, aircraft carriers, etc. When you find one, post the pic. Even better, email me th..... oops, I forgot, you are too chicken to send me an email.

>>so you should know that 18' of

>between coax length and capacitive coupling with the 18 ft coax of a
>Wilson Mag Mount. In fact, you have wandered off topic so many times
>that coax length wasn't even mentioned except by yourself...LOL.

Again, you couldn't understand what was written. And again, I'll simplify this so you can understand it: A mag-mount can't provide an antenna ground, so the antenna ground is 'faked' just like any other NGP antenna by using 18' of coax. Now, did you understand that or is your mind so feeble that it needs to be spoon-fed to you?

Gee, you put 12 watts through a preamp that only works in receive?
Well, I'll assume you meant to say that you can 'hear' the east coast
using the preamp. Regardless, I can understand the P-S and TRC needing
a preamp because their front-ends were inferior (despite the fact that
both had the support of independent tests and legions of loyal
customers). But if your Washington receives better with the preamp
then you really need to get it fixed.

Yes. Or you might try a longer antenna. Both will improve your
performance, but I would opt for the latter.

> Here is a link to a picture of the mount I
>made: http://members.cox.net/cppprogramming/ebay/tacoma.jpg

I don't know what you are using for that spacer, but as long as the
bolts are making a good ground connection to the steel it looks fine.
Don't forget to waterproof that coax connector. I don't know if they
make rubber boots for those connectors, but it's easy enough to drill
a hole in the bottom of a small tin or aluminum can, then reassemble
the mount through that hole with the can upside down. I may not have
explained that too well so I'll draw a diagram if you want.

IOW, a 300-watt amp will do 300 watts PEP, which translates to a maximum of 75 watts RMS (AM carrier power). Push it any harder and you will get a bigger carrier, but you start clipping well below 100% modulation, splattering your signal across the spectrum. -

>Bingo.

Watts are watts, regardless of how they are measured. Refer to them as RMS, PEP, or BIRD, as you have in the past...watts are watts. With many radios, the blue faced palomar 250 will sing 100 watts all day long without bleeding and they are very cheap.

>Is the amp rated for 100 watts peak, or dead

>key? It DOES make a difference.

Wrong,,the manner in which you measure watts does NOT make a difference in the action of the amplifier or radio.

> An amp rated for 100 watts PEAK, can do no

>more than 25 watts of carrier power, if you

>want to make 100% on the modulation side. A

>100 watt dead key rated amp, will be capable

>PEP requirement for an AM signal at 100%

>modulation.

Besides, never was there an amp that required 1200 watts to achieve 100% modulation. Your modulation precentage is not dependent on an amp no matter how you slice it.
And how DO you expect to get 1200 watts from a 300 watt amp on AM,

>I'm not going to comment on the other "points"
>of this post,

Good, as it has been shown he was way incorrect.

> but you really need a refresher course on AM

>fundamentals, before entering into this

>discussion.

(Sigh),,,now your posts "suddenly" turn to that of MEMEMEMMEMME and not of the topic..LOL. Try educating your own ignorance prior to taking another to task..you needed a refresher course on the rules and regulations of the FCC (courtesy of twistedhed) pertaining to roger beeps, but that didn't stop you from entering that discussion and insisting your ignorance was correct, hypocrite.

> At least if you want to avoid tasting shoe

>leather.

Like you, Davey? Shoot, what you post has to be taken as a joke,,,you lie like a rug.,,,you were shown last week to be a notorious liar by posting to the group under phantom names right after you swore yourself a new backside that you never posted under any other name and that you access the group in the same manner ALL the time,,,,,hehe,,need to see it again? It wouldn't have been pertinent at all, but it serves to illustrate your massive lies and personal problems that you just can't seem to get past....

>A 100% modulated signal WILL HAVE a peak

>power equal to 4 times the carrier power.

>The point that Frank was trying to make,

>.which you obviously didn't get,

>was that if you are driving a 300 watt amp,

>and outputting a 300 watt carrier, there is no

>headroom left to provide for the 1200 peak

>watts necessary to achieve 100% modulation.

LOL,,,I didn't take issue with that point, The points that you "obviously" can't grasp are moot with you. You're an Extra who had to be told roger beeps were not illegal on cb,,,,all these years they have

been legal and you failed to keep up with the pertinent laws, rules, and regulations and had to be informed and educated by a lowly cber regarding radio law and rules.....IOW,,,you know little and proved such beyond a shadow of a doubt.

>If your amp puts out a max of 300 watts, then

>you should drive it so that the dead key output
>power does not exceed 75 watts of power, if

>you hope to present an undistorted 100%

>modulation output.

>Those are the facts. Twist, distort, back pedal,
>or obfuscate all you want, but you can't run

>from RF theory.

No one took issue wiht the RF theory, just Frank's incorrect tripe. The facts, hypocrite, are that you are not only ignorant of FCC rules, laws, and regulations, but awfully frustrated to be flaming another when you can't even get your own act together. Now, go post from ptd net under a phantom name, deny you did it, and wait for someone else (not me) to call you on it and show what a lying scumbag you are.

Whoever drove that car can easily become a NA$Cball champion. I am fucking serious. If you can do that kind of driving in a piece of shit Rustang; you have a career in NA$Cball ahead of you. If he can get out of prison, that is.....

Impressive. Double bonus points for the driving!

I did a 360 on the highway once, in a chevy vega wagon.
I hit a wet spot changing lanes, and the cheap tires caused me to
hydroplane.
I was able to run it all the way around, and carry on.

I remember looking at the driver in the lane next to me, when I was
backwards. LARGE eyes :)

I cant get the SWR down below 2.5. I ran a new 18' cable and a ground wire to the frame of the truck but ever time i key up the ANT light lights up on the radio.
My questions are:
1. How can I get the SWR down?
-
>Just three words: Grounding, grounding, and

>grounding. You need to ground the radio AND

>the amp AND the antenna.

The antenna is already grounded. A Wilson mag mount needs no additional ground.

>A magnet isn't a any type of electrical

>connection at all.

Try again,,s-l-o-w-e-r. A Wilson mag mount needs no additional ground. That you erroneously feel that "electrical connection" and "ground" are interchangeable and synonymous
doesn't make the two terms mutually exclusive.

> Some have been duped into thinking there's

>a capacitive coupling between the magnet and
>body through the paint, but fail to realize that

>the magnet itself prevents any capacitive

>coupling. That's why most mag-mounts come

>with 18' of coax yet frequently show high

>SWR.

Wrong. The length of coax has absolutely nothing to do with capacitive coupling in a mobile application.

>I didn't say anything of the sort. First I said the

>magnetic mount does not function as a ground
>coupling, which it does not. The only practical

>and widely used alternative to a proper ground
>is the use of a specific length of coax (18'),

18 ft of coax is the alternative to a proper ground?
HAHAHAHHHAHHAHAHHAHH! No ownder N3CVJ is a fan of yours, neither of you know much about cb OR grounding...you both are full of intentional disinformation.

>which is exactly what the mag-mount

>antennas rely upon for an antenna ground.

Man,you are lost.

-
In addition, "most" Wilson mag mounts
do NOT show high SWR. You not being familiar with something should clue you in that you're not qualified to judge it. You have given poor advice and incorrect advice concerning this item.

>Again you are twisting my words. I said, "most

>mag-mounts come with 18' of coax yet

>frequently show high SWR".

Exacty,,,and MOST mag-mounts that come with 18 ft of coax do NOT frequently show high SWR.

>I did not say

>"most" mag-mount antennas show high SWR,

"Frequently" means more than not, whic constitutes MOST. It is not my fault you are not adept at making yourself and what you mean very clear. What you said, is not whatyou profess to mean,,,communication deficit.

>nor did I limit this characteristic to Wilson

>mag-mount antennas.

That was the antenna in question.......try and remain relevant.

>And unless the antenna is a dummy load,

>you can move the cable around and watch the
>SWR needle wander.

Again,,wrong. And if you can "move the cable around and watch the swr needle wander" on YOUR mobile application when using a mag mount or anything else, you need a consult a technician who doesn't claim a relation between coax length and "capacitive coupling" when applied to a correctly installed Wilson mag mount.

>You have obviously never done such a test.

>Or maybe you have but you work for Wilson.

You said Twist worked for pop comm AND monitoring times
Control yourself, Frankie,,,it's not about someone else whenever you are wrong. Someone else schooled you and clued you in that touching the coax shouldn't change the swr in your presented and incorrect application, but your ignornace, of course, is my fault.

>Fact: Mag-mount antennas have piss-poor

>ground connections.

Fact: In all but the most notable exceptional applications, the grounding of a mobile mag mount, specifically a Wilson, is more than adequate for its intended use.

>I'll agree to that 100%.

You claimed that it wasn't properly grounded and until it was, troubleshoooting could not take place..

>And I'll add that many people try to use the

>same antennas beyond the limits of their

>intended use -- people such as the OT.

Please check the watts rating for the Wilson. This is not the case, as the line was constructed intending to handle many more watts than the cb puts out.

>By "grounding" I

>mean an "RF ground".

You can make it "mean" anything you wish and your little black heart desires but the fact that the antenna doesn't meet with your personal approval doesn't change the hard facts that only you have a problem with accepting the tried and true test data that has been widely accepted across the radio spectrum world by real engineers, designers, and users worldwide.
>I haven't seen this "tried and true test data that
>has been widely accepted across the radio

>spectrum world by real engineers, designers,

>and users worldwide". Got a link?

Two clicks,,,google and Wilson antenna,,,,view the Lockheed Martin test.

>At 27MHz, this means

>mounting the radio and amp directly to the

>chassis and/or using grounding straps that are
>no more than a few inches long. Only after

>your system is properly grounded can you

>address any other issues.

Nonsense. One can mount the radio in a slide mount and to make it
temporary or it can be mounted in a permanent manner.

>Nobody said it couldn't.

You said the radio must have a ground strap running to the chassis in
order to be properly "grounded",,this is untrue.

>I said the radio and amp should be mounted

>"directly to the chassis and/or using grounding
>straps that are no more than a few inches

>long", which is true if you want to keep the

>radio and amp chassis at RF ground. And

>keeping the radio and amp at RF ground is

>highly suggested for many reasons, not the

>least of which is to keep RF off the coax

>(-especially- when using a mag-mount or NGP
>antenna).

No Frank, thats not what you said at all, you said the Wilson was an
inferior ground and one could not troubleshoot the "system" without a
proper ground that you insist take the form of a strap to chassis.

>A slide mount is fine if

>the receiver half is mounted to the chassis (or

>with a very short grounding strap).

Sure, that's another way of many, but proper grounding doesn't always
necessitate the radio be attached to the chassis.
It can be mounted
to the dash and a myriad of other places.

>Strip the plastic and vinyl from the dash, and

>behold... the chassis!

>The chassis also exists in a "myriad of other

>places".

And the chassis is not the be-all end-all answer to ground as you mistakenly profess. In fact, the lack of a ground strap to chassis in the described
application probably has nothing at all to do with the SWR he is seeing, but with you not being familiar or educated on Wilson antennas and their characteristics and properties and performance, such balderdash is to be expected from voodoo wannabe techs like yourself.

>Grounding may or may not be the problem, as
>I stated previously.

Thats not what you said.

> But as I -also- stated previously, the system is
>far easier to troubleshoot when the system -is-
>properly (RF) grounded.

I felt your breeze from that hasty back-pedal, Frank,,you said one could NOT troubleshoot without the proper ground and you claimed the Wilson mag-moun was NOT grounded. Being "easier" was not what you said, you said it could NOT be done.

-
 Bottom line,,the radio
does not need
directly mounted to the chassis in order to provide adequate grounding.

>No, not if you run a balanced system in your

>mobile.

In fact, this is less
practical and not the manner of which the majority of cb installs are complete.

>The only thing impractical about properly

>grounding the system is the little bit of extra

>work that is involved. A plug-n-play system will
>work for the average Joe Schmoe,

Which encompasses your "average" cber,,,,if one wanted something more than plug and play, they can get a ham license.

> but if you want performance (high efficeincy,

>power amplifier, etc) proper grounding is

>essential.

High performance from what you referred to as "cheaply built linears", Frank?

>If it wasn't it wouldn't have been stressed as

>such in all the literature ever written about

>radio since the days of Marconi.

The average cber doesnt read Marconi,,,,,in FACT, the "literature" (directions for install) that comes with most cb and export radios stresses nothing of the sort other than negative and positive connections with a fuse.

>It's very practical.

Try it again,,,,s-l-o-w-l-y. I said it was "less" practical.

>It just takes a little extra effort.

So does educating you on matters you know nothing of, but you appear to get frustrated and angry when someone tries to clue you in on matters you know nothing of, but your low self-esteem and briused ego kicks in and takes over and you become hostile and adamant and insst on keeping your mind closed. It's almost as if you piss yourself off when you don't know something and you can't stand to be informed by anybody. In fact, in the past when you have been wrong and corrected, you hurled insults and called names and attacked those who have corrected you in the past, calling them voodoo technicians. As always, you attack the person because you have nothing to attack the topic with.

>Observation: The topic is a technical

>discussion about amps, antenna

>grounding, overmodulation, etc; yet you felt

>the need to deviate and attack my history of

>exposing voodoo techs.

You ARE the voodoo tech, You give incorrect information, have for years, and when corrected, you turn the topic to the poster and oftheir personal matters,,,,you'e done it for years. Are you turning over a new leaf and no longer engaging in such unproductive behavior? See, the topic was one of a Wilson, amp, and a swr reading whcih you morphed into one of modulation (nothing to do with his swr), bad information on grounding and troubleshooting, and generally incorrect about the Wilson all the way around, including the watts they were constructed to carry. You're wrong and writhing.

_
Yes, that is but ONE manner of grounding your radio, but not the only manner in which to achieve proper ground..

>And those other issues can be many.

Almost as many as there are ways in which to mount the radio other than mounted directly to

the chassis.

>For example, your 'bumped' Cobra may have

>been 'bumped' by a moron; your Palomar may
>have a detuned input or output, a bad power

>transistor, or even worse it might be

>self-oscillating; you might be using cheap coax
Well, if one is using a coax like you are familiar with (one that makes the SWR move when you touch the coax) then yes, I'm certain you are using cheap coax, among other problems.

>A poorly grounded system can have RF on the
>shield regardless of the quality of the coax.

>And even cheap coax (even RS RG-58) will

>work as intended if the system is properly

>grounded.

Remember,,we were speaking of the Wilson and the swr should NEVER move when the coax is touched or moved as you claimed.

>(never use foam!); you might have a bad

>antenna; etc. But regardless of the problem,

>it's always easier to troubleshoot if the system

>is properly grounded.

LOL,,,a second reaffirmation of your back pedal. Remember, you said it was NOT possible to troubleshoot the "system" without a proper gfround and that the wilson was NOT properly grounded.

*2. Is this a good combo?

>Not really.

Sure it is. Palomar amps work quite well.

>When fed with the correct input levels.

Backpedaling as a disclaimer to your self-contradictions again,,,, Nevertheless, you didn't tell him this, you told him it was "not really' a good set up, knowing nothing of the input levels other than he had a peak and tune that could consist of a lowered dead key and a higher swing.

>Most people are capable of reading within the

>context of the entire post.

And only you inferred these non-professed input levels were unacceptable how?

>A radio

>that has been "bumped"

>mean it has been tweaked for more power)

>may easily exceed the maximum input levels

>for the amp. Even 4 legal watts will overdrive

>most of the smaller amps.

Here you go again, way off base speaking that of which you have no clue or personal experience. The Palomars are hearty little amps and can take more than the four watt drive input. In fact, they can take DOUBLE the 4 watt drive with no adverse effect.

>If you mean they won't smoke, you are

>probably right.

If you had any personal experience or hands on experience with these things you would KNOW I was right and not have to guess at things you have no expereince with.
I mean it works just fine with no adverse effect.

>But the max input power before clipping is

>determined by the max output power and the

>gain of the amp, not by an arbitrary "DOUBLE

>the 4 watt drive" rule of thumb.

Where did you get this rule of thumb, from? Regardless, this is yet another example that doesn't "overdrive" the cheaper amp with "anything more than 4 watts" Of course you can come back and claim your definition of overdrive is different than the overwhelming majority as is usually the case, but doubling the 4 watt drive is hurting NOTHING and causing no adverse effects to the amp. If it was hurting the amp or modulation or the receive on the other end (recognizable by ear), then the majority would consider that "overdrive". With no problems and years of trouble-free operation and compliments on signal and audio,such is not considered "overdrive", except, perhaps, by yourself.

>The makers of these cheap linears

>(that usually aren't very linear at all) don't tell

>you that the power rating is for -peak- power.

LOL,,umm,,that's how amps are rated.
You used the term linear, he called it an amp.

>Unless his Cobra is capable of FM, your point

>is moot.

Lucidity is escaping you, OM. *You* spoke of linearity and FM, no one
else. Remain relevant, if you dare.

>I used the term 'linear' synonymously with

>'amp' because in the context (something you

>have always had a problem understanding) of

>this forum they -are- synonymous. Only you

>made the distinction between 'linear' and

>'amp',

Lucidity problems plaguing you badly. You are the one that brought up
linearity, which absolutely and automatically makes the distinction
among amplifiers,,hence, separate classes of amps.

> and I addressed your nit-picking: If the amp is
>not intended to be linear then it is not intended
>to be used with the common CB modes of AM

>and SSB.

Intentions and applied use are separate matters. You just learned that
concerning the watts rating by the manufacturer of Wilson.
Go ahead and tell the world how all those cb amps, such as Davemade,
Pride, Skullcracka, Palomar, Texas Star, Foxie, Cookie, etc, are all
linear.

>Non-linear amps are good only for FM and

>CW. And if you tried to focus a little harder I

>wouldn't be explaining this to you as if you

>were a boot CBer.

You haven't explained much , Frankie,,you've ran from your claims,
changed exactly what you originally said, and expressed frustration over
your ignornace concerning the Wilson antenna, grounding, amplifiers and
their applications.

_
One that is familiar enough to add new coax to a Wilson is more than
likely already aware of
this.

>IOW, a 300-watt amp will do 300 watts PEP,

>which translates to a maximum of 75 watts

>RMS (AM carrier power). Push it any harder

>and you will get a bigger carrier, but you start

>clipping well below 100% modulation,

>splattering your signal across the spectrum. -

Watts are watts, regardless of how they are measured. Refer to them as RMS, PEP, or BIRD, as you have in the past...watts are watts. With many radios, the blue faced palomar 250 will sing 100 watts all day long without bleeding and they are very cheap.

>A common misconception,

And again, its your common misconception. I fact, you have exposed several of your "common misconceptions" in this thread.

>hence the frequent

>and continuing occurances of RFI, and the

>increasing popularity of LP filters.

The majority of RFI cases are NOT from cb,,,

>Again, I made no such claim. What I said was

>that overdriving amps is becoming more and

>more common because of users that are

>uneducated as to their proper use.

So if the cases aren't from cbers, who are all these mystery usersyou claim are becoming more and more common with their uneducation concerning amplifiers and their proper use???

>I said nothing about "the majority of RFI

>cases".

Ok,,let's use YOUR term,,"occurances" (SIC)...try it again,,the majority of "occurences"

in fact, the complaints and
actions to the FCC concerning CB "bleed" or RFI is less than one half percent of total complaints lodged with the commission and even LESS get acted upon. As if that wasn't enough to stop you talking through your arse.............claiming LP filters are suddenly seeing a surge in popularity by the "cheap linear" crowd is hilarious, but then again, you are in a dark room with a loaded gun shooting wildly just hoping you can hit something.

>You may actually have a point --

Which was merely illustrating your self-contradictions.

>it's very possible that ampheads are becoming
>more complacent regarding RFI due to the

>FCC's lack of enforcement.

And since when have LP filters become "increasing in popularity" by the cheap linear crowd? By what standards do you judge this? You have claimed those using the cheap linears are cbers who don't give a damn about bleed, so why would these same people suddenly begin purchasing LP filters?

>To keep the neighbors from getting pissed?

In the past, you have said they don;t care. Now you profeess they suddenly begin to care? Out of complacency? Man, you are disagreeing with yourself all over the place. The fact is, you;re really not sure of much, Frank, but I'm going to allow you the position to provide once again for the bullshit you are already sorry you posted......by what information do you claim this increased surge in lp filters among the cheap amp user crowds (which you claimed were NOT cbers, but failed to identify this "mystery" group responsible for these increased sales)?

> To stay off the FCC's radar? To keep big, fat

>BEs like me from knocking on their door?

Which group is this? Who on earth would this group of cheap amp users, who aren't cbers, try and prevent anyone like you from knocking on their door? You're not a factor in other people's lives unless they permit it, no matter how much you try.

-
You also appear to be incorrect pertaining to modulation, as there are many instances pertaining to cb, when one wishes to achieve loudest optimum modulation, a power mic is required. Many times, this can cause the bleed over to begin. Remove the power mic in many applications, and the bleed can often be removed. I don't expect you to follow, Frank, you're still smarting after having your head handed to you after making the stupid comment that fiberglass antennas can have nothing to do with bleed issues.

>CB radios have modulation limiters which

Run like hell from that original topic, Frank,,,,,<g>

>prevent modulation from exceeding 100%

>(usually set for 90-97%). A power mic may clip
>and distort the audio, and if that happens just

>turn down the mic. But if the limiter has been

>disabled (as some monkey-techs like to do,

>one of their stupid "CB tricks"), the result is

>that the RF will start clipping and/or become

>unsymmetrical, both of which cause

>harmonics and 'splatter'.

In conjunction with amplifiers, this indeed can occur. With a barefoot 3 or 4 watt cb rig, any "splatter" or harmonics you refer become negligible and not a factor.

>It occurs regardless of the use of an amp

(sigh) Not true. In many, many instances, a station that NEVER bled before can suddenly begin to bleed when an amplifier is added.

>because it occurs in the modulation stage of

>the CB radio itself. An amp will amplify the

>noise, add it's own noise, or both.

Hence, no amplifier, no amplified noise, which means,,,taa daa,,,,,,,,a barefoot rig that bleeds with an amp often doesn't amplify the noise on its own enough to become a bleed factor.

>And overdriving an amp is ALSO a cause of

>harmonics, as I described before. Cheap CB

>amps like the Palomar are rated in watts PEP,
>even though they don't specify them as such.

>The way to tell is to look at the spec sheet of

>the power devices (transistors) and find out

>how those are rated, which is usually for PEP.

>That is the case for the Palomar in question.

>The difference is that AM is measured in

>RMS.

Umm, Frank OM, you are the only one enjoying a discussion with yourself concerning how watts are rated. It wasn't mentioned (except by yourself).

>In reference to the power rating of amps, you

>said, "Watts are watts, regardless of how they

>are measured. Refer to them as RMS, PEP, or
>BIRD, as you have in the past...watts are

>watts".

But, as always, you are wrong. And, as always, I set you straight, cocerning the input rating of the palomar, the grounding of the Wilson and a few other items, such as Lp filters.

>With an AM radio that does 4 watts

>RMS (which is also the carrier power), it

>outputs 16 watts PEP at 100% modulation. So
>if your AM radio is driving your 300-watt amp

>to 300 watts carrier -without- modulation, the

>result is some big-time distortion because the

>amp is incapable of meeting the 1200 watts

>PEP requirement for an AM signal at 100%

>modulation.

No one claimed otherwise, but a sideband education from you would be better received when you demonstrate a competent grasp of mag mounts and fiberglass antennas that are at times prone to exhibiting more RFI than metal antennas.

>Instead of introducing a new issue (RFI of

>metal vs fiberglass), try real hard to focus and

>address the issues at hand.

That's fine, but you took the initiative to introduce new issues such as modulation, lp filters, liearity and other mag mounts when we were discussing specifically the Wilson All these topics had nothing to do with the issues at hand, but since you permit yourself to introduce new topics and draw analogies only you can grasp, you should at least extend the same courtesy to others and allow them the same behavior you initiate and employ. If you were to do that, you would not be such a flaming hypocrite.

-
Besides, never was there an amp that required 1200 watts to achieve 100% modulation. Your modulation precentage is not dependent on an amp no matter how you slice it.

>You didn't even read it, did you? I'll try to make
>this as simple as possible: If you want to run

>AM with a 300 watt carrier and 100%

>modulation peaks, your amp must be capable

>of at least 1200 watts PEP or it will clip

>(splatter/harmonics). That's just the way things
>are. It's called 'physics' and it's taught at most

>institutions of higher education.

Has nothing to do with the orignal topic and absolutely noothing to with the palomar which you erred on concerning input power.

-
And how DO you expect to get 1200 watts from a 300 watt amp on AM,
Frank?

>My point exactly!

You're the only one rambling about amps and watts.

>You should have had your Cobra 'dumped'

>instead of 'bumped'.

That's a personal opinion coming from one who doesn't know any better
and bases his technical advice on nothing but personal emotion. Slight
peaking and tuning is perfectly acceptable when done by a competent
technician. In fact,
Many cb radios can use a tune-up alignment after being shipped.

>Most experienced ampheads have their radios
>'detuned' for -lower- output power to prevent

>overdriving the amp. That's a fact, not my

>personal opinion.

Do try and remain relevant. You are so obsessed with amplifiers even
when no one mentions them. Let's try it again for your benefit, shall
we? You said, "You should have had your Cobra dumped instead of bumped"
and I gently pointed out that is a personal opinion based on your strong
presonal emotions you have a difficult time controling. As always, you
wandered off topic and began babbling about "ampheads".

>My statement was perfectly relevant since the

>OT is running an amp.

It was not in context with your emotionally biased retort of "dump the
Cobra" and had nothing to do with it and still doesn't.

>As for a mag-mount, personally, I wouldn't

>waste my money.

Again, you don't know any better. Many of us have talked around the
world on mag mounts, barefoot, on a regular basis. Mag-mounts are great
solutions for temporary mounts, rental cars, quick disconnects, etc.
Money spent on a Wilson is not wasted.

>It is to me because I don't need temporary

>mounts.

Touche......only, you were allegedly giving advice to another.... it was
via your sockpuppet named ROCH, but thanks for clearing up that the
advice you were giving was actually to yourself.....

>To quote one of your favorite phrases, "Do try

>and remain relevant".

It is relevant, frankie, as why would you be giving advice to another that is tailored to your personal feelings?

>And no matter how

>much you need to believe otherwise, I don't

>use sockpuppets.

"I have admitted lying in this ng and on more than one occasion" - Frank C. Gilliland

–

> If I want to remove the antenna I just

>unscrew it. And I don't rent vehicles,

But of course you don't. After you told whatshisname that you couldnt afford to fly, that goes without say.

>"Do try and remain relevant".

You not renting vehicles and having no need for temporary mounts has nothing to do with the question to which you gave wrong, poor, and bad advice to. Relevance, Frankie, try and remain focused.

>I buy them.

And I don't build my boats, I buy them. Regardless, our personal nuances (even though you prefer to focus on them as opposed to pertinent topics) have nothing to do with other people finding the need to rent vehicles and having a need for temporary mag mounts, but then again, you are so out of touch with the majority of cbers you are unable to entertain any concept or scenario unless it appies directly to yourself....extreme narcissism and detached from reality.

>I provided my opinions with some facts to

>back them up.

You do no such thing. You have yet to provide for your claim that you work for a company legally allowed to transmit on the freeband. you have yet to provide for your claim that you were going to contact the companies assigned the freeband freqs and post the interference results you claimed they frequently experienced from illegal cbers. You have yet to post anything at all that supports your opinion that LP filters have seen increased sales by cheap amp users. The only thing you have ever provided, Frankie, are lies.

>Try it sometime.

You first, as that is how proper comunication works,,you make a claim, one asks you to provide. You must first answer the question posed to you prior to demanding another answer your belated questions and inquiries. Anything else merely illustrates your deficit in communication

technique, not realizing how proper decorum takes place concerning an exchange of communication and meaningful dialogue.

>But you have,

Again, a perjorative personal opinion of yours. Lockheed Martin proved the efficiency of the Wilson in independent tests. You should check their test data and you may grasp why they are so popular and have legions of loyal customers,,,they make a tight product that delivers what they claim.

>Phen-fen had the support of independent tests
>and legions of loyal customers....

>Firestone had the support of independent

>tests and legions of loyal customers....

>Asbestos had the support of independent tests
>and legions of loyal customers....

>DT had the support of independent tests and

>legions of loyal customers....etc, etc, etc.

Try and remain relevant, OM. Citing and invoking other products do nothing for your position of claiming the Wilson Mag Mount is somehow an inferior product.

>'inferior' is a relative term.

Fine,,lets use your term..."Improper ground".

> Regardless, I never

>limited my remarks to the Wilson brand.

Corect, you went off tocpi to the original antenna discussion as soon as you realized you were in an area which you had no experience, hands on or otherwise. Nevertheless, you were taught you were wrong concerning the Wilson.

–
  AS usual, the world disagrees with you, as do the majority of competent antenna designers, electrical engineers, and amateurs.

>I cited other cases of argumentum ad populum
>as part of an 'inductive argument', and it is

>very relevant. As far as your claim that "the

>majority of competent antenna designers,

>electrical engineers, and amateurs" as having

>professionally evaluated the quality of -any-

>CB antenna and going on record with their

>conclusions, well then maybe you should hook
>up with Sean and his 5000+ CBer friends in

>the greater San Diego area.......

Once again, your ignorance runs ahead of your boot lip. The Wilson is
not a cb antenna.

_
In fact, the Pentagon and US government just hired Lockheed Martin to
DESIGN, CONSTRUCT, and implement THE definitive communications system
for the USA is the war on terror.,,

>And both Mattel and GM made M-16s for the

>U.S. military. What's your point?

That the independent tests by Lockheed were undermined only by yourself.
They were good enough for the military and the world of radio, engineer,
and antenna gurus, but not yourself.
I guess the point is self-explanatory, Lockhheed Martin knows what they
are talking about and you don't.

-
but never mind that,,,,,YOUR opinion
supercedes the top minds of the US military's choice for communications.
It is Lockheed Martin and all their engineers, scientists, etc. and the
US military who is wrong and you who are correct.

>Show me where "Lockheed Martin and all their
>engineers, scientists, etc. and the US military"

>claims Wilson's mag-mount is not an inferior

>product and I'll agree with you.

Who cares what you agree with? You have already professed and proven
your ignorance on the subject of Wilson antennas and the testing
validity of Lockheed Martin.

>Until then, keep looking for those mag-mounts
>on tanks, amtracks, aircraft carriers, etc.

You look for them, this is your fantasy.

>When you find one, post the pic. Even better,

>email me th..... oops, I forgot, you are too

>chicken to send me an email.

Always looking for something that only you conjure.

>so you should know that 18' of

>coax isn't a reliable substitute for the terrible

>grounding characteristics of mag-mount

>antennas.

Again, only *you* were the one that tried to say there was a relation between coax length and capacitive coupling with the 18 ft coax of a Wilson Mag Mount. In fact, you have wandered off topic so many times that coax length wasn't even mentioned except by yourself...LOL.

>Again, you couldn't understand what was

>written.

No, that was you, so much in fact, you solidified the notion by seeking mag mounts on military vehicles. Because the company of :Lockheed Martin did a study showing the efficiency of the Wilson mag mounts, and becuase they were commissioned by the military to construct their new communication system, doesn't mean they will make mag mounts for the military. In fact, you not understanding what you read is always a problem,,,goes back to that simple twist of fate you suffer..a massive comunication deficit.

>And again, I'll simplify this so you can

>understand it: A mag-mount can't provide an

>antenna ground, so the antenna ground is '

>faked' just like any other NGP antenna by

>using 18' of coax. Now, did you understand

>that or is your mind so feeble that it needs to

>be spoon-fed to you?

LOL...I'm not the one experiencing hallucinations of mag mounts on military vehicles,,,you are. And 18 ft of coax does nothing at all,,,nothing.

>If you want real power you need a

>real antenna, not a glorified refrigerator

>magnet.

"Real" is a relevant term. The Wilson will have no problem with the amplifier he is using.

*3. on my amp it has a ON/OFF , HIGH, MED, LOW and a PRE-AMP on and off.
  What is with the PRE- AMP.

>The pre-amp is used to amplify the received

>signal. They are mostly worthless because the
>usually much better than the S/N ratio of the

>pre-amps. IOW, they will just make the noise

>louder. However, they work great for older and
>low-end transceivers, and simple homebrew

>receivers.

The pre-amps are worthless by no means. They work absolute wonders when the needle is flat with no noise for those extreme fringe stations. I've used a cheap pre-amp on a regular basis to talk to the east coast of Fl late at night,,,BAREFOOT.

>That's because you run a Tentec.

Not with the pre-amp I don't..no need. I run a lot of radios. In fact, it (the pre-amp) works the same on my Pearce Simpson as it does on the Rat Shack TRC-30A as it does on the Washington. The only radio I dont use an external preamp with IS the Ten-Tec....no need. Using a preamp late at night on 38 low I can often hit the east coast with 12 watts.

>Gee, you put 12 watts through a preamp that

>only works in receive?

Yes, preamps only work in receive, Frank, as that is what they were designed to do.
12 watts would be the output of the radio, Frankie..nothing to do with the preamp.

>Well, I'll assume you meant to say that you

>can 'hear' the east coast using the preamp.

Without the preamp I would be unable to complete the communication on many occasion.

>Regardless, I can understand the P-S and

>TRC needing a preamp because their

>front-ends were inferior (despite the fact that

>both had the support of independent tests and
>legions of loyal customers).

>But if your Washington receives better with the
>preamp then you really need to get it fixed.

Again, what little you know of cb and HF dx characteristics are wore on your sleeve, but you are learning slightly as we go. On many occasion, there are no voices, NADA coming from the speaker..a zero noise level completely silent, no matter WHAT radio is used. Click on the preamp, and voila,,,voices from the distance, still often with no or not much of a signal, but they can now be heard.

>Oh, and up North we have come up with a

>really cool invention that has been adopted by

>the vast majority of civilized society. It's called

>the "shoe".

Well, the quicker you remove mine from your arse the sooner you may lose your obsession and that bloated, anal retentive feeling that is responsible for your self-created misery.

-
*Ok I know I will take a beating from some of you and that is part of the game but any help or any suggestions would be great.

>Here's your beating: If you want to play

>hammie', get a license.

There you have it,,,,your problem with CBers..you feel running an amp is "playing hammie",,a feeling that is YOUR problem, no one elses, regardless of how you project your dilemmas onto others. Running an amp isn't "playing hammie" to all, just to those anal retentive status starved individuals.

>If you can't afford a license (about the price of

>a happy-meal), or if the test is too difficult

>(even when you are allowed to memorize the

>questions and answers before the test), then

>at least get yourself a book on the subject and
>learn what you are doing.

LMAO,,,,,piss poor advice,,,again. A no-code entry level license will teach him absolutely nothing regarding what he is "doing", as his doings are on HF.
Seeing as he can solder and change out a coax on a Wilson,

>He never claimed to have done anything of

>the sort.

Sure he did,,,he claimed he was "changing out the cable on the Wilson". See? It's not that difficult to focus, is it, even when you can't remember what was said or typed and make an ass out of yourself by denying what was clearly illustrated.

> Your communication deficit is acting up

>again, Twist.

You really are clueless of who you are talking to, Frankie.(hehe)..nevermind,,,,he indeed said he was changing out the cable on the antenna.
That you fail to retain what you read is all one needs to know

concerning who suffers the communication deficit, Frankie. I suggest you try reading the thread again s-l-o-w-l-y and come on back for that heaping of crow you enjoy me ramming down your throat. With all the bullshit you have given this dude, he may run like hell from anything hammie related, merely because someone like yourself is advocating it, and he wouldn't be blamed for doing so. It's just the manner in which you come across to all those you can't understand.

>You're just jealous because I haven't given

>you a good beating for a while.

You're forgetting things and rambling, blowhard, and once again, blaming me for your incompetence. I accept partial blame for your breakdown.

>Now go back to trollville and behave yourself

>until you are summoned for your next beating.

Beatings denotes violence,,,something you and scumbag KC8LDO have promoted and advocate against those you are not able to maintain rational debate with or control your emotive responses.

>"Do try to remain relevant".

Fine.

"I ahve admitted lying on this ng and on several occasion" _ Frank C. Gilliland

Hi...
Heard "B499, Tahiti" on 27385 kHz, LSB, the other day. He was working
"44" Tasmania and a couple of others.
Just thought I'd drop a line here on the off-chance Mr. B499 reads this.
You were coming in VERY nicely into Auckland.
Mark.

_
Tazmania has been a regular out there for the past few weeks. Try him
late at night.

Whoever drove that car can easily become a NA$Cball champion. I am
fucking serious. If you can do that kind of driving in a piece of
shit Rustang; you have a career in NA$Cball ahead of you. If he can
get out of prison, that is.....
Impressive. Double bonus points for the driving!
>I did a 360 on the highway once, in a chevy

>vega wagon. I hit a wet spot changing lanes,

>and the cheap tires caused me to hydroplane.

>I was able to run it all the way around, and

>carry on.

>I remember looking at the driver in the lane

>next to me, when I was backwards. LARGE

>eyes :)

_
Did the EXACT same thing as a kid in a huge Chrysler,,,,,was raining and
my front tire went off the road a bit,,I over-corrected and the left
rear tire of my car hit a wet spot just right and shot me like a rocket
into a fishtail down into the grassy median..I spun around FAST like 4
or 5 times while barreling down the center grass median at around 60
miles per hour....when the car came to a rest mud was all throughout the
interior, as the back windows were slightly down. If it wasn't for the
mud, there is no question I would have flipped many times instead of
spinning 360's...

Amateur Radio Newsline™ Report 1407 July 30, 2004

Amateur Radio Newsline report number 1407 with a release date of Friday, July 30, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The ham bands get clobbered by the sun and some of the results are amazing. Find out the details on Amateur Radio Newsline report number 1407 coming your way right now.

(Billboard Cart Here)

**

ON THE AIR: GEOMAGNETIC STORM AND HAM RADIO

A huge geomagnetic storm has hit the Earth, wiping out a lot of High Frequency communications. At the same time its making the VHF and UHF bands a veritable D-X playground. Bill Pasternak, WA6ITF, has more:

--

According to a propagation bulletin issued on July 25th by CQ Magazine's Tomas Hood, NW7US, the estimated planetary K index reached a level of 8, with the Bolder, Colorado K reading a level 7. Translated into everyday talk, that's one heck of a solar storm and it does odd things to radio communications. All you need do is turn on a 6 or 2 meter CW or SSB radio to hear it for yourself.

Solar storms bring with them an increase in Aurora and Aurora based communications. Reports over the VHF Reflector say that this one was no exception. According to Dave Wenner, K3KEL, in Benton, Pennsylvania, his 150 watts to a homebrew 9 element Quagi antenna made it possible for him to make dozens of 144 Mhz contacts. These ranged from Maine across to Missouri plus Nova Scotia, Quebec, and Ontario Canada. Dave's posting said that he did not work any stations to the South but that they were there. He says that he heard K4QI in North Carolina's grid FM06 very strong toward the end of the session.

Wenner's was typical of the reports posted to the VHF Reflector. Many of them said that this was the best Aurora session heard in years.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

How long does a solar storm like this last? NW7US reports that as Saturday, July 25th progressed, the geomagnetic field again became highly active and reached storm levels. He says that it has continued to get more intense, reaching very high storm levels. As the week progressed more Aurora contacts were reported world -wide with some on the 222 Mhz band and above. (NW7US via VHF Reflector)

**

PROPAGATION: IS THE SUN HARMING EARTH

Meantime the CGC Communicator cites an interesting propagation report. One that says Greenland's ice cores indicate that the sun is more active now than it has been at anytime in the past 1,000 years.

That report also says this has caused a warming trend here on Earth. As a result of this and other solar observations the pseudo-science doomsayers have been quick to jump on the gloom and doom bandwagon. They are out there predicting dyer consequences for those of us living here on the surface of our home planet Earth. But is any of this based on reality? That's what RAIN's Hap Holly asked CQ's Thomas Hood, NW7US:

--

Audio report only. Hear it in the MP3 version of this newscast downloadable at http://www.arnewsline.org/quincy

--

Hood says that you should enjoy the radio talk about the phenomena but not to take it seriously. (CGC, RAIN)

**

ON THE AIR: THOMAS HOOD ON RAIN

By the way, you can learn a lot more about radio propagation and the effects of solar radiation on communications from Thomas Hood on this weeks RAIN Report. Its available right now on-line at www.rainreport.com or on the phone at 847-827-7246. You can read the article referred to by the CGC Communicator at http://news.bbc.co.uk/2/hi/science/nature/3869753.stm (CGC, RAIN)

**

VHF AND ABOVE: ARRL MULLS CVHF/UHF CONTEST RULES CHANGES

ARRL Director Tom Frenaye, K1KI, has also posted some interesting information to the VHF Reflector. He says that says that the work done by the VHF-UHF Contests/Awards Subcommittee has been completed. That the written report and along with some in-person additional comments were given during the ARRL Board's Program & Services Committee meeting on July 15th. That's just before the ARRL Board meeting that began on July 16th.

Frenaye says that the Program & Services Committee did not take action on the report and will study it during the next several weeks. In the mean time, the committee agreed with him that the report should be posted to the VHF reflector public consumption. It will also be sent to the Contest Advisory Committee for information and possible comment.

What will happen from here? Frenaye says that the Program & Services Committee will work with the Membership Services Department in Newington to take the recommendations any further. He says that some rules may changes and some may not. Except for possible changes to the 2004 E-M-E contest, K1KI does not believe you'll see any major contest VHF changes until 2005. He also notes that some recommendations may have to wait until budget resources are made available. The full ARRL Board does not normally get directly involved in contest rules issues as contest rules are usually not policy matters. (K1KI via the VHF Reflector)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the K8KZO repeater serving Portage Michigan.

(5 sec pause here)

**

HAM RADIO IN SPACE: ECHO ON THE AIR

I'm Bruce Tennant, K6PZW, with some breaking news that hams worldwide have been waiting to hear. This, as AMSAT announces that its new Echo satellite, now renamed AO-51 will be turned on for general use in FM repeat mode on July 30th at about 02:15 UTC.

Echo will be on for a trial period of about three weeks. During that time command stations will be watching the power budget and adjusting the UHF transmitter output as needed for management of the battery supply. Initially, the transmitter will be running at about 1 watt but if all goes well it will be slowly increased during the trial period.

Echo's uplink is 145.920 MHz using FM voice with 67 Hz PL tone (CTCSS) required. The downlink is on 435.300 Mhz, also FM voice. And like many terrestrial repeaters the downlink transmitter will only come on when it hears an uplink signal with a 67 Hz PL tone for about 1 second. After the uplink signals drop away the downlink transmitter stays on for 10 seconds. After that, the downlink signal goes away. You might say that the operation is just like a terrestrial FM repeater with a 1 second kerchunk filter and a 10 second hang time. The only difference is that this one is circleing the Earth in space.

Norm. (AMSAT)

**

RESCUE RADIO: UK FIRE EVACUATION BRINGS OUT HAM RADIO

RAYNET, the United Kingdoms version of RACES was recently called out during a very hazardous materials fire. Jeramy Boot, G4NJH, has the details:

--

On Monday the 5th of July at 19.55 BST Lancashire Emergency Planning called-out Rossendale Raynet to attend a Rest Centre in Colne. A fire at a building that contained an acetylene cylinder meant that local residents had to be evacuated.

About 40 people went to the Rest Centre but the majority were able to find accommodation for the night with friends or relatives. Social Services arranged accommodation for the remainder. Rossendale Raynet was stood down at 22.08 when the Rest Centre closed for the night.

Im G4NJH in Nottingham.

--

There were no injuries reported and the ham radio system worked flawlessly. (GB2RS)

**

ENFORCEMENT: FCC INVESTIGATING 1999 EXAM SESSIONS

The FCC has ordered thirty-seven hams to sit for retests. This, as part of an ongoing investigation of ham radio examination sessions held in Yucaipa, California, back in 1999.

The tests under government scrutiny were administered by a W5YI exam team. The exact test dates involved are those held on February 27th, March 27th, April 24th, May 22nd, June 26th, and July 31st of 1999.

This is one of the largest retest orders issued since the all volunteer testing program got underway in the early 1980's. (FCC)

**

ENFORCEMENT: HAM SURRENDERS LICENSE

A now former ham involved in a licensing investigation has turned in his ticket to the FCC. The Agency's Daryl Duckworth, NN0W, explains:

--

Frank C. Richards of Moers, New York, submitted his license KG2IJ for cancellation. In November of 1995 he had requested that the call sign KB4VU be changed to the next availlable and that the address be changed to Plattsburg, New York.

--

The FCC says that the call KB4VU actually belongs to one Frank C. Richards of Ft,. Meyers, Florida. It says that this Richards has never lived in New York and never requested that his callsign or address be changed.

After an investigation that lasted almost five months the New York Richards surrendered his ticket to the FCC on June 23rd. The FCC acknowledged receipt on July 6th noting that the Wireless Telecommunications Bureau has canceled that license and no further enforcement action is contemplated at this time. (FCC, RAIN)

**

ENFORCEMENT: $11,000 FINE AFFIRMED AGAINST CALIFORNIA HAM

The FCC has affirmed an $11,000 fine issued to a California ham. One whom the agency says caused deliberate interference to repeaters and then refused to accept several certified letters from the Commission.

The target of the now affirmed fine is Daniel Granda, KA6VHC, of Whittier California. As previously reported, back on March 31st the District Director of the Commission's Los Angeles Field Office issued a Notice of Apparent Liability for Forfeiture alleging that Granda deliberately interfered with two different repeaters. It said that when FCC notices were sent by Certified Mail, they were returned as unclaimed. But the FCC says that copies sent by regular first-class mail were not returned by the post office.

The fine is $7,000 for the alleged interference and $4,000 for not responding to FCC notices. Granda was given the usual 30 days to pay or to file an appeal. (FCC)

**

HAMVENTION: ARRL NATIONAL AND HAMVENTION COMBINE FOR 2005

Turning to the ham radio social scene, word that the ARRL has accepted an invitation from planners of Hamvention 2005 to bring the society's national convention back to Dayton.

According to General Chairman Gary Des Combes, N8EMO, ARRL Great Lakes Director Jim Weaver, K8JE, called shortly after the recent Board of Director's meeting. Weaver told Des Combes the League had accepted the invitation to hold the next ARRL National Convention at the 2005 Dayton Hamvention.

The combined show will take place next May 20th to the 22nd at its longtime home. That of coarse is the Hara Arena in suburban Dayton. (Hamvention©)

**

CONVENTIONS: K7UGA ON THE AIR FROM ARRL SW DIV CON

And the call sign of the late Barry M. Goldwater will soon be heard again. This, as special events station K7UGA takes to the air from the Southwestern Division Convention in Phoenix, Arizona from August 27th to the 29th.

This will not only be a chance for convention attendees to operate Goldwater's original Collins S-Line equipment but also to take part in an oral history project about Senator Goldwater that will begin recording at the show. Also, Goldwater impersonator Ben Tyler will attend the convention on Saturday afternoon to present his Goldwater "Autobiography".

Again. it all takes place August 27th to the 29th in Phoenix, Arizona. We will see you there. (SW Division Communicator)

**

ARNEWSLINE™ SUPPORT FUND REPORT WITH N6TCQ

Ladies and gentlemen, once again here is Amateur Radio Newsline's Support Fund Administrator, Andy Jarema, N6TCQ.

--

Continuing with our thank-you for June, we heard from Tim, N9TO and Carol Toman, WD9CNW of Westmont, IL; Ted Tsucalas, W0RMJ of Littleton, CO; Turning to CA, Leo Halog, KR6EG of San Francisco; Doug Cannon of Livermore; Monthly contributor William Walters, WA2IBM, of San Jose; monthly contributor Scott Hensley of the Area Communications Team, also in San Jose; Art Protas, KG6AY of West Covina; John Rice, KE6YFV of San Pedro and the Rio Hondo ARC of Whittier.

Thank you to everyone, and we promise to do our best to continue to earn your care and support.

A reminder that Newsline is a 501(c)(3) and California non-profit corporation. FCC regulations prohibit us from telling you exactly how to support us, but that information is on our website at www.arnewsline.org. That address will be repeated at the end of the newscast.

I'm Andy Jarema, N6TCQ.

--

Thank you Andy. (ARNewsline™ Support Fund)

**

CHANGING OF THE GUARD: JOHN KRAUS, W8JK - SK

Some sad news to report. Word that noted astronomer and antenna designer John Kraus, W8JK, has become a Silent Key. According to reports from the ARRL and CQ Magazine, Kraus died on July 18 at age 94.

John Krasus was a member of the inaugural "class" of the CQ Amateur Radio Hall of Fame, a world-renowned radio astronomer and the father of the "Big Ear" radio telescope at Ohio State University. In the world of Amateur Radio he was perhaps best known as an antenna designer. His designs include the famous W8JK bi-directional wire beam as well as the helix and corner reflector antennas often used at UHF frequencies. (ARRL, CQ)

**

KAHN STILL TRYING TO TEST CAM-D

Broadcast entrepreneur Leonard Kahn opposes the AM HD Radio IBOC system and has long promoted his Cam-D system as an alternative. In his latest filing with the FCC for the IBOC proceeding, Kahn reveals he tested his Cam-D system on Nebraska's 50 kilowatt KRVN at 880 kHz. However, he told Radio World Online that, some employees found the sound unacceptable and the tests were discontinued. For more on this story, see http://www.rwonline.com/dailynews/one.php?id=5511 (CGC)

**

HAM RADIO IN SPACE: NEW KENWOOD ISS RADIO PROVES OUT FINE

The Amateur Radio on the International Space Station USA team has successfully completed a comprehensive checkout pass of the new Kenwood D700 radio system with Astronaut Mike Finke, KE5AIT. Utilizing ground stations in Greenbelt, Maryland, Orlando, Florida and Houston, Texas and linking team members in Kansas, Colorado, Maryland, Florida and Texas, the ARISS USA team performed voice and packet radio uplink tests to fully validate the Kenwood D700 system for future school group operations.

During the East Coast pass, the ARISS team were able to perform signal strength measurements and voice quality checks on 2 meters and 70 centimeters using the Kenwood D700 radio and the ARISS-built W A One antenna system. Mike Finke provided the on-board feedback to the team to help them understand how the
radio sounds on-orbit. Finke said that the signals from the 70 centimeter uplink signals were especially loud. (ARISS)

**

WORLDBEAT - CANADA: RESTRUCTURING ON ITS WAY

Back on Earth, Canada appears ready to restructure its Amateur Radio service and work is well underway.

Following extensive discussions with Industry Canada, on July 23rd, Radio Amateurs of Canada formally submitted its Proposal on Morse Code and Related Matters to that regulatory agency. According to an Radio Amateurs of Canada press release, little changed from the draft proposal that was posted on the society's web site back in 2003.

Radio Amateurs of Canada says that it is now up to Industry Canada to respond to the proposal. The current version is on line in both English and French at www.rac.ca (RAC)

**

WORLDBEAT - MEXICO: ALL N.A. ADOPTS U.S. HDTV STANDARD

Mexico has formally adopted the U.S. ATSC Digital Television Standard based on 8 VSB technology. This, for terrestrial broadcasting in that nation.

Canada adopted the same standard in 1997. The decision by Mexico to go along with the U-S and Canada means that ATSC is now the North American Digital Television standard. ATSC was also adopted by South Korea in November of 1997 and Argentina in October of 1998. More is on the web at http://www.atsc.org/news_information/press/2004/PR_Mexico_7-7-4.pdf (CGC)

DX

In D-X, word that husband and wife team EA3BT and EA3WL will be active from the Gambia through the 4th of August. They plan to operate as C56BT and C56WL on 40 to 6 meters SSB. QSL as directed on the air.

And Steve Burrows, M5BXB, will be on from the Czech republic as OK8XB until the 6th of August. The OK8 prefix is quite rare, and Steve will be attempting to make at least 1,000 QSOs on the HF, 6 meters and on 2 meter's from a portable location on Lysa Hora. Thats site is 1,324 metres above sea level in grid square JN99FN.

**

THAT FINAL ITEM: THE PHYSICS OF M&M'S

And finally this week the story of how a researcher with a sweet tooth has changed science. Amateur Radio Newsline Henry Feinberg, K2SSQ, has the rest of the story:

--

Princeton physicist Paul Chaikin's passion for M&M candies was so well known that his students played a sweet practical joke on him. The left a 55 gallon drum of the candies in his office. Little did they know that their prank would lead to a physics breakthrough.

The journal Science says that the barrel full of the oblate little candies made Chaikin think about how well they packed in. A series of studies have shown they pack more tightly than perfect spheres. This is something that surprises many physicists and Chaikin himself. So Chaikin and his colleague, chemist Salvatore Torquato, used the candies to investigate the physical and mathematical principles involved when particles are poured randomly into a vessel.

The report in Science says they found that oblate spheroids like plain M&Ms pack surprisingly more densely than regular spheres when poured randomly and shaken. That spheres occupy about 64 percent of the space in a container. M&Ms manage to pack in at a density of about 68 percent.

But one of the researchers had a more philosophical view of the experiment. Salvatore Torquato said that to him it is remarkable that you an take this simple system with common candies and probe one of the deepest problems in condensed matter physics.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, not to far from Princeton, New Jersey.

--

According to news reports, Mars Inc., which makes M&Ms, did not help sponsor the research although it donated 125 pounds of M&Ms to the two scientists. (Journal of Science, Science Online)

I'm thinking about putting a mag mount antenna on my car. But I have heard that they really don't work. Someone said that because of the magnet their isn't any capacitive coupling for the RF ground. Is that true? So a mag mount would work just as well if I set it on my picnic table? Also, does the coax attached to it as a ground? If I change the length of the coax, will a mag mount quit working?

Thanks.

If such were the case (that they really don't work) there are a lot of
us who would not be communicating. :-)

Hi Bob,

Many claims are made for mag-mounts that just don't stand the test of common sense. The capacitive coupling is one of them. Too often this claim is taken on faith.

This is not to say all models are faith based however.

Testing will undoubtedly reveal that the mag-mount will match to the transmitter, but again, this says nothing of the performance of communication.

The faith based arguments have the mount base being the plate of the capacitor meeting the plate of the chassis. I have yet to hear this analysis being examined by peeling away all the extraneous layers to reveal this plate.

The faith based arguers throw up their hands and insist "it must be there! otherwise the antenna wouldn't work!"

Such arguments are then dashed against the rocks when past mag mount users offer reports that when they replaced them with true metallic connected antennas, those antennas outperform the mag mounts.

Aside from the conflicting evidence of probable poorer efficiency, the necessary capacitive coupling from this presumed plate then requires that it have leads, which must in turn lead back through the path of chassis metal to reach up the cable to the opposite plate. Faith based arguments quickly collapse when pressed to this consideration.

Another failure of the faith based argument of the plate in the mount is found through its redundancy to already existing capacitance in the cable leading up to the mag mount. A six foot coaxial cable feeding the mag mount, when tightly, mechanically coupled to the chassis through simple routing paths to the mount, also are tightly,

capacitively coupled and would exhibit just as much, if not more capacitance than could be attributed to the plate presumed to be in the mount.

Setting the mag mount on a picnic table would seem to be an exercise in failure. The common away-from-car advise is to mount it atop a cookie sheet. Testing is advised in other words, and this includes testing against a true, metallic connected antenna. However, if you had that opportunity, you would do well to simply mount the metallic connected antenna and enjoy talking on the radio. To answer your other question about changing the length and performance going to hell. This characteristic in itself suggests you be on top of the required lengths and combination of such influences, or toss that air cooled resistor.

The effect of the hat will depend upon the structure, and particularly which
type you use - symmetrical or non-symmetrical.

Check out these links...
http://www.cebik.com/hatp.html
http://www.cebik.com/linvert2.html

> Would an swr of 1.2 :1 be too
> high to get stable results when a hat is added?

You seem to worry too much about SWR, 1.2:1 is very acceptable.
But, if you add a capacity hat, you will need to shorten the
original part of the antenna to compensate.

>
> Does anybody know of this mod using a LC7132 chip piggyback and have a
> circuit diagram so i can check it is in correct?

I know of that mod, the 7132 reads the display lines.
As the original chip (7137) uses BCD coding, the display lines feed 12
straight to the program lines of that 7132. With a 5 or 6 volt supply to the
chip, having 12 volts on the program lines may not be good for it.
The LC7131 is a far better chip to use, it uses the same BCD coding as the
7137.

That being said, the low power will be due to something else. The problem
may be a faulty component in the output or drive, but it could also be down
to someone f*ck*ng with something they don't understand. Far too many
people climb inside a CB without any real technical knowledge and so make
all kinds of serious mistakes.

Poor repairs and mods can cause all kinds of problems, you could find it
putting signals out on other bands - interfering with other radio services.
If you are unsure of what kind of cock-up may have been achieved, then it
really needs someone who understands electronics and has the correct test
equipment.

> Failing that does anybody have a service manual or circuit diagram of the
> Midland 77-805 radio?

I don't have a diagram for that Midland, have you done a Google search?

Yep, most of them work fine.
I took one apart once at the mag-mount
The one I took apart had a thin plate between the magnet and the car which
was soldered to the braid.
The capacitive coupling worked fine for 2meters and 10 meters.
I haven't tried a mag-mount for lower freqs - so I can't address those.

Most people agree that they work but are usually at odds over
how well they work. One can only give a personal account of their
use.

During the last sunspot cycle, I ran a Radio Shack HTX-100 on 10
Meters. I used a mag-mount, also from Radio Shack, that was only
3 Ft high and was base loaded. It had about 10 ft of RG-58 on it
and was very easy to adjust. The antenna was stuck to the "air foil"
on the back of the trunk lid on a 1989 Firebird.

While driving the roads of Phoenix Arizona, I was always able to
hit the mid-west and occasionally the east coast. All of the
contacts were solid copy and I did it on the 5 watts and 35 watts.

So I would say that they work.

> I'm thinking about putting a mag mount antenna on my car. But I
> have heard that they really don't work.

They do work. But that all depends on ones definition of "works". The antennas do radiate RF. The really short stubby ones tend to be rather narrow banded meaning the
SWR is near 1 to 1 at the center at channel 19 or 20. Towards channel 1 or 40 the SWR gets progressively worse and can rise to 2 to 1 or 3 to 1. The exact value depends on the model of antenna you buy and how it is installed. If you're lucky the antenna may come with a chart showing the SWR verses frequency. I've seen these on the ones at Radio Shack for example. Basically as long as the SWR remains below 2 to 1 the radio shouldn't have a problem.

The other factor is really short, like the base loaded mag mount, antennas are not very efficient. A lot of your transmitter power is wasted in the loading coil. In your case if all you want is short range communications, a few miles, then this may not even affect you much.

> Someone said that because of
> the magnet their isn't any capacitive coupling for the RF ground. Is
> that true?

There is capacitive coupling for the RF ground, so don't worry about it.

> So a mag mount would work just as well if I set it on my
> picnic table?

It might IF the table is metal, and depending on size too. Wood ones don't, so don't waste your time trying it.

> Also, does the coax attached to it as a ground?

In a perfect world the answer is the coax braid "should" be at ground potenial for RF. The coax itself is not a ground connection. To explaine this would take several paragraphs to get in to the details.

> If I change the length of the coax, will a mag mount quit working?

No. But your SWR meter may show changes, and if the radio has a built-in SWR monitoring circuit it could cause the radio to fold back power output or shut down. What is happening if you see this is the coax has RF current on it on the outside surface and ends up acting like part of the radating section of the antenna.

Sure they work, but don't expect performance to be on par with the
same antenna on a permanent mount. And it probably won't work very
well from the picnic table for various reasons. But if you do use a
mag-mount, use the same length of coax that came with the mount, or
whatever length is recommended by the manufacturer.

As for those who think a mag-mount works because of capacitive
coupling to the mounting surface, I would suggest you actually try to
measure this capacitance -- you will find that it's not nearly enough
to make an effective counterpoise connection unless your frequencies
are considerably higher than 27 MHz.

Bob,
Unless you are using a 1/4 wave VHF antenna, make sure it has a strong
magnet, or magnets. I had a 5/8 wave 2m antenna on a name brand mag mount
blow off the roof.

2069. Power supply for CB radios...

Newsgroup: rec.radio.cb
Date: 2004-08-01 04:08:13 UTC
From: Mark <NoSpam@all.thanks>
Message-ID: <1091333344.969222@radsrv1.tranzpeer.net>
Source record: 184877

Hi...

Just pulled two radios out of storage after 11 years on the road.

One is a Uniden Grant, HF, (27 MHz) the other is a Uniden UH-12 (I think), 40 channel UHF.

I want to get them going again. What do I need with respect to power supply? I've seen some units in Dick Smith. And I've seen things like Arlec battery charger units, that will deliver 2.5 Amps at 12V.

I suspect I'll get tons of power supply hum if I go with the cheapy battery charger solution?

This would explain the price difference too on the Dick Smith model?

Any thoughts?

Mark.

Message-ID: <1091333366.349644@radsrv1.tranzpeer.net>
Source record: 184878

Forgot to ask: I see power supplies that are rated at 13.8V, 5 amps. Would this be correct to run both the UHF and the HF CB at the same time? I would only transmit on one at any time.

How many amps does an HF set draw when transmitting? If its 12 Watts output, does this equate to 1 amp?

Thanks again,
Mark.

I use a large battery, and a small charger. I run six radios, all at once
sometimes.
50W VHF and UHF transmitters, and an Icom FT-847. No problems at all.
I've been running this way for many years. You'll do better with a
switching supply charger, but unless there's something seriously wrong with
your system, you won't have hum problems.

Take the charger to the battery (both leads!) and then take leads from the
battery, out to the equipment.

> How many amps does an HF set draw when transmitting? If its 12 Watts

Roughly double. They are never much more than 50% efficient.

Why? You want to know when I won't be home so you can slip over here and stick another note under my door like a chicken. Oh by the way is that construction on 18 done, and is the hillbilly that owns the ramshackle lawn mower business east of I-71 sign still up? I keep waiting for his sign to fall over in to the mud pit next to it. The flag in the window is tacky.

Not really. Consider a magnetic base of 2 inches in diameter sitting on a
painted metal
surface with 0.010 inches of paint. Then as an approximation I looked up
the dielectric constant for epoxy, 3.62, to use for the paint.

Cpf = 0.225 * Er * A / T

Where Cpf is the capacitance in pf
Er is the dielectric constant
A is area of one plate of the capacitor
T is the distance between the two plates

All dimension in inches.

The above example works out to C = 255.88pf

The reactance of 256pf at 27MHz is 23.03 ohms. If the paint dielectric is
higher, paint thinner, or the antenna base larger in diameter, then the
reactance would be even lower. Remember this is reactive, not resistance. By
adjusting the antenna a bit you can compensate for this.

>adjusting the antenna a bit you can compensate for this.

Reality has a way of introducing unforseen factors into the equation,
such as the increased distance and air gaps between the plates caused
by the non-scratch surface of the base (which sets the dielectric
constant closer to 1), the paint/primer/wax resistive and dielectric
properties at RF frequencies (which, for many substances, is radically
different than when measured at the frequencies used to determine the
referenced constants), the ESR due to poor RF conductivity of steel (a
ferromagnetic material) when saturated by a magnetic field at the
point of contact, etc, etc. And don't forget that this capacitive
reactance and ESR must be added to the ground impedance of the vehicle
at the point of contact, which, as we all know, isn't exactly ideal.

Regardless, my suggestion was to measure it, not calculate it. It's easy to measure yourself -- just find yourself an old mag-mount antenna, remove the whip and loading coil, lop off all but a couple inches of the coax, strip the coax shield, plonk it right next to a permanent mount and measure the impedance between the shield and ground with an impedance bridge. It's big. Typically it will measure several hundred ohms, which is a pretty crappy ground. If you can, remove the magnet from the mount, measure again and note the difference.

Cool links. Lots of info. Thank you.

> > Would an swr of 1.2 :1 be too
> > high to get stable results when a hat is added?
>
> You seem to worry too much about SWR, 1.2:1 is very acceptable.

Me worry about swr? Nah. I didn't even mention it until Jay did. Before
that, I thought anything less than 1.5:1 would sufice. So when he started
talking about swr not being able to go below 1.2:1 on a 1/4 whip, I started
thinking that for a capacity hat to work, it needed to be a flat 1:1. To get
my experiment working, I would have settled for a 2:1 :-)

> But, if you add a capacity hat, you will need to shorten the
> original part of the antenna to compensate.

So if I didn't shorten it, could I get a capacity hat to make the 1/4 wave
look like a 1/2 wave electricly? Would it improve performance or is a
capacity hat strictly for reducing overall dimentions while loosing as
little performance as possible?

If it's for reducing size, wouldn't it be the same if I reduced the size of a 1/2 wave down to a 1/4 wave's size using the hat to keep performance up about what a 1/4 wave can do?

Hello Mark:

Know what you mean about the radios and such. I fooled around with batteries, Battery Chargers, wires running from the Batteries thru the window ect. Battery Acid eating the Carpet, Carpet padding, and then the wood floor.

I bought a Astron 25 Amp Power Supply, Model SS-25, and it powers everything, my HF Rigs, VHF Rigs, and UHF Rigs, and a few low power linear amplifiers. I have a 70 Amp Asrton Power Supply for a larger Liner Amplifier. Both these power supplies work great! And it looks great!

I have a few radios in the garage, and got another SS-25 for those radios. As special double secret frequencies are monitored, two scanners are running, and a variety of radios and of course the Boom Box Playing Rock n Roll music, in the 105 degree heat, the supply works flawlessly.

The SS-25 supply is a switching type power supply. Switching type power supplies use to have a bad name as far as noise was concerned, but this model SS-25 is very quiet and clean.

Heres the web site:

http://www.astroncorp.com/sps.shtml

I found out years ago it was cheaper and easier to have the good stuff.

This alone tells me you didn't have the float voltage set right.
A properly set charger does not cause bubling or gassing, or any acid spill.
Gel cells or AGM batteries are immune to this anyway.
You don't need to buy an expensive supply, and you get backup power as a
bonus.

> I bought a Astron 25 Amp Power Supply, Model SS-25, and it powers
> everything, my HF Rigs, VHF Rigs, and UHF Rigs, and a few low power

> Liner Amplifier. Both these power supplies work great! And it looks great!

I've never really worried about how my power supply looks, as long as it
keeps me on the air.

My father just bought a solid-state linear, 2kW max output, that operates
from a 48V battery set.
So, the power supply required to run it, is dramatically smaller than
normal. It won't stand up to continuous transmit for more than a couple of
hours, but that is hardly a problem. Whenever he's receiving, the battery
will be charging. At 48V, the current is relatively easy to manage.

> The SS-25 supply is a switching type power supply. Switching type power
> supplies use to have a bad name as far as noise was concerned, but this
> model SS-25 is very quiet and clean.

Agreed, it is somewhat easier to do a bad switcher design than a bad linear
design, but those that think linears can't be noisy are in a fantasy world.
Done right, a switcher won't put out any noise that will really cause you a
problem.

Will work just fine! Put it on your car where the is some metal. The
magnet has no, none, zero, impact on the E fielf but the nearby metal does.

Mag mounts are FB.

I have heard of car batteries in the house but I think it's a bad idea.
Lead acid batteries vent Hydrogen gas, this is explosive. The acid can spill
and cause more problems and it can burn you. As I said, I have heard of
people doing this. Hope they don't smoke. Although it does make a good
emergency supply, if needed. Pick up an Astron supply. They are dependable and
work well. I have one Astron 35 amp supply with meters and two 20 amp astrons,
one which is variable voltage up to 15 volts DC. Never had any problems with
them. These can be picked up used from around $40-$110 used.
Question for you, I'm not being a policeman here but do you have a ham ticket to
use the UHF and HF ham bands??

To the guy below.....
Yaesu make the FT-847, not Icom.
50W VHF and UHF transmitters, and an Icom FT-847.
==========

Hello Steve:

I fell out of my chair laughing at that one. That is first call Redneck
all the way.

But I must admit I have a bunch of coaxes entering my radio room from a
sliding glass window.

But the all time great was when my ol man (Dear ol Dad) knocked a hole
in the wall with a slege hammer and length of 1 1/2 Pipe. We needed to
get the coaxes in the radio room for the Moonraker 4, and Omni Antennas.
We had rented a house for a short while while getting another house
ready to move into.

The coaxes fit in the hole just fine. A few rags to keep the cool air
and bugs out, and started to hammer the San Fernando Valley from high a
top the heigths of Tujunga.

Oh the memeories.....

Jay in the Mojave

> -Dr.X

I guess I should have specified it's the "Radio Shack" trc-485. Aperantly there is a Dragon trc-485 that may have some slight differences. Slight, but enough to have me wondering about the CPU. It appears that some of the RS trc-485's had a different chip in it. Other radios based on this chassis also had other different cpu's that are similar.

The problem I'm having is that the only channel mod I found concerning this radio doesn't have the SY 201 (and mine does). They say to cut traces to the cpu at pin 31, 32, and 33, then jump 34. Can anyone tell me what corner pin 1 is at? Also, the cpu board layout is different from the diags I've seen.

I've been out of radio for years but even 15 years ago I saw cpu control coming. I guess I should have followed along. :-\

TIA,
-Dr.X

PS: This page http://www.radiomods.co.nz/trc485mod.html says the SY201 is in the Dragon and the Radioshack should have the HYU4011Q06 FP. It seems backward over here.

PPS: to 240-Robert. Did you ever get an answer about the FM?

I did just for grins and giggles Frank. On my old 1/4 wave 6m mag mount, I used on my old Dodge minivan, I measured 490pf. The base was 4.75 inches in diameter. The base was placed on a steel sheet using 3 sheets of notebook paper. Notebook paper is around 0.003 inches thick, so that gives me the 0.010 inch spacing. Plus this mount also used a thin sheet of rubber over the foil making the spacing a bit higher, thus you would expect the capacitance to be down a bit from the calculated value. So the value I measured is about what I expected. It is important that the foil be intact on the bottom. If missing then the measured value will be much lower.

I suspect that you measured capacitance directly with either a
capacitance bridge or a DMM. Those won't work because they don't use
RF frequencies. I suggested the use of an impedance bridge and
explained the reasons why the frequency was important. As I said
before, if you measure it as I described, the results will be
significantly lower than your measured 490 pF.

Just for the sake of discussion, how does the dielectric constant of
notebook paper compare to that of epoxy paint?

I have heard of car batteries in the house but I think it's a bad idea.
Lead acid batteries vent Hydrogen gas, this is explosive. The acid can
spill
and cause more problems and it can burn you. As I said, I have heard of
people doing this. Hope they don't smoke.

I never said CAR batteries. They are badly suited for this service anyway.
Car batteries are optimized for short pulse discharges, and high tolerance
for overcharge, heat, and vibration.

Gel cells or AGM batteires, properly maintained, are perfectly safe, and
they don't leak acid even mounted upside down.

Although it does make a good emergency supply, if needed. Pick up an
Astron supply. They are dependable and work well. I have one Astron 35 amp
supply with meters and two 20 amp astrons, one which is variable voltage up
to 15 volts DC. Never had any problems with them. These can be picked up
used from around $40-$110 used.
Question for you, I'm not being a policeman here but do you have a ham
ticket to use the UHF and HF ham bands??

KC6ETE, Extra class. Works for me.

I did.

> RF frequencies.

They work just fine. I use them all the time, on the job and else where.

> I suggested the use of an impedance bridge and
> explained the reasons why the frequency was important.

For checking capacitance in general the answer is no, unless the dielectric shows extreme variations verses frequency and has a high loss tangent. For many materials this variation is rather small, and car paint doesn't dielectric heat much, so the loss tangent is low. About the ESR, equivalent series resistance, which is composed of mainly skin effect on the plates and losses in the dielectric, this appears in series with the capacitance and simply adds to the resistive feed point impedance of the antenna. The feed point impedance of a typical 1/4 wave ground plane with the radials at 90 degrees to the vertical element is around 30 to 40 ohms, so a bit of extra resistance makes the match look better at the expense of a lower over all antenna efficiency. Capacitive coupling to the body of the car is required, if there is no direct connection, to mirror the 1/4 wave element, thus producing the required 1/2 wave element needed for a resonate antenna.

Losses in the car body material are a completely separate issue and has nothing to do with how the coax gets coupled to the car body.

Now if you wanted to measure inductance I would say yes because you have capacitance between turns that effectively reduces the inductance and since the capacitance electricaly apperas in series with it. The same applies to measuring coil Q, and that is because of skin effect and proximity effect.

> As I said
> before, if you measure it as I described, the results will be
> significantly lower than your measured 490 pF.

Measurements are fine, but you also have to know when your equipment is lying. Poor application of test equipment, failure to understand the limitations of the equipment etc can lead one down the preverbal garden path with no warning. I get a kick out of new hires when they ask me why the waveforms they see don't look right on the scope, meter measurements don't look right etc. Then I get to show them all the wonderful ways test gear can screw up and never give you a hint what they're measuring is garbage but yet there is nothing wrong with the instruments they are using. One of my favorites is flipping the leads on a digital meter and watch the reading change 20 percent or more. Most digital meters don't use true differential inputs so the ground side of the meter is at potential and also allows noise in to the meter electronics. The ones that do have much less of a problem like the above. I could go on about what happens to scopes connected to high frequency signals with funny waveforms, high-pots that are not properly ground referenced, hall-effect current sensors etc.

They way to guard against this is to use your head. If the measurement says one thing and a quick calculation, particular if its a simple one, says you should have something significantly different you really need to consider you have a measurement problem of some kind. Nobody would have bothered to produce all the wonderful formulas, equations, and stuff your head with theory if it didn't work. I've seen to many people get hung up wasting time over a bad measurement, and didn't trust their calculations enough to question what they were seeing. It won't be the first time I went to help somebody and ended up taking the scope probe and throwing it in the trash. The look on their face when what they calculated matches the scope with a new functioning probe is priceless.

Hi Leland,

They may work fine, but having an answer does not make it accurate.
You clearly state this on your own further down the page in your
response (I shan't duplicate it).

>> I suggested the use of an impedance bridge and
>> explained the reasons why the frequency was important.
>
>For checking capacitance in general the answer is no, unless the dielectric
>shows extreme variations verses frequency and has a high loss tangent.

However, this is one component you have not measured, and admittedly
so. It also begs discussing other sources of failure that go
undetected. Extrapolation from 1Khz to 27Mhz is tenuous if not
fraught with large scale error.

> About the ESR, equivalent
>series resistance, which is composed of mainly skin effect on the plates and
>losses in the dielectric, this appears in series with the capacitance and
>simply adds to the resistive feed point impedance of the antenna.

This talks to the difference between having a good match, and having a
good radiator. The two have nothing to do with one or the other. If
you can confine a "bad match" to the points between the ends of a
radiator, the state of mismatch is immaterial (and in fact, most
common implementations of antennas - monopoles, dipoles - do support a
mismatch with a standing wave along their entire length notably
described as the current/voltage distribution). All such antennas
find it quite within their ability to ring with standing waves and be
highly efficient.

>The feed
>point impedance of a typical 1/4 wave ground plane with the radials at 90
>degrees to the vertical element is around 30 to 40 ohms, so a bit of extra
>resistance makes the match look better at the expense of a lower over all
>antenna efficiency.

The "bit" of extra resistance so sought (and presumably to the market advantage) comes to upwards of 20 Ohms by your estimation above. With this logic you could just as well glue the antenna to cardboard, add a resistor and make the same claims. The lower efficiency so casually dismissed runs to 4dB; however, that is at the extreme of your range.

This gracious discarding of power only speaks of the scenario where the "capacitor" of the mount has short leads - but it doesn't. Most mag-mounts have several many feet of cable leading back to the source, which then matches that length through the chassis to return to the opposite side of the "plate" supported by the sheet metal beneath the mount.

If simple math employing mount radius, paint thickness and the like sufficed to explain how mag-mounts "need" their capacitance to appear beneath them; then the same analysis can be applied to the cable that leads to the same mag-mount's plate. I would offer that a simple six foot length of that cable, ordinary rg-58 (shield O.D. at 0.195" with overall O.D. at 0.210"), offers on the order of 40 odd square inches of surface area. Being a cylinder, not all of that surface is in close contact with the chassis as it is routed along to the mag-mount. As such, I will assign it a plate separation distance of half the overall cable O.D. or 0.105". Plugging and chugging through the standard formulas results in several hundred pF.

>Capacitive coupling to the body of the car is required,

So, by the faith of needed capacitance at the mount ("how else would it work?"), we find there is as much (and likely more) capacitance found in the cable leading to it. If the mount's was more than necessary, it would seem the cable obviated it well in advance. Hence, the "need" of this capacitor is practically nil as it already comes free with the transmission line - and let's face it, a six foot line is fairly short.

Really, when valid measurements are replaced with faith-based logic, this argument that there is some virtue in a lossy capacitor is strictly for advertising copy and if it blew away in the wind, no one would miss it (and possibly they would get out further).

Ever wonder why so many different types of capacitors exist? I mean,
if the dielectric properties of so many materials had such little
variation with frequency, why the need for so many different types?
Why are mica, air and vacuum caps sometimes preferred for RF over
ceramic? Why not just use electrolytics? Of course you know the
answer, and that's why if you are going to measure a capacitor you
MUST measure it at the operating frequency. And, if possible, under
load.

ESR is not just skin effect and dielectric losses. But skin effect
-is- a major factor where ferromagnetic conductors are concerned; and
dielectric losses in many materials mount up quickly with frequency.

Regardless, you didn't measure the impedance at operating frequency so
you don't know the ESR.

> Capacitive coupling to the body of the car is required,

That's just flat-out wrong. Except for the inevitable capacitive field
between the radiator and the ground, capacitive coupling is not a
prerequisite for the antenna to operate. This is clearly proven by NGP
antennas, which use a specific length of coax as the counterpoise. In
case you never noticed, most CB mag-mount antennas come with the very
same length of coax already attached, which should give you a clue as
to how mag-mounts are grounded.

>if there is no direct connection, to mirror the 1/4 wave element, thus

Losses in the vehicle body have a great deal to do with any capacitive
coupling to the body. If the losses in the steel are high (due to
whatever factors involved), the result will be excessive ESR in the
coupling, and the ground impedance presented to the coax is also going
to be high. And unless you have some other way of setting the antenna
end of the coax shield at RF ground you are going to get RF on the
shield.

As with ESR, there are many factors that will affect the Q of a coil,
not the least of which is the permeability and magnetic losses of any
material in and around the coil. But what coil? I thought this was
about the capacitive coupling of a mag-mount antenna base?

I agree 100%. And for that same reason you should know that you can't
measure impedance at 27 MHz using a capacitance tester that works on
audio freqs. Not to sound demeaning, but you should have learned that
much in freshman physics.

>new functioning probe is priceless.

One issue you fail to consider is the possibility of error because
your measurement 'seems' correct; i.e, it's what you expect to see.
Happens all the time with inexperienced techs.

>As such, I will assign it a plate separation distance of half the
>overall cable O.D. or 0.105". Plugging and chugging through the
>standard formulas results in several hundred pF.

Now THERE'S something I haven't tried, so I went out and tried it. I
ended up doing four tests:

1. I cut six feet of RG-58/U and layed it loose in the bed of my S-10.
At 27 MHz it measured 100 pF, and 130 pF when held flat and straight
by putting a 2x4 on top it. Impedance was about 70 ohms and 55 ohms,
respectively.

2. I unplugged both ends of my installed coax (~12' of RG-8/U) and
tested. Measured from the antenna end, capacitance was 390 pF and
impedance a little under 20 ohms.

3. I plugged the RG-8 back into the radio (radio is mounted directly
to the truck chassis on the hump). Again measured from the antenna
end, capacitance dropped to about 310 pF and impedance rose to about
25 ohms.

4. With the coax still plugged into the radio, the GDO was brought up
to the resonance of the coax, which dipped at around 45 MHz (GDO dial
isn't too accurate). Capacitance was unmeasurable and impedance
dropped to about 3 ohms (estimated).

And for the sake of mentioning it, I tested the ground impedance of
mag-mount bases many years ago when I still thought mag-mounts were a
neat idea. The typical measured impedance was several hundred ohms.

Now anyone can draw their own conclusions from these tests, but IMO
they serve to reinforce my previous conclusion that mag-mount antennas
work by using the coax as the ground, -not- any capacitive coupling at
the base. The capacitance at the base may contribute to the ground
when the coax isn't resonant, but only minimally.

Thanks for the idea, Richard.

Hal, the USCG authorizes the USCG Auxiliary to use land-mobile radios on VHF-Marine band. This is commonly accomplished with amateur radio antennas cut for 2 mtr, and even without modification they do a fair job for 5-10 miles using the standard mag-mount design. The radio is typically a standard VHF-Marine unit with 25w output. With the antenna trimmed for the lower end of the Marine band they of course perform a litttle better. I had one occassion to try an alternative to the standard car roof mount last summer. I was stationed on the Chesapeake Bay Bridge Tunnel for an activity taking place, and had a standard Shakespeare coil-loaded 5' marine antenna on the roof of the SUV. It's performance was "poor". When I grounded the antenna to a piece of bridge railing (the bridge at that point between islands was about 4 miles long) the rx & tx improved notably. This extended the range that I was copied loud and clear from 5 miles to over 15 miles. Overall, a typical mag-mount antenna would probably have equaled if not outperformed it. Then again the marine antennas were not designed for car-roof mounting.

No one said anything about measurement methods. We were talking about
how an amp is rated for power. A "blue faced palomar" is rated to
deliver how many watts? Are those watts peak watts or dead key watts?

I know you probably don't understand the nuances of marketing 101, but
if you can take a 25 watt dead key amp and now claim it's a 100 watt
(peak) amp, it "sounds" bigger, even if it really isn't.

>> An amp rated for 100 watts PEAK, can do no
>>more than 25 watts of carrier power, if you

>Modulation was not part of the original discussion...Frank tosses it out
>to obfuscate his incorrect points.

Modulation IS an integral part of any amplifier discussion. If you
want to be able to make 100% of modulation, you have to be able to

produce 4 times carrier power. If your amp isn't up to the job, it
will sound like crap.

>>With an AM radio that does 4 watts

The chap seems to have spent some time experimenting and getting
some actual figures.
That's what Amateur radio is supposed to be about, but I see no
reason why CBers should not experiment in that way.

Here in the UK, we are limited to 1/2 wave dipole or 5/8 wave
monopole, 55mm maximum width, and no directional antennas are
allowed. But, within those rules, there is no law against making
your own and experimenting.

> So if I didn't shorten it, could I get a capacity hat to make the 1/4 wave
> look like a 1/2 wave electricly? Would it improve performance or is a

> If it's for reducing size, wouldn't it be the same if I reduced the
> size of a 1/2 wave down to a 1/4 wave's size using the hat to keep
> performance up about what a 1/4 wave can do?

The real purpose of a symmetrical capacity hat is loading. On one of
those pages, a chart gives length and gain figures.
More radials = shorter radials and slightly more gain.

The nearest thing I can find to a comparison, is where he gives the gain of
a monopole as 3dB over a dipole - and the hatted antenna chart gives 4.96dBi
to 5dBi, depending on number of radials.
If you have the time and equipment, the best way to be sure is to try it and
see what results you get.

As for the SWR, I would say that 1.5 is fine. If you are putting a hat on,
forget the SWR before fitting it as the hat will add electrical length to
the antenna - making the previous reading meaningless.
Save the SWR reading and tuning until the hat is on.

Regards,

Peter.

The car is an '89 Mazda RX7. When sitting still, the receive is quiet enough. When moving, I get a static about an s3- s5 that sounds like a bad connection. My antenna is a 4ft glass mount by antenna specialists. I checked the antenna and connections and all looks OK. I'm suspecting something loose because when I push in the clutch, it mostly quits. Then it just comes and goes every few seconds. Revving the engine doesn't cause the problem either. Since it's not there when sitting still, it has become difficult to diagnose. A few other things to note - this is a new problem that wasn't there the last time this antenna was on this car. There is very little voltage drop from engine to battery or chassis sitting still. The exhaust has very high resistance to ground at the tailpipes - about 50K ohms. Could it be the exhaust? Any other ideas? By the way, this antenna performs almost as well as anything else according to signal reports, a field strength meter, and others that have used one. The Midland glass mount gave a field strength meter reading of only half what this one does.

Chris

<20040719010136.05916.00001968@mb-m05.aol.com>: *Hi *Here is what I just
got, Cobra 29 LTD Classic that was bumped up a bit, a new Palomar Elite
300 amp (ebay) , Diesel (?) noise canceling mic and a Wilsom 5000 mag
mount ant.
I cant get the SWR down below 2.5. I ran a new 18' cable and a ground
wire to the frame of the truck but ever time i key up the ANT light
lights up on the radio.
My questions are:
1. How can I get the SWR down?
-
>Just three words: Grounding, grounding, and

>grounding. You need to ground the radio AND

>the amp AND the antenna.

The antenna is already grounded. A Wilson mag mount needs no additional
ground.

>A magnet isn't a any type of electrical

>connection at all.

Try again,,s-l-o-w-e-r. A Wilson mag mount needs no additional ground.
That you erroneously feel that "electrical connection" and "ground" are
interchangeable and synonymous
doesn't make the two terms mutually exclusive.

> Some have been duped into thinking there's

>a capacitive coupling between the magnet and
>body through the paint, but fail to realize that

>the magnet itself prevents any capacitive

>coupling. That's why most mag-mounts come

>with 18' of coax yet frequently show high

>SWR.

Wrong. The length of coax has absolutely nothing to do with capacitive coupling in a mobile application. In addition, "most" Wilson mag mounts do NOT show high SWR. You not being familiar with something should clue you in that you're not qualified to judge it. You have given poor advice and incorrect advice concerning this item.

> And unless the antenna is a dummy load,

>you can move the cable around and watch the
>SWR needle wander.

Again,,wrong. And if you can "move the cable around and watch the swr needle wander" on YOUR mobile application when using a mag mount or anything else, you need a consult a technician who doesn't claim a relation between coax length and "capacitive coupling" when applied to a correctly installed Wilson mag mount.

>Fact: Mag-mount antennas have piss-poor

>ground connections.

Fact: In all but the most notable exceptional applications, the grounding of a mobile mag mount, specifically a Wilson, is more than adequate for its intended use.

>By "grounding" I

>mean an "RF ground".

You can make it "mean" anything you wish and your little black heart desires but the fact that the antenna doesn't meet with your personal approval doesn't change the hard facts that only you have a problem with accepting the tried and true test data that has been widely accepted across the radio spectrum world by real engineers, designers, and users worldwide.

>At 27MHz, this means

>mounting the radio and amp directly to the

>chassis and/or using grounding straps that are
>no more than a few inches long. Only after

>your system is properly grounded can you

>address any other issues.

Nonsense. One can mount the radio in a slide mount and to make it temporary or it can be mounted in a permanent manner.

>Nobody said it couldn't.

You said the radio must have a ground strap running to the chassis in order to be properly "grounded",,this is untrue.

>A slide mount is fine if

>the receiver half is mounted to the chassis (or

>with a very short grounding strap).

Sure, that's another way of many, but proper grounding doesn't always necessitate the radio be attached to the chassis.
It can be mounted
to the dash and a myriad of other places.

>Strip the plastic and vinyl from the dash, and

>behold... the chassis!

>The chassis also exists in a "myriad of other

>places".

And the chassis is not the be-all end-all answer to ground as you mistakenly profess. In fact, the lack of a ground strap to chassis in the described
application probably has nothing at all to do with the SWR he is seeing, but with you not being familiar or educated on Wilson antennas and their characteristics and properties and performance, such balderdash is to be expected from voodoo wannabe techs like yourself. Bottom line,,the radio does not need
directly mounted to the chassis in order to
provide adequate grounding. In fact, this is less
practical and not the manner of which the majority of cb installs are complete.

>It's very practical.

Try it again,,,,s-l-o-w-l-y. I said it was "less" practical.

>It just takes a little extra effort.

So does educating you on matters you know nothing of, but you appear to get frustrated and angry when someone tries to clue you in on matters you know nothing of, but your low self-esteem and briused ego kicks in and takes over and you become hostile and adamant and insst on keeping your mind closed. It's almost as if you piss yourself off when you don't know something and you can't stand to be informed by anybody. In fact, in the past when you have been wrong and corrected, you hurled insults and called names and attacked those who have corrected you in the past, calling them voodoo technicians. As always, you attack the person because you have nothing to attack the topic with.

_
Yes, that is but ONE manner of grounding your radio, but not the only manner in which to achieve proper ground..

>And those other issues can be many.

Almost as many as there are ways in which to mount the radio other than mounted directly to
the chassis.

>For example, your 'bumped' Cobra may have

>been 'bumped' by a moron; your Palomar may
>have a detuned input or output, a bad power

>transistor, or even worse it might be

>self-oscillating; you might be using cheap coax

Well, if one is using a coax like you are familiar with (one that makes the SWR move when you touch the coax) then yes, I'm certain you are using cheap coax, among other problems.

>(never use foam!); you might have a bad

>antenna; etc. But regardless of the problem,

>it's always easier to troubleshoot if the system

>is properly grounded.

*2. Is this a good combo?

>Not really.

Sure it is. Palomar amps work quite well.

>When fed with the correct input levels.

Backpedaling as a disclaimer to your self-contradictions again,,,, Nevertheless, you didn't tell him this, you told him it was "not really' a good set up, knowing nothing of the input levels other than he had a peak and tune that could consist of a lowered dead key and a higher swing.

>A radio

>that has been "bumped"

>mean it has been tweaked for more power)

>may easily exceed the maximum input levels

>for the amp. Even 4 legal watts will overdrive

>most of the smaller amps.

Here you go again, way off base speaking that of which you have no clue or personal experience. The Palomars are hearty little amps and can take more than the four watt drive input. In fact, they can take DOUBLE the 4 watt drive with no adverse effect.

>The makers of these cheap linears

>(that usually aren't very linear at all) don't tell

>you that the power rating is for -peak- power.

LOL,,umm,,that's how amps are rated.
You used the term linear, he called it an amp.

>Unless his Cobra is capable of FM, your point

>is moot.

Lucidity is escaping you, OM. *You* spoke of linearity and FM, no one
else. Remain relevant, if you dare.

_
One that is familiar enough to add new coax to a Wilson is more than
likely already aware of
this.

>IOW, a 300-watt amp will do 300 watts PEP,

>which translates to a maximum of 75 watts

>RMS (AM carrier power). Push it any harder

>and you will get a bigger carrier, but you start

>clipping well below 100% modulation,

>splattering your signal across the spectrum. -

Watts are watts, regardless of how they are measured. Refer to them as
RMS, PEP, or BIRD, as you have in the past...watts are watts. With many
radios, the blue faced palomar 250 will sing 100 watts all day long
without bleeding and they are very cheap.

>A common misconception,

And again, its your common misconception. I fact, you have exposed
several of your "common misconceptions" in this thread.

>hence the frequent

>and continuing occurances of RFI, and the

>increasing popularity of LP filters.

The majority of RFI cases are NOT from cb,,,in fact, the complaints and
actions to the FCC concerning CB "bleed" or RFI is less than one half
percent of total complaints lodged with the commission and even LESS get
acted upon. As if that wasn't enough to stop you talking through your
arse.............claiming LP filters are suddenly seeing a surge in
popularity by the "cheap linear" crowd is hilarious, but then again, you
are in a dark room with a loaded gun shooting wildly just hoping you can
hit something.
And since when have LP filters become "increasing in popularity" by the
cheap linear crowd? By what standards do you judge this? You have
claimed those using the cheap linears are cbers who don't give a damn
about bleed, so why would these same people suddenly begin purchasing LP
filters?
_

You also appear to be incorrect pertaining to modulation, as there are many instances pertaining to cb, when one wishes to achieve loudest optimum modulation, a power mic is required. Many times, this can cause the bleed over to begin. Remove the power mic in many applications, and the bleed can often be removed. I don't expect you to follow, Frank, you're still smarting after having your head handed to you after making the stupid comment that fiberglass antennas can have nothing to do with bleed issues.

>CB radios have modulation limiters which

Run like hell from that original topic, Frank,,,,,<g>

>prevent modulation from exceeding 100%

>(usually set for 90-97%). A power mic may clip
>and distort the audio, and if that happens just

>turn down the mic. But if the limiter has been

>disabled (as some monkey-techs like to do,

>one of their stupid "CB tricks"), the result is

>that the RF will start clipping and/or become

>unsymmetrical, both of which cause

>harmonics and 'splatter'.

In conjunction with amplifiers, this indeed can occur. With a barefoot 3 or 4 watt cb rig, any "splatter" or harmonics you refer become negligible and not a factor.

>And overdriving an amp is ALSO a cause of

>harmonics, as I described before. Cheap CB

>amps like the Palomar are rated in watts PEP,
>even though they don't specify them as such.

>The way to tell is to look at the spec sheet of

>the power devices (transistors) and find out

>how those are rated, which is usually for PEP.

>That is the case for the Palomar in question.

>The difference is that AM is measured in

>RMS.

Umm, Frank OM, you are the only one enjoying a discussion with yourself concerning how watts are rated. It wasn't mentioned (except by yourself).

>With an AM radio that does 4 watts

>RMS (which is also the carrier power), it

>outputs 16 watts PEP at 100% modulation. So
>if your AM radio is driving your 300-watt amp

>to 300 watts carrier -without- modulation, the

>result is some big-time distortion because the

>amp is incapable of meeting the 1200 watts

>PEP requirement for an AM signal at 100%

>modulation.

No one claimed otherwise, but a sideband education from you would be better received when you demonstrate a competent grasp of mag mounts and fiberglass antennas that are at times prone to exhibiting more RFI than metal antennas.
Besides, never was there an amp that required 1200 watts to achieve 100% modulation. Your modulation precentage is not dependent on an amp no matter how you slice it.
And how DO you expect to get 1200 watts from a 300 watt amp on AM, Frank?

>You should have had your Cobra 'dumped'

>instead of 'bumped'.

That's a personal opinion coming from one who doesn't know any better and bases his technical advice on nothing but personal emotion. Slight peaking and tuning is perfectly acceptable when done by a competent technician. In fact, Many cb radios can use a tune-up alignment after being shipped.

>Most experienced ampheads have their radios
>'detuned' for -lower- output power to prevent

>overdriving the amp. That's a fact, not my

>personal opinion.

Do try and remain relevant. You are so obsessed with amplifiers even when no one mentions them. Let's try it again for your benefit, shall we? You said, "You should have had your Cobra dumped instead of bumped" and I gently pointed out that is a personal opinion based on your strong presonal emotions you have a difficult time controling. As always, you wandered off topic and began babbling about "ampheads".

>As for a mag-mount, personally, I wouldn't

>waste my money.

Again, you don't know any better. Many of us have talked around the world on mag mounts, barefoot, on a regular basis. Mag-mounts are great

solutions for temporary mounts, rental cars, quick disconnects, etc.
Money spent on a Wilson is not wasted.

>It is to me because I don't need temporary

>mounts.

Touche......only, you were allegedly giving advice to another.... it was via your sockpuppet named ROCH, but thanks for clearing up that the advice you were giving was actually to yourself.....

> If I want to remove the antenna I just

>unscrew it. And I don't rent vehicles,

But of course you don't. After you told whatshisname that you couldnt afford to fly, that goes without say.

>I buy them.

And I don't build my boats, I buy them. Regardless, our personal nuances (even though you prefer to focus on them as opposed to pertinent topics) have nothing to do with other people finding the need to rent vehicles and having a need for temporary mag mounts, but then again, you are so out of touch with the majority of cbers you are unable to entertain any concept or scenario unless it appies directly to yourself....extreme narcissism and detached from reality.

>But you have,

Again, a perjorative personal opinion of yours. Lockheed Martin proved the efficiency of the Wilson in independent tests. You should check their test data and you may grasp why they are so popular and have legions of loyal customers,,,they make a tight product that delivers what they claim.

>Phen-fen had the support of independent tests
>and legions of loyal customers....

>Firestone had the support of independent

>tests and legions of loyal customers....

>Asbestos had the support of independent tests
>and legions of loyal customers....

>DT had the support of independent tests and

>legions of loyal customers....etc, etc, etc.

Try and remain relevant, OM. Citing and invoking other products do nothing for your position of claiming the Wilson Mag Mount is somehow an inferior product. AS usual, the world disagrees with you, as do the majority of competent antenna designers, electrical engineers, and amateurs.
In fact, the Pentagon and US government just hired Lockheed Martin to

DESIGN, CONSTRUCT, and implement THE definitive communications system
for the USA is the war on terror.,,but never mind that,,,,,YOUR opinion
supercedes the top minds of the US military's choice for communications.
It is Lockheed Martin and all their engineers, scientists, etc. and the
US military who is wrong and you who are correct.

>so you should know that 18' of

>coax isn't a reliable substitute for the terrible

>grounding characteristics of mag-mount

>antennas.

Again, only *you* were the one that tried to say there was a relation
between coax length and capacitive coupling with the 18 ft coax of a
Wilson Mag Mount. In fact, you have wandered off topic so many times
that coax length wasn't even mentioned except by yourself...LOL.

>If you want real power you need a

>real antenna, not a glorified refrigerator

>magnet.

"Real" is a relevant term. The Wilson will have no problem with the
amplifier he is using.

*3. on my amp it has a ON/OFF , HIGH, MED, LOW and a PRE-AMP on and off.
What is with the PRE- AMP.

>The pre-amp is used to amplify the received

>signal. They are mostly worthless because the
>usually much better than the S/N ratio of the

>pre-amps. IOW, they will just make the noise

>louder. However, they work great for older and
>low-end transceivers, and simple homebrew

>receivers.

The pre-amps are worthless by no means. They work absolute wonders when
the needle is flat with no noise for those extreme fringe stations. I've
used a cheap pre-amp on a regular basis to talk to the east coast of Fl
late at night,,,BAREFOOT.

>That's because you run a Tentec.

Not with the pre-amp I don't..no need. I run a lot of radios. In fact,
it (the pre-amp) works the same on my Pearce Simpson as it does on the
Rat Shack TRC-30A as it does on the Washington. The only radio I dont
use an external preamp with IS the Ten-Tec....no need. Using a preamp
late at night on 38 low I can often hit the east coast with 12 watts.

>Oh, and up North we have come up with a

>really cool invention that has been adopted by

>the vast majority of civilized society. It's called

>the "shoe".

Well, the quicker you remove mine from your arse the sooner you may lose your obsession and that bloated, anal retentive feeling that is responsible for your self-created misery.

*Ok I know I will take a beating from some of you and that is part of the game but any help or any suggestions would be great.

>Here's your beating: If you want to play

>hammie', get a license.

There you have it,,,,your problem with CBers..you feel running an amp is "playing hammie",,a feeling that is YOUR problem, no one elses, regardless of how you project your dilemmas onto others.
Running an amp isn't "playing hammie" to all, just to those anal retentive status starved individuals.

>If you can't afford a license (about the price of

>a happy-meal), or if the test is too difficult

>(even when you are allowed to memorize the

>questions and answers before the test), then

>at least get yourself a book on the subject and
>learn what you are doing.

LMAO,,,,,piss poor advice,,,again. A no-code entry level license will teach him absolutely nothing regarding what he is "doing", as his doings are on HF.
Seeing as he can solder and change out a coax on a Wilson,

>He never claimed to have done anything of

>the sort.

Sure he did,,,he claimed he was "changing out the cable on the Wilson".

> Your communication deficit is acting up again,
>Twist.

You really are clueless of who you are talking to, Frankie.(hehe)..nevermind,,,,he indeed said he was changing out the cable on the antenna. That you fail to retain what you read is all one needs to know concerning who suffers the communication deficit, Frankie. I suggest you try reading the thread again s-l-o-w-l-y and come on back for that heaping of crow you enjoy me ramming down your throat.
With all the bullshit you have given this dude, he may run like hell

from anything hammie related, merely because someone like yourself is advocating it, and he wouldn't be blamed for doing so. It's just the manner in which you come across to all those you can't understand.

>You're just jealous because I haven't given

>you a good beating for a while.

You're forgetting things and rambling, blowhard, and once again, blaming me for your incompetence. I accept partial blame for your breakdown.

> Now go back to trollville and behave yourself

>until you are summoned for your next beating.

Beatings denotes violence,,,something you and scumbag KC8LDO have promoted and advocate against those you are not able to maintain rational debate with or control your emotive responses.

KC6ETE, Extra class. Works for me.

I was asking the original poster if he has a ham ticket, just curious.

I agree about the Gel cells or AGM batteries, but most people
would ruin them with careless charging and deep discharge.
I figure a good power supply works OK without the hassle,
but whatever works!!

Hi all, Anyone out there know of a source for the old style
silver pull up walkie talkie antennas??
I need a few that are about 60 inches fully extended.
When fully closed it is 8 1/4 inches and the bottom section is 3/8 wide.

THANKS for your help

yes the amp company never makes it so it puts out max power they
always put stuff in it to hold it back so what you have to do is take
out all the resistors and change them to a lower value. The resistors
limit the watts it will put out so changing them to a lower value will
let more electricity flow and give you more power. The other thing is
to put gold connectors on the power and antenna leads. That will give
you at least 30 more watts out. Some people soak them in salt water
overnight first before installing them so as to make a better ground
plane. Also change the power cord to a heavy duty cord so more current
will flow and you will be louder.

I just recently picked up two that are very similar from Radio Shack,
for a 10 to 20 Meter portable dipole. The ones that I bought extended
from 13 to 72 inches but they did have several other types with varying
lengths. They were only $5.00 each. I adjusted the diameter with
a little electrical tape.

Is 4/0 CU welding cable big enough for 100 watts?

Hello Mr. Jimmie,,,,,I was wondering if you would be so kind to show Frank your impeccable method of quoting.. Frank has been using as anonymous newsfeeds posting service and has been complaining that he can't figure out how to work it properly.
Yes, over time running frequent power can screw up the paint on a vehicle and all kinds of variables can come into play when using a mag mount.

You can't discuss amplifier usage without talking about modulation.
That's like talking about fishing, without discussing bait or lures.

HI, thanks for the reply. I'll check them again.
Was there about a year ago and asked the guy about the antennas.
He looked at me like I had 3 heads!!!!
Then I said, silver, pull up, antenna. He said I think I know what you're
talking about
but we don't have that.
Like the catalog should have said.
Radio Shack, you have questions, we give dumb looks!!! DUH

I saw an antenna on a truck, it was a center load. About 4 feet long, white coil. I waited and ask the driver what kind it was. He didn't remember, but said it was really inexpensive. Any ideas what kind it was?

If the coil was about a foot and a half long or so it MIGHT have been
a hustler. These worked fantastic, they were from the late 1960 / 70's.

They made them for 2 meters also. These were tall antennas and WORKED!!
If that is what you saw.
73

Hi,

I would like to know if anyone out there has had any experiences with retailers selling CB's or CB accessories.

I am also looking for feedback about any after sales experiences you may have had.

It can be good or bad, but I want to hear about it (I would also like to hear about your EBay stories too).

If you have any experiences you might be interested in sharing please email them to me. If you DON'T want your story to go on my website, please let me know in the subject line, but I am really looking for stuff that I can put on the site and we can all share.

Who would you never deal with again? Why?

Who do you often deal with. Why?

It doesnt matter if it is a national chain of stores or a local outlet, I want to hear about them all.

Reply to the group, or email me at aussiecbradio@hotmail.com .

Modulation was not part of the original discussion...Frank tosses it out to obfuscate his incorrect points.

>Modulation IS an integral part of any amplifier

>discussion.

So is electricity, but it doesn't make it relevant to the original topic. Again Frank tossed it out to obfuscate his incorrect points and voodoo
methodology.

>You can't discuss amplifier usage without

>talking about modulation.

You are unable to discuss it without speaking of it. The majority of others can grasp such a concept. Your inability to grasp or comprehend something does not negate its existence.
You are incapable of seeing all sides of issues and topics except that of your own myopic views and self-imposed limitations.
The two are not mutually exclusive by any means.

> That's like talking about fishing, without

>discussing bait or lures.

You have aptly demonstrated you can not entertain or comprehend concepts foreign to that of which you are familar. It is your right to insist on not acquiring any knew knowledge in life, such as your shining example of attacking one for informing you that you were incorrect on your less than stellar knowledge of FCC law.
And now you're going to attempt what you mistakenly feel are clever and pertinent analogies. Not even close, Davie. There are several types of fishing that require neither bait nor lures...Lobster season that just ended is but a single example.

>Until you can supply irrefutable proof that I (or

>anyone else) is hiding behind "sock puppets",

>then you need to stand in the corner. We're all
>tired of your sociopathic rantings of

>nonsense.

In the first manner, I need supply nothing to you, as you are no one, despite your sordid attempts at self-elevation. You are owed nothing, despite your insistence otherwise. In the second place, "irrefutable" is often not needed, as reasonable or probable cause that encompasses a probability factor for the defense or for the prosecution is in many cases, more than enough to complete the procedurals. Your own words have supported my contentions of your behavior. Hence:

>In other words you're shooting in the dark, as

>always.

I'm not the one haunted by bs claims about cbers getting busted. I'm not the one who claimed I had a Phelps Stationmaster then turned around and answered an inquiry concerning that antenna a few short years later with: "What Phelps? I WISH I had a Stationmaster".
I'm not the one
running around frantically trying to explain away my old posts. I'm not the one making posts and unable to remember what was said. I'm not the one with a slew of headers over the years claiming I only accessed the group in a single manner. Such behavior is reserved for liars like yourself.

>Ever since then I have ALWAYS used this

LOL..that's easy. This was made on 9//04/03:
>"I have ALWAYS had the ability to access the

>internet through a T1 line, as well as my dialup
>account."

And this was made on 10/15/02:
>"As far back as 1996, I have used this same

>account and my name is my name. Before

>that I was "squatting" on an account from a

>local college and used the "Sandbagger"

As you may have correctly surmised by now, there would be no need for you to "squat" anywhere or on anyone elses providers if you ALWAYS had your own ability to access the internet through not only your T1 line AND dialup, but your own ISP, as you claimed several times.

–

Now,,allow us to move on...take note of the posting host IP number below,,,,run it through google in this group,,,,,,voila,,,,,only your name and posts come back.

>So you're saying I'm the only one who uses

>this news server?

Since the 90's,,,,,yes.

> You are aware that the IP address listed is

We just finished with almost a foot of rain in some areas over tha past week. Critters and creepy crawlies are everywhere and the gator are on the move. Conditions are smoking and the skip is perfect. We took over the bayou when the rain stopped and the southside crew is taking care of our light work. 38 low rest of the afternoon for my afternoon drive down along the coast. Bye bye bye bye bye.

The topic pertaining to your latest whine-byte is whether the OT's Palomar is practical for use with his "bumped" Cobra. I qualified my disapproval with an explanation of how amps are frequently overdriven because of the operator's lack of understanding about the difference between carrier power and peak power, the difference being modulation. I did not "toss it out" -- it was an issue in the discussion of the topic that became a little too technical for you to follow. Maybe you could have understood the discussion a little better if you hadn't dropped out of junior-college; but alas, you choose to provide the world with an example of the classic underachiever, a person who has plenty of intelligence but no self-discipline, and no desire to accomplish anything beyond searching for undeserved recognition.

So have you found a job that pays money so you don't have to leech off your mother and the welfare system anymore?

That was a blast last weekend at Lorain speedway. Sterling blew up
his first car, and went to a back-up car..he still sucked. hehe

Bill Elliot won the shootout, but Kenny Schrader was right there
with him for the flag. Schrader then spun Elliot out into the infield
just for shits and giggles, Bill did about three 360's. (crowd roared)

We got some killer autographs and pics with Sterling and only had to
wait about an hour. They ran till dark with super modified and late
models after the Nascar doods split in a long ass Hummer limo.

It was fun for a scar fan. :)

Just before on this feed..O well. Things are good over here,
got the 440 out and now I'm working on the paint under the
hood that you can't get to, while waiting on some machine
work to be finished.

You bet I'm ready for Woodward, that is the best rolling
car show I'll ever see. In fact, I think it's the biggest
in the USA. If you ever get a chance to make it to Detroit,
plan it for the Woodward dream cruise.

You'll see damn near everything you can imagine up there,
and it's rolling!

|
| CB

At the risk of replying to a troll, I have to put in my $.02. K40 and Wilson both make respectable antennas but they are not the only choices. 102" whips are cheap and hard to beat. The open coil antennas and fiberglass whips can also be good. Just don't get one shorter than 4ft unless you have no other choice. Performance drops off dramatically at less than 4 ft.

Any antenna for CB that is less than 1/4 wavelength (102" whip with a spring) is a compromise. There are, however, other things to consider. A 6 ft. antenna on the roof of a car can outperform a 1/4 wave whip on the bumper. A 102" whip on the roof doesn't perform at all if it gets knocked off by an underpass. Just use the longest antenna you can, mounted as high as you can, and as close to the center as you can, and you'll be OK.

Chris

Been there, have some, they make many but no 25 amp that I can find. (25 amp continuous) But no 25 amp,
example; No RM-25A

They make RS-10A, RS-12A, RS-20A, RM-35A/M, RM-50A/M, RM-60M, 70M, RM-10A, RM-12A/M & etc....
No RS / RM 25.

We've now added all our crystal charts for free download/printing (PDF) on our site. These 36 charts cover about 95% of all American mobile & base CB models, and show exactly which crystal(s) affects which mode or channel. Very useful for troubleshooting "dead channels" symptom, or for modification to 10M or other freqs.

Check 'em out at: www.cbcintl.com/xtals/xtals.htm

We specialize in CB books, plans, kits, and high-performance CB accessories. Please visit our Web site to see all those "goodies" you just can't find anywhere else!

2186. FREE! "THE CB EPROM DATA BOOK" OF FREQ. MODS

Newsgroup: rec.radio.cb
Date: 2004-08-06 04:15:41 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <cf16h0dk8e4oku6a8mmj7v5ca2u9gjn96f@4ax.com>
Source record: 184996

FREE!!

For advanced techs and serious radio hobbyists, we're now offering a FREE copy of our previously published "CB EPROM DATA BOOK" by Martin Pickering. (EPROM = Erasable Programmable Read Only Memory.) We sold it for many years but it's now out of print. This little manual of 60 illustrated pages is an absolute GEM of CB technical knowledge you'll just never find anywhere else. And it's yours for FREE from our Web site.

This book reveals the secrets of advanced channel programming, and picks up where our "CB PLL DATA BOOK" (www.cbcintl.com/pllbook.htm) leaves off. You'll get a thorough background in how these amazing programmable chips can be used to modify many popular CB PLL circuits for expanded frequency coverage. Covers the basic programming techniques, and even includes real PC board artwork for making EPROM circuits. Sample artwork includes EPROM boards for the popular MB8719, PLL02A, ï¿½PD2824, and ï¿½PD858 PLL circuits.

Best of all, the price is right! Download your FREE copy of "THE CB EPROM DATA BOOK" (948 KB Adobe PDF) at:

www.cbcintl.com/docs/EpromBook.htm

Don't forget to check out all our other CB specialty books, plans, kits, & high-performance accessories at:

www.cbcintl.com

The meter reading matches what I would have expected to see. I did measure
another mag mount and got around 150pf, BUT that one was missing the
aluminium foil sheet that should cover the bottom.

>
> However, this is one component you have not measured, and admittedly
> so. It also begs discussing other sources of failure that go
> undetected. Extrapolation from 1Khz to 27Mhz is tenuous if not
> fraught with large scale error.

The capacitance meter used is not based on using frequency. Typicaly they
will use a constant current source and measure the time to reach a fixed
voltage on the capacitor. Since using a constant current source results in a
linear rate of charge the time required to reach a fixed voltage is directly
related to the capacitance. Using this method there are NO frequency effects
to screw up the reading.

> good radiator. The two have nothing to do with one or the other.

You should know better. Many many antenna maufactures take advantange of the significant resistance of the loading coils they use to raise the feed point impedance to something near 50 ohms. A very short, electricaly, antenna may ony exibit several ohms of impedance at the operating frequency. I've even used my RF impedance bridge to confirm it. If the loading coil in series with an antenna can raise the feed point impedance, then a very losy capacitor in series can do the same.

> If
> you can confine a "bad match" to the points between the ends of a

> highly efficient.

I think everybody knows that antennas have standing waves on them, but that doesn't have a thing to do with coupling the sheild of the coax to a ground plane, which by the way is the main point which you haven't addressed.
>
> >The feed

> resistor and make the same claims. The lower efficiency so casually
> dismissed runs to 4dB; however, that is at the extreme of your range.

And the manufactures of those real stubby mag-mount antennas do just that effectively by using real high loss base loading coils. But don't tell the unsuspecting CBers that.

>
> This gracious discarding of power only speaks of the scenario where

> As such, I will assign it a plate separation distance of half the
> overall cable O.D. or 0.105". Plugging and chugging through the
> standard formulas results in several hundred pF.

Two problems. One the RF is confined to the area between the shield and the center wire in the coax. Second if it isn't then you have unbalanced currents flowing on the coax thus making the coax a part of the radiating system, not to mention the fact that the RF current at the antenna end of the coax isn't the same as at the transmitter end. And that has to be the case because what current flows through the capacitance to ground along the length of the coax can't exit at the end. Think about what your SWR meter would make of a situation like that.

Capacitive coupling to the body of the car is required where direct grounding is not possible. If you don't believe it then stick a known mag-mount antenna on a car, run the coax away from all the sheet metal, and check the match. Then disconnect the shield inside of the base and see what happens. Then for further proof directly ground one end of a capacitor, in the neighborhood of the values discussed here, then connect the shield of the coax to the free end and check your match, Remember to keep the leads real short to prevent the extra wire length from detuning the antenna too much. That should be sufficient to make my point.

Frank I design Induction Heating power supplies for a living, including RF.
I'm probably more aware of capacitor characteristics that you may think.
I've had custom capacitors designed by another company in our group
specifically for applications in some of our equipment based on my
specifications. I've tested capacitors to failure under all manner of
conditions etc.

> Why are mica, air and vacuum caps sometimes preferred for RF

Little to no dielectric heating in the case of mica and the vacuum type is
used where you need to handle very high voltages without using very high
plate to plate spacing in an air dielectric type. Also some of those air
dielectric types burn up the ball bearings from arcing due to poor contact,
where used, that support the shaft. Something to watch out for when shopping
for used parts.

> over ceramic?

The ceramic has higher losses. I've blown enough of them up to know. You
also have to watch out how much current those little disk jobs carry. The
plating on the ceramic can lead to unexpected I^2 R losses on them too.

>Why not just use electrolytics?

Unless they are specially designed they don't have good high frequency
characteristics, high ESR, and they typically can't handle high levels of
ripple, AC, current. Somebody had us design a power supply doing 5KW using a
single phase supply, I had to use a load of electrolytics to keep the ripple
current below the cap's ratings, which wasn't much.

> Of course you know the
> answer, and that's why if you are going to measure a capacitor you
> MUST measure it at the operating frequency. And, if possible, under

If I wanted to know the impedance yes. But if all I want is the capacitance
without all of the stray inductance, capacitor loses etc. lumped in the

answer is no.

>
>
> > About the ESR, equivalent

I though I made it clear, I don't care what the ESR happens to be. I'm only
interested in the capacitance value.

>
>
> > Capacitive coupling to the body of the car is required,
>
>
> That's just flat-out wrong.

Frank I'm just going to call this thread quits. I'm satisfied with how the
mag-mount antenna works. If you don't agree then that's for you to deal
with. What I described matches what I have read, makes sense with theory,
matches experiments I've done some time back etc. I think you need to spend
more time researching the subject. Just remember that at one time some
people said the earth was flat, oh well.

Cool,
I'm still trying to make plans to go to a Bronco event in Arizona
in April. I nixed my plans to go to northern Oregon for "Son of
A Beach" in 2 weeks, 12 to 15 hour drive.
Have fun dude, it sounds like it a blast.

I doubt it. If you had such experience then you would know that
frequency plays an essential role in the application of any capacitor.

>> Why are mica, air and vacuum caps sometimes preferred for RF

See below.

> Also some of those air
>dielectric types burn up the ball bearings from arcing due to poor contact,
>where used, that support the shaft. Something to watch out for when shopping
>for used parts.

I've never seen anything of the sort since almost all air variables
are built with a type of grounding brush to the shaft, usually located
at both ends, and at the shields used to seperate the sections if it's
a multi-section cap. Ball bearings have never been relied upon as the
sole electrical connection to the shaft since they are usually coated
with some sort of non-conductive lubricant. If you had any of the
experience you claim you would have known that, too.

>> over ceramic?
>
>The ceramic has higher losses. I've blown enough of them up to know. You
>also have to watch out how much current those little disk jobs carry. The
>plating on the ceramic can lead to unexpected I^2 R losses on them too.

You missed the question. Regardless, the answer is because air, vacuum
and mica capacitors have a much higher Q at higher frequencies than
ceramic caps. IOW, with increasing frequency, the effective resistance
of the capacitor is higher for ceramic than for air, vacuum or mica
caps, the reactance being equal. Every dielectric will have a Q/f
curve. But that's only -one- of the reasons frequency is important for
testing. Others include dielectric conductivity (g increases with
increasing frequency), dielectric absorption, hysteresis, inductive
reactance, etc. Very few materials show the dielectric characteristics
that would make them suitable for RF capacitors, and I don't think
automobile paint is on that list.

>>Why not just use electrolytics?
>

The pure capacitance, or the "zero-frequency" value, is academic and
has no practical significance. Again, this is something you would know
if you had the experience you claim.

>> > About the ESR, equivalent
>> >series resistance, which is composed of mainly skin effect on the plates

>> >losses in the dielectric, this appears in series with the capacitance and
>> >simply adds to the resistive feed point impedance of the antenna. The
>feed
>> >point impedance of a typical 1/4 wave ground plane with the radials at 90
>> >degrees to the vertical element is around 30 to 40 ohms, so a bit of
>extra
>> >resistance makes the match look better at the expense of a lower over all
>> >antenna efficiency.

>>
>>
>> ESR is not just skin effect and dielectric losses. But skin effect
>> -is- a major factor where ferromagnetic conductors are concerned; and
>> dielectric losses in many materials mount up quickly with frequency.
>> Regardless, you didn't measure the impedance at operating frequency so
>> you don't know the ESR.
>
>I though I made it clear, I don't care what the ESR happens to be. I'm only
>interested in the capacitance value.

If you don't care about the ESR then you don't care about the
practicality of the mag-mount base as an RF ground since ESR is an
unavoidable confound in that or any other capacitance.

>> > Capacitive coupling to the body of the car is required,
>>
>>
>> That's just flat-out wrong.
>
>Frank I'm just going to call this thread quits. I'm satisfied with how the
>mag-mount antenna works. If you don't agree then that's for you to deal
>with. What I described matches what I have read, makes sense with theory,
>matches experiments I've done some time back etc. I think you need to spend
>more time researching the subject. Just remember that at one time some
>people said the earth was flat, oh well.

I suggested you perform the experiment as I did. It eliminates all
relevant confounds and gives an unextrapolated picture of how a
mag-mount base works. On the suggestion of another poster I have done
a second experiment which supports my conclusions, and also validites
the results of my first experiment. You have refused to do the
experiment, you have no justification to dispute it, and you are
demonstrating that your education and experience in the matter is not
even close to what you claim. So if you want to drop the thread then
that's probably a wise decision for you to make.

Even better, do the experiment I suggested previously.

Amateur Radio Newsline™ Report 1408 August 6, 2004

**

A WORD FROM THE ARNEWSLINE (tm) SUPPORT FUND

The following is not necessarilly for retransmission. I guess you already know that if you are hearing my voice on a closed-circuit advisory it means that Newsline is again facing a financial crisis. Well, you're right.

The solution to the problem really lies with you. Our world-wide all volunteer staff produces these newscasts for you. The all volunteer Young Ham of the Year Committee labors tirelessly each year to select a youngster to receive the Award. Joe Eisenberg, K0NEB, oversees the Newsline sponsored Roy Neal, K6DUE, Amateur Radio Mentoring Project database, doing so at no cost. The list goes on and on.

I too am a volunteer, but I have to be the realist. I'm the accountant who has to look at the bottom line and when it turns red, I have to say -- hold on -- there is no more money to continue. And that's about where we are right now.

So, here's the bottom line. If you want the newscasts to continue. If you want the mentoring program to continue and the Young Ham of the Year Award to continue, we need you to show it now -- right now -- through your financial support of Amateur Radio Newsline.

Remember that Amateur Radio Newsline is a federally chartered 501(C)(3) and California state not-for-profit corporation. This makes your donations tax deductible, whether you're an individual or a club. The address to send them to is the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California 91066. If you missed the address don't worry. It will be repeated at the end of this week's report.

For now I thank you for listening, for responding and offer you this weeks newscast which follows immediately. (ARNewsline Support Fund)

**

Amateur Radio Newsline report number 1408 with a release date of Friday, August 6th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The B-P-L battelground expands in California and Texas while a U-K repeater is ordered off the air. Find out the details on Amateur Radio Newsline report number 1408 coming your way right now.

(Billboard Cart Here)

**

THE BPL FIGHT: SAN DIEGO CA. UTILITY REPORTEDLY CONSIDERING BPL

San Diego California could be the next B-P-L battleground. This, as an informed source tells the CGC Communicator broadcast industry newsletter that San Diego Gas & Electric is considering the deployment of Broadband over Power Lines in its service area. Bill Pasternak, WA6ITF, is here with the specifics:

--

According to Gonsett's CGC newsletter, an informed source has told him that San Diego Gas & Electric's communication systems planners met recently and are seriously considering endorsing and sponsoring B-P-L on the unility's power distribution system. The newsletter also says that San Diego Gas & Electric is considering entertaining proposals to partner with vendors for one or more field demonstrations of B-P-L technology.

CGC says that these plans should be of concern to all users of the High Frequeny and low band VHF spectrum. This includes TV Channels 2 through 5 and possibly even Channel 6. The latter because spurious and harmonic energy could reach these higher frequencies.

According to CGC and its unnamed source, San Diego Gas & Electric is aware that deployment of B-P-L in its service arera could cause considerable radio frequency interference. Even so, planners at the utility still appear ready to proceed.

More on this as it develops. I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

Bob Gonsett is known on the ham bands as W6VR. He says that he has a call pending with San Diego Gas & Electric corporate communications department to determine the company's official position on BPL. Bob also says to stay tuned for updates. (CGC)

**

THE BPL FIGHT: A TEXAS TRYOUT

Meantime, Larry Pollack, of the W5YI VEC reports that Central Texas-based Broadband Horizons has launched B-P-L operations in three Texas communities. The pilot projects were launched in mid-June in the towns of Blanco, Burnet and Weimar. According to Mike Steele, Burnet's City Manager, the community has had great success with the initial start-up. He says the city plans to expand B-P-L service it to additional parts of the municipality. (W5YI VEC)

**

THE BPL FIGHT: A BIG WIN IN PEN YAN NY

Meantime the B-P-L test is over in Pen Yan, New York and it appears as if ham radfio has won this round. This,, with word that the broadband provider that's been testing B-P-L in Penn Yan reportedly plans to "move away" from that technology.

According to the ARRL Letter, the Western New York community of some 5000 residents has been considering various proposals with Data Ventures to offer broadband service. A B-PL trial had been underway in Penn Yan for several months.

The village reportedly would get 10 percent of the generated revenue. Now, according to an article in the July 28th edition of the Finger Lakes Times Online, the provider is now proposing to employ wireless mesh "WiFi" technology instead of BPL and ARRL C-E-O Dave Sumner, K1ZZ, has already congratulated Penn Yan Mayor Douglas Marchionda Jr and DVI for going with wireless broadband instead of B-P-L. (ARRL)

**

THE BPL FIGHT: SPOKANE GOES WIDE AREA WI-FI

Spokane, Washington has also opted for Wi-Fi over B-P-L. This as that city inaugurates a wireless Internet access system covering 100 blocks of downtown Spokane.

The wireless zone uses new technology that allows Internet signals to be transmitted more than a mile. This is far beyond the traditional 200- to 300-foot range of previous Wi-Fi systems.

The Wi-Fi area is divided into a private network for use by the city and an open network for the public. Public users can connect for two hours a day at no charge, and subscription plans are in the works for extended use. One Eighty Networks provided the networking for the project. (Published reports)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world WR6ABD repeater serving Aptos California.

(5 sec pause here)

**
RADIO RULES: NO MORE "GROUP X" CALLSIGNS

The ARRL reports that the FCC is no longer issue 2 by 3 format vanity call signs that begin with the prefixes WC, WR, WK and WT. The Commission has acknowledged that it erroneously granted more than 150 WR and WC prefix 2 by 3 vanity call signs from 1997 through September 2003, when it began rejecting such call sign requests.

In the late 1970s, the FCC announced a new Amateur Service call sign assignment system. It provided four standard call sign groups, designated Group A, B, C and D, delineated by license class and issued sequentially with no backfilling. The FCC's Bill Cross, W3TN, recently told the nation's volunteer examiner coordinators that the FCC also had a "Group X." These included WC or RACES, WR repeater, WK and WT-prefix 2 by 3 format call signs reportedly reserved for special-use licenses.

The FCC stopped issuing repeater call signs in 1983 and ceased renewing RACES licenses in 2000. After the current vanity program began in 1996, several ham clubs sought new and formerly held repeater and RACES-type call signs. When the Universal Licensing System came along in August 1999, however, the FCC encountered some licensing system programming shortcomings, including the anomalous assignments of WC and WR prefix 2 by 3 call signs as acceptable formats.

When the FCC implemented programming corrections that halted the issuance of Group X call signs in September 2003, it did not advise the amateur community. As a result, several amateurs who filed for 2 by 3 WC or WR prefix call signs had their applications dismissed without any explanation beyond saying that the applicant's call sign choice was unavailable. That remains the case. The FCC has not indicated whether it plans to address the WC and WR prefix 2 by 3 call signs it's already issued.

In a related matter, the FCC's new Amateur Radio vanity call sign regulatory fee of $20.80 for the 10-year license term goes into effect Friday, August 6. All applications received at the FCC on or after that date must be accompanied by the new, higher fee. (ARRL)

**

ENFORCEMENT: RIS ORDERS REPEATER OFF THE AIR

A 2 meter repeater in the United Kingdom has been ordered off the air after it was involved in an interference issue. The Leicestershire GB3CF system which operates on 145.600 MHz, was closed down on Sunday the 25th of July following a request by the Radio Investigation Service due to an alleged incident of interference.

Service will be resumed as soon as investigations have been completed. The report did not say if the repeater was causing interference to other operations or if it was being interfered with. (GB2RS)

**

RADIO LAW: FEDERAL COURT RULES AGAINST CALIFORNIA CITY

Meantime, on this side of the Astlantic a big win for radio operations but another major loss for a city in its fight to restrict towers and antennas. Bruce Tennant, K6PZW, reports:

--

The attorney for a Rancho Palos Verdes California antenna owner says that his client won a clear victory against the city. This, following a recent federal district court decision requiring Rancho Palos Verdes to allow him to operate a broadcasting business from his unoccupied home. The judge also ruled that the plaintiff, James A Kay. Jr., may seek damages and legal costs.

And this is not the first major loss for the city. Earlier this year, the U.S. 9th Circuit Court of Appeals ruled that another Rancho Palos Verdes antenna owner could seek compensatory damages against the city. As previously reported, Mark Abrams, WA6DPB, said he will file a claim for damage to his two way radio business while he and the city fought numerous court battles over the right to regulate commercial radio frequencies.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Abrams has a 52 foot tall antenna tower in his backyard. The city has appealed the case to the U.S. Supreme Court. The full story is on-line at
http://pvnews.nminews.com/articles/2004/07/26/local_news/news1.txt

**

RADIO LAW: AN ANTENNA FREE ZONE

A real estate developer in Australia has come up with some of the toughest property use restrictions ever dreamed of. W-I-A Newscaster Graham Kemp, VK4BB, joins us with the details:

--

VK2WI have reported on a story that the Albury-Wodonga Development Corporation has set some restrictions on its new 40 block Thurgoona subdivision, near Albury.

Listeners to this WIA National News service through the 146.75 repeater can shed any thoughts of establishing a shack in the backyard, as the corporation has banned the erection of free - standing garages or sheds. One may also forget about erecting any antenna arrays as the corporation has also banned external TV antennas, any TV antennas should be placed under the roof or be internal.

Satellite dishes are also under scrutiny; you can have one, as long as no one can see it!

For the Am ateur Radio Newsline, Im Graham Kemp, VK4BB.

--

With these restrictions in place the potential amateur radio activity, using external antennas, is virtually impossible. (VK2GJH via WIA News)

**

RESCUE RADIO: WX4NHC ACTIVATED FOR HURRICANE ALEX

WX4NHC, the Amateur Radio Station at the National Hurricane Center in Miami was activated on August 3rd. This, in anticipation of the arrival of the first major tropiocal storm of the 2004 hurricane season.

Named Alex, the storm was a catigory one hurricane when the WX4NHC came to life at about 10 a-m Eastern on Tuesday morning. Catigory one means the storm had sustained winds of 75 MPH. It was forecast to strengthen before tracking just off the coast of North Carolina on Tuesday afternoon.

The WX4NHC Group monitored the Hurricane Watch Net on 14.325 Mhz. It also took part in EchoLink and I-R-L-P Skywarn Nets that were operational during the approach and departure of the storm.

WX4NHC has maintained an active Amateur Radio Station at the National Hurricane Center for the past 24 years. Please visit www.wx4nhc.org/WX-form1.html www.voipwx.net for details. (CQ)

**

RADIO LAW: IMPROVING AIRSPACE SAFETY

Garmin, Inc. has been conditionally granted its request to use 978 MHz as an aircraft radio datalink frequency. The idea is to enhance flight safety by enabling aircraft in the same airspace to precisely track each other's movement, reducing the risk of mid-air collisions. Datastreams containing location, velocity, altitude and heading are valuable commodities in the arena of air safety. More is o-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1871A1.doc (CCG)

**

ON THE NET: TEENS SET WIFI RECORD

A group of teenage hamss from the Cincinnati area got an ovation at the recent Las Vegas DefCon hacker conference. This, after organizers announced that the winners of this year's Wi-Fi shootout might have broken a world D-X record for ground distance in establishing a 55.1-mile Wi-Fi connection.

Ben Corrado KC8RKO, Andy Meng N8MX, Justin Rigling KC8OIO and Brandon Schamer KG4NVK won the prize for greatest distance achieved for an 802.11b network.

The teens, all 18 and 19 years old achieved the record using an amplifier and homebrewed antennas on both ends. This exceeded last

year's distance winner by 20 miles. Then, when they established that record, they turned off their amplifiers and broke the record for an unamplified connection at the same distance.

DefCon, in its 12th year is a gathering of hackers, security professionals and intelligence agents from around the world. The Wi-Fi shootout, held for the second time, is among the most popular contests. Six teams participated but it was ham radio know-how that came in number one. (N0AX)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

NAMES IN THE NEWS: GEORGE DILLON NAMED ASSISTANT CHIEF OF THE FCC ENFORCEMENT BUREAU

Some names in the news. Word that George R. Dillon has been named Assistant Bureau Chief of the Enforcement Bureau. Dillon most recently served as the Bureau's Engineering Advisor, assisting the Bureau Chief on a wide range of public safety, technical and management projects. He also represents the Bureau on the Commission's "Engineering-in-Training" Board, for which he received the Chairman's Special Achievement Award, and was the principal leader of the Knowledge Sharing Program, which permits field engineers and headquarters engineers to exchange information and expertise. He is also a member of the Spectrum Policy Task Force. FCC)

**

NAMES IN THE NEWS: G4IDE NAMED WINNER OF TAPR LIFETIME AWARD

And Tuscon Amateur Packet Radio has presented its Lifetime Achievement Award to Roger Barker G4IDE, of Lincolnshire, in the U-K. Barker was honored for his work over the years in providing quality software for Amateur Radio operators that allows them to operate advanced digital modes without the difficulties once associated with these operations. T-A-P-R says that Baker's UI-View program is the benchmark by which all other A-P-R-S mapping software is compared to. (VK2TDS)

**

HAM RADIO IN SPACE: NEW U-K HAM TRANSPONDER IN SPACE ANNOUNCED

AMSAT-UK has announced a new amateur band transponder project. One to be launched as part of the European Space Agency's S SETI Express satellite.

The project was announced at the opening of the 2004 AMSAT-UK Colloquium by Dr. Martin Sweeting, G3YJO. Sweeting expressed his delight that AMSAT-UK has been able to work with the European Space Agency to provide, at very short notice, an S band 2.4ghz transmitter.

The SSETI Express project is believed to be the first ever pan-European student satellite with over 100 students from more than nine different countries working on it. The project is being coordinated and managed buy the Education Office of the European Space Agency. (AMSAT-UK, GB2RS)

**

SPACE SCIENCE: SMALLER ISS PRESENCE ANNOUNCED

NASA and its space partners have approved a scaled-down International Space Station with fewer astronauts and less science. This, so the United States can meet a 2010 deadline for ending shuttle flights.

According to news reports, the space agencies of Russia, Europe, Canada and Japan gave unanimous approval to a NASA plan that means the orbiting platform, now about half completed, will never become the beehive of scientific and commercial research once envisaged. In exchange, NASA will continue with plans to launch research modules owned by its partners, some of them already built.

The agreement means the station will never support long duration crews of seven astronauts, as originally planned. It will however be able to house at least four astronauts starting in 2009.

Phase one of the space-station was put into orbit in 1998. The first astronauts took up residence in 2000. (Published reports)

**

ON THE AIR: OH2B BEACON IS BACK ON THE AIR

Finland's OH2B beacon is back on the air after an absense of two years. OH2B is one of the eighteen stations in the world-wide five-band International Beacon Project network. It has already been heard in the UK on 14.100, 18.110, 21.150, 24.930 and 28. 200 Mhz. (GB2RS)

**

DX

In D-X, word that K4ZLE is returning to Uganda. He plans to operate as 5X2A through the 21st of August. Some effort will be made to operate on the lower H-F bands this year, mostly on CW. Activity is

also planned for PSK31. (GB2RS)

And F6EAY is in Kabul, Afghanistan and has been issued the callsign T6RF. At present he is active only on PSK31. QSL as directed on the air. (GB2RS)

Closer to home K-7-B-V reports that he will operate portable VP5 from the Turks and Caicos Islands from August 9th to the 16th. The trip will have focus on 6 and 2 meter WSJT work during the Perseid Meteor shower that peaks around August 12. H-F will, of course, get plenty of attention as well. QSL direct to K7BV. (VHF Reflector)

**

THAT FINAL ITEM: THE BIRDS ARE BACK

And finally this week, have you ever tuned in an owl? Yes, we said an owl. You know, tne find that go hoot in the night. Newsline's Joe Moell K0OV will tell you how.

--

It's been several months since I've advised you of opportunities for hams and scanner fans to help wildlife researchers tracking radio-tagged creatures. You can monitor these signals from your home or car. If you have direction finding gear, you might make a positive sighting. Right now, there's a need for ham help in the Denton and Collin County areas of Texas, where researcher Jennifer Johnston is releasing rehabilitated orphan Great Horned Owls into the wild. Six birds are on the air near 150 MHz as I speak, and more are expected to follow. We're also standing by for the departure of some young Burrowing Owls from their nesting places in Florida. A biologist from the University of South Florida wants know where they will end up. Nobody knows, but maybe you can help find out.

For all the details, including frequencies and ideas for equipping yourself for this project, go to www.homingin.com. That's HomingIn, as one word, homingin.com.

Thanks for your help. From southern California, where Burrowing Owls are raising their young in our own Imperial Valley, this is Joe Moell, K-zero-oscar-victor, for Amateur Radio Newsline.

--

Again that website is www.homingin.com (K0OV, ARNewsline(tm)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org.

If its still there. Second the cheap recover type air variables use them,
and some people try to save a few bucks by pulling some of the plates out to
increase the air gap for higher voltage applications not understanding what
they are doing.

Dah, that's what I said Frank in different words about losses. The vacuum
variable is used for very high voltage ablications just like the vacuum RF
relays, no air no arcing. Nobody is going to the expense of using a vacuum
variable where an air job would work. At high voltages the required spacing
between the plates becomes so high that even a small valued cap is rather
large, so they use the vacuum variable to save space, but only if the
cost-space considerations make sense. You typicaly see them used in some
tuners because of the very high voltges that are developed to achive the
match.

> Every dielectric will have a Q/f
> curve.

I've seen the curves Frank. They don't have anything to do with the pure
capacitance of the device. And that's the point. You keep trying to very

unnecessarily complicate things by dragging in issues that have nothing to do with measuring capacitance exclusive of other issues. If you can't figure out that what you're measuring with a Z-bridge is a combination of capacitance, stray inductance with non-ideal effects from skin resistance thrown in, and the differenced between them circuit wise, it's apparent I'm not going to educate you any time soon. So like I said I'm not going to waste my time further on this thread.

2201. Question...mobile antenna "thinking out of the box"...

Newsgroup: rec.radio.cb
Date: 2004-08-07 00:24:00 UTC
From: M-Tech <mechtechllc@yahoo.com>
Message-ID: <ZJWdnWeOcMO-vIncRVn-oA@comcast.com>
Source record: 185011

Ok. Here's the deal. It's time for an antenna on my 2001 Silverado. It's an extended cab 4x4 and if I put anything higher than a foot on my roof, it's comin' off when I pull in the garage. So, I was thinking:-) What if someone took a center loaded antenna and mounted it to a swivel mount that was mounted to the bed, but in BETWEEN the bed and cab. When it was rotated 180 degrees the mount would be about a foot lower than the cab...leaving 48" of center loaded antenna above the roof. I could toggle the action using a 12vdc mechanism of some type. With the press of a button, the mount would rotate 180 degrees and point the antenna down, right between the cab and bed. Thus, instant antenna clearance without exiting the cab.

I've been told that a decent quality center-loaded will always beat a decent quality base-loaded antenna of the same height.

Thoughts? Opinions?? No laughing please:-)

Thanks

Don

No, that's not the point. The point is whether a mag-mount makes an
effective ground coupling via capacitance from the base to the vehicle
body. The fact is that it doesn't. And no matter how many indirect
measurements you make or variables you present in defense of your
opinion, you can't substitute them for a direct measurement at the
operating frequency.

I measured the impedance because the antenna and coax don't see "pure
capacitance". And I don't see how using the practical and real-world
value of impedance can "unnecessarily complicate things" because those
other issues are not only necessary, but unavoidable in practical use.
And a mag-mount is most definitely a practical use. Or maybe you would
like to explain why the inductive reactance and effective resistance
are 'unnecessary complications' with this or any other capacitor?

Take a look at the link below. Some commercial antenna manufactures have
already done something like this for Ham V/UHF antennas which are a lot
smaller, but I see no reason why it can't be done for a HF antenna for CB.
The mechanics would have to be a lot beefier of course.

http://www.rfparts.com/diamond/

Select "Products" from the menu on the left. Then select "Mobil Antenna
Mounts" from the list on this page. Then select "K9000TM" at the bottom of
the list on this page. The picture is along the lines that you described
and may give you some ideas to start your project.

Good luck.

There is a significant amount of capacitance between the base of the
magnet mount and the roof. Some mag mounts have special arrangements
of
conductive material, sometimes a foil which is on the bottom and is
(usually) insulated by a thin plastic membrane. This provides a low
impedance or Capacitive reactance to the roof at the base of the
antenna and
therefore is effectively an AC ground as far as the antenna is
concerned. I
have often wanted to measure it, but haven't yet. The ground through
the
coax, rig and negative power lead is completely irrelevant for the RF.
This
is because the distance along this path presents a significant
impedance
(without going into too much detail) and should be considered, for all
intents, an open circuit at RF.
My 5/8 MFJ has surprisingly little wind induced bend at the kind of
high
speeds I travel (60 mph). Thicker whip sections are better in this
regard.

--
Steve N, K,9;d, c. i My email has no u's.

Quoted from http://members.aol.com/homingin/newdopant.html

"Photos 5A and 5B show modifications to the CB mounts. I removed the whip
and holding nut, then carefully slit the bottom foil to remove the plastic
base cover. Besides covering the magnet to prevent paint scratches, the foil
provides important capacitance coupling of RF to the ground plane (vehicle
body). As supplied, the foil is insulated from the magnet and coax shield.
This is important, because the coax shield is not DC-grounded with the new
switcher."

The quote below repeats what I said before about the resistive losses simply
adding to the feed point impedance.

"

Mobile Antenna Notes
Alan Applegate (K0BG) on January 20, 2003
View comments about this article!

The majority of HF mobile antennas are electrically short. For example, an 80 M mobile antenna 8 feet long is electrically 11° in length as opposed to 90° of a full-sized 1/4 wave vertical. Thus, the input impedance is around 15 to 25 ohms depending upon loading coil position and Q factor, and ground and resistive losses. The formula is as follows:

Rt=Rr+Rc+Rg

Where Rt=total or input resistance (more correctly input impedance), Rr the Radiation resistance, Rc the coil resistance, and Rg the ground loss resistance.

We have some control over the radiation resistance, but for our example above, the Rr is under 1 ohm! Since it is a factor of the electrical length of the antenna (loading coil position is also a factor), we must lengthen the antenna to increase it. Obviously, there's a limit here. After all, who could drive around with a full 1/4 wave, 61 foot, 80 meter vertical on their vehicle?

The Rc is the resistive component of our loading coil, which cancels the high capacitive reactance of our short vertical. On 80 meters, the coil will have between 75 to 200 uh of inductance depending upon where in the antenna it is located. The higher up the mast it is located, the higher the radiation resistance, but the larger the coil (inductance) needs to be. There is a trade-off limit, however, because the larger the inductance, the greater the resistive losses of the coil. The reactive resistance versus the resistive losses determines the "Q". The higher Q, the less loss, and the more efficient the antenna will be. On 80 meters it is difficult to obtain Qs much over 200 and even this much requires good construction practices. The ratio between diameter and length to maximize Q is 2:1. Imagine running around with a spare tire-sized loading coil!

The Rg or ground loss resistance typically varies between 2 and 10 ohms, but can be much higher. It's mostly a factor of the size of the vehicle our antenna is mounted on, and how and where it is mounted. Remember our vehicle is not a ground plane for the lower frequencies, but rather a capacitor to ground. Rg can be minimized by proper grounding (bonding) all bolted-on parts including doors, hoods, trunks, tail and exhaust pipes, bumpers, etc. Mounting the antenna as high as possible on the vehicle also helps as this reduces the coupling to ground (we want the vehicle coupled to ground, not the antenna). Avoid using bumper mounts, magnet mounts, trunk lip mounts, and similar devices.

In just about every case, an HF mobile antenna will have an input impedance of less than 50 ohms, and typically between 12 and 35 ohms. Obviously if we wish to obtain a low VSWR, we need to match our 50 coax feed to the antenna. There are several ways to do this, but the easiest is to use a 4:1 unun.

Attached to this article is a schematic diagram of a 4:1 unun. Unun stands for Unbalanced to unbalanced, as opposed to Balun, which is Balanced to unbalanced. To the left is our 50 ohm input, and on the right a 12.5 ohm output. By tapping 1/4, 1/2, and 3/4 of the way along the top winding, 1.5:1, 2:1, and 3:1 ratios can be obtained. Or, 33 ohms, 25 ohms, and 16

ohms. In all but the extreme cases, one of these taps will closely match just about any mobile antenna. Using the chart in the ARRL Antenna Book, or by using an antenna bridge like MFJ's 259B, we can guesstimate or measure the input impedance of our antenna and select the best tap.

Construction is easy even for a novice builder, and the ARRL Handbook gives a lot of good tips on how to wind one. In short, the untapped winding should be insulated from the tapped winding with Teflon or high-temperature plastic sleeving or tape. A T200-6 is the best bet, but a T200-2 can be used. The core should be wrapped with glass tape if high power is contemplated. AWG 14 wire is adequate for 1,000 watts of power, and will allow an 11 to 12 turn bifilar winding. The transformer should be mounted close to the base of the antenna, and protected from the weather. Cores, glass tape, and Teflon sleeving may be ordered from Amidon, Palomar Engineering, and many other sources.

Now let's digress for a few moments and take another look at the inherent losses of a short, mobile antenna. Referring to our original formula above, Rt=Rr+Rc+Rg, let's read between the lines. If Rt is say 40 ohms, and affords us a 1.25:1 VSWR, what and where do you think the other losses are? Most generally they are in the coil, and to a lesser degree the ground losses. You might ask then, what does a lossy coil looks like? Well, one thing's for sure, it isn't spare-tire sized!

Many commercial mono band and multi band short mobile antennas will match 50 ohms quite well due to their resistive losses. This author recently measured a 6 foot long, helically wound, bumper mounted antenna with an MFJ 259B, and got 64 ohms at resonance on 40 meters! Its approximate efficiency is under 2%. That is to say, fewer than 2 of those 100 watts inputted were being radiated, and the guy bragged about how well it matched! Well guess what? I have an antenna with a 1:1 VSWR from DC to 1.2 GHz. It's called a dummy load! If your antenna matches as well as this one did, you need a better antenna.

One last bit of information... A VSWR bridge cannot measure phase angle, and therefore cannot be used to determine the actual resonate point of any antenna other than a purely resistive one, and that just doesn't happen very often, especially with mobile antennas. What it does measure is the (lowest) voltage, and because an antenna has reactance, the voltage and current are not in-phase. Without a good noise bridge or antenna analyzer, it is mostly guesswork. In short, don't rely on a VSWR bridge to adjust your mobile antenna.

Alan Applegate, K&#65533;BG"

Quoted from http://www.theantennaguru.com/mobile__installation___faq.htm

"No matter how well designed the vehicle may be, one must still keep short RF grounds at strategic locations to prevent interaction with the vehicles systems. Always pay attention to ground loop conditions. Too many grounds

can also present a problem in a mobile environment. My antenna system is only RF grounded via the six large magnets, there is no DC ground at the antenna. The Capacitance of all magnets to ground is sufficient for a god RF ground.The capacitance of one magnet can be measured with a simple capacitance meter. Then the number of magnets in parallel will equal the total reactance value at the frequency of interest. Consideration should be given to ferrite cores on the antenna transmission line and on all wiring to the antenna and control systems."

Quoted from http://www.ve3gk.com/latesmobant.htm

NOTE THE SIX, THREE INCH SQ MAGNETS OFFER FIFTY FOUR SQ IN OF CAPACITIVE SURFACE USING THE CAR PAINT AS A DIELECTRIC TO THE ROOF TO ELECTRICALLY COUPLING THE REFLECTING GROUND PLANE. IN FACT, IF I LIFT THE ANTENNA OFF THE ROOF, SLIGHTLY, SIGNALS DISAPPEAR.

<snip>

Your quotes include no statement of -fact- that conflicts with the
conclusions of my tests. IOW, your sources point out the facts that a
mag-mount has one or more magnets, holds an antenna, and has a coax
attached between it and the radio. One of them agrees that you can
measure capacitance with a capacitance meter. To all of this I have no
dispute. But it seems that I am the -only- person who has made the
effort to actually measure the ground impedance of a mag-mount base at
operating frequency. Without any facts, a few quoted opinions from the
internet do little to convince me that this capacitive-coupling theory
is based on anything other than speculation.

Well, since no one is guiding me, I have fallen into yet another discovery that is sure to set the cb'ers on their ears......all mobile antenna's being the same length, the most efficient will be the fiberglass "full length loaded" whip. Ok, maybe you all knew that. I didn't:-)

That makes construction of my "swivel bracket" even easier since I don't have to worry about the diameter of the center "coil" and the clearance between the bed and the cab. I'll also be dealing with a stiffer antenna so I don't have to be concerned with wind whiping the antenna against my truck when in the down position.

Now I just have to procure a good fiberglass whip antenna. There's plenty of truck stops around here.....truckers generally sleep REAL deep. I'll just stuff a pillow under my T-Shirt so I look like I'm about 300lbs and let my ass-crack hang out and remove a fiberglass whip from a nice KW. Anyone seeing me will think I'm just the driver.

I'll have film at 11.

M-Tech;

If you get your motorized CB antenna mount working how about posting some pics on the net. I'm sure some of the CBers on this group would be very interested in looking at your design. Some may even want to try making one for themselves. If the idea in cool enough you may even get some people asking you to make them one too. That's how one Ham got in to the antenna business making so called screwdriver HF antennas for mobile HF work.

Heck it's likely your CB antenna you've brag about being on your so-called
tower. What a joke. Anyway do you know any of the following businesses?

Barco Sons Inc.
935 W Liberty St.
Medina, OH 44256-1321
330-722-3038
Company Officals: Bob Barco (manager)

Morlock Materials
6126 Norwalk Rd
Medina, OH 44256-9453
330-723-2585
Company Officals: Dan Morlock (owner)

Susan's Garden
2000 Wilbur Rd
Medina, OH 44256-8494
330-239-9433
Company Officals: Susan Gray (owner)

Peters Professional Landscaping Inc
6984 Lafsyette RD
Medina, OH 44256-8580
330-722-8884
Company Officals: Chris Peters (president)

North Royalton Nursery Inc
4463 Weymouth Rd
Medina, OH 44256-9249
330-725-4755
Company Officals: Michael Montemarano (president), Angie Lombardo
(secretary),

Joe Lombardo (vice president)

L & L Shetler's Lawn Mower Inc.
Shetlers Outdoor Power Equipment
999 Lafayette Rd
Medina, OH 44256-2414
330-722-14111
Company Officals: Leonard F. Shetler Jr. (president)

Organic Way Inc
The Place
2377 Medina Rd
Medina, OH 44256-9666
330-239-4000
Company Officals: Andrea Reedy (president), Raymond M. Klubnik (cheif executive officer),
Michelle Albright (treasurer), Donetta Klubnik (secretary)

Ever Sharp Power Equipment Inc.
2480 Medina Rd

No, it's -your- coax run. Why are you so ashamed of it? Here's
another view of it folks, it you look closely at the top of
the entrance door, you can see Leland's -antenna farm- being
held down by a cinder block! What a fucking hack!!! ROFL!!

You could use a ball mount and then just take the
allen wrench and loosen it, swivel it down. Also you
can just use a quick disconnect, It's easy and works.
As for an electric swivel, seems like a lot of work, but
give it a try, let us know how it comes out.

| I think I found the answer to that one too....center loaded is better.

There are good antennas that are base, center, and top-loaded. It depends on the application. Just make sure the coil is above the roof. The exception is a shunt-fed base-loaded antenna. They work great on the trunk of a car or on the roof.

Chris

| Ok, got a HR2510. Throw in 1 center loaded wilson 1000. Combine with
| custom antenna mount.
|
| Yields one nice radio install:-)

You're too chicken to answer the question I asked. Just state your real name and address or don't you have the nerve? You want to take a swing and me, then fine I'll shown up on your door step, save you the trouble of sneaking around, but you have to have the balls to meet me like a man at your door.

Funny steveo. I guess your CB mag-mount didn't work too well on the frig so
you put it outside on your so-called "tower".

Well, rule of thumb is 4 to 7 lbs per 1000 sg ft, so lets go
with 5 as a round number (250 lbs).

I buy most of my seed from LESCO, if there's not one close to
you, go with a landscape supply outlet. Be sure to check the
germination test date and weed content located on the tag.

Weather sure is strange, here in northern Ohio we've had
a really wet spring. I haven't even used my irrigation
system yet..

Good luck.

If you are going to do that then carry a letherman anf take it off :) I
have to sometimes park in a garage with a low clearance and bought one of
these :
http://www.walcottcb.com/catalog/product_info.php?cPath=29_59_112&products_id=262&osCsid=b
3023896b1811b979bde3486abe2288d
I got tired of removing it. My antenna is in the rear corner of my bed on a
stake hole mount. I had a quick disconnect but someone other than me
disconnected it, now I can't seem to locate it :)

One thing I've never understood are people who mount the antenna right next
to the cab and use a 3-4' antenna. How does that affect the performance of
the antenna? how 'bout SWR? This is one of the reasons I went for a rear
mount. Even better than that are the sect of morons around here with big
ass dual 5' fiberglass antennas on a pickup truck. Even worse than that,
some don't have them hooked to anything (no radio) Hell, if you are going
to spend the money to look like you don't know what you are doing at least
buy a coupla 259's and a few feet of coax so it LOOKS like it's hooked to
something. sheesh.

ok ya'll mentioned akc so i started looking for the beginnings of AKC to see what it referred to, and came across this post and it gave me a laugh, but still didnt find what was AKC...lol
harv

Walking up to the counter at 7-11 George handed the clerk a $100.00 bill.

Looking incredulously at the bill, the cashier, in a snappy tone, exclaimed "I
can't break this! I need exact change."

"Come on buddy." George pleaded, "Can't you give me a break, just this once?"
"Nope. Sorry. Exact change!" Answered the cashier.

"While thumbing through the change in his pocket George asked the cashier, "Do
you really like this job?"

"Well it's not the best job that I've ever had, but it pays the bills," replied
the cashier. "what do you do for a living?" he asked.

Still counting change and without looking up George said, "I'm a rectum stretcher."

"A what?" asked the cashier.
"A rectum stretcher." George replied, giving the cashier a slideways glance.

"What does a rectum stretcher do?" The cashier asked.
"Well just as the name implies, I stretch rectums." George explained setting aside a nickle.

"Wow, is there much call for that kind of work?" The cashier asked.
"Oh you'd be surprised. It's real popular with the upper crust, the high society people, the jet set. It's the new trend." George said.

Pausing for a moment the cashier then asked, "Well if you don't mind me asking,
I mean if it's not too personal, how big do you, well you know...?"

"...How big do I stretch them?" George interupted. "Most of them, not too big,"
He continued, "but I have stretched some up to six feet."

"SIX FEET!" The cashier exclaimed eyes wide, and jaw slack. "Six Feet. What is
someone going to do with a six foot asshole?"

George, having counted out the exact change, handed the change to the cashier.
Looking him in the eye, George answered, "Give it a computer, let it post to the rec.radio.cb calling itself the A.K.C."

Just a quick update...for those of you following along:

1. I was offered a company car today, therefore, I'll be in my Silverado less....so that takes the time-crunch off the project.

2. I did a little investigative work on Saturday. Looks like I'll be able to design a "cover" that mounts where the 3rd brake light is. Of course, my housing would have a relocation plate so the light would still work and would essentially be in the same position. I selected this because it was something in "common" with most/all trucks.

3. I started a drawing(Autocad)in which I'll draw in 2d until I'm pretty happy with the mechanics. Then I'll do a final version in Solidworks. I'll provide a link when I get to it:-)

In the meantime, I'm still trying to locate a friggin' radio!!!! Man, it's tough.

Exactly what I'm trying to prevent. Theft, forgetting about lowering the antenna and exiting the cab to do so. Whatever I come up with needs to do 2 things.

1. Break away in case you forget to lower the antenna.
2. Raise and lower the antenna....in some function.

I KNOW I'll foget to lower the antenna mount!!! LOL!! I can picture it laying on the tonneau cover now....hehe

The Titan Roadpro RPSY-201 does AM, FM & SSB from 26 to 30mhz
I have one and love it. Does everything my 2510 does. Of course with
limited
range since it's a handheld.

Interesting, thanks for the link.
I've never had any problems with my quick
disconnect leaving without me, but that mount
looks good too.

So is electricity, but it doesn't make it relevant to the original
topic. Again Frank tossed it out to obfuscate his incorrect points and
voodoo
methodology.

>The topic pertaining to your latest whine-byte

>is whether the OT's Palomar is practical for

>use with his "bumped" Cobra.

Again, so is electricity but you can't seem to focus on the topic which
has nothing to do with modulation.
Besides, Incorrect as usual,,,in fact, you're on a roll of being wrong
lately, from your poor advice on a palomar to your pooor advice on a
Wilson mag mount. Once again, the modulation factor has absolutely
nothing to do with the original thread where you screwed up and made a
bunch of technical errors. You always invoke a bunch of non-related junk
(see your incompetent response to Lelnad) when you've been taught you
are wrong.

>I qualified my

>disapproval with an explanation of how amps

>are frequently overdriven because of the

>operator's lack of understanding about the

>difference between carrier power and peak

>power,

The only thing you "qualified" was your bias by making untrue statements based on nothing more than pure emotion and not facts.
You ran from the topic and invoked your own when you found yourself surrounded by your own incompetence and then you began to menstruate all over yourself because you still can't figure out how to quote properly after all this time (with your fourth access to the group) and need blame others for your self-imposed limits. See Mr. Jimmie in the Carolinas for a quick education on flawless quoting, as blaming others for your mild retardations and massive communication deficit and incompetence at all you do has you beside yourself and quite frustrated. Rock on!

>It's interesting to note the point at which you

>snipped my post.

Sure is,,,in fact, I did it right after you shared your inability to follow the thread by complaining and blaming me because you're too stupid to figure out how to quote properly after all this time with your anonymous newsreader.

> If you hadn't snipped it where you did

.....you wouldn't be able to follow any of it....I understand, Frank, You need spoon fed and taught everything,,,,,which is why I "snipped" your mess where I did. In fact, there would have been no "snip" at all if you didn't start crying about your inability to operate your browser properly. I did it for you, Frank, as you are having problems beyond your normal comprehension, but it's fun to watch you come apart and get mad and blame everyone else when you are unable to make your feelings and communications effectively known to those you address.

I've been shopping for a base CB. The first one I was sold on was the Cherokee CBS1000, it looked easy to use and modify and it had weather channels. Something good in the sticks in Illinois during tornado season.

but.... The Galaxy DX2547 has been catching my eye. It appears to be a more robust and intuative radio, Although lacking weather band (weather radios are cheap) it looks as if it would smoke the cherokee from looking at the inside photos.

The cherokee's are going for way more than I am willing to pay for a radio that just doesn't look that robust, I would gladly pay the galaxy price for a more quality product.

What are your takes on these products or do you have any other suggestions?

Chad

Source record: 185080

Hi all,

question about my mobile stuff:

I was in Poland for holiday with my President Lincoln to use for nice DX'ing. Only first night went well, made contact with Portugal, UK and Russia.

Next night I would make a new attempt to make other nice contacts but I had absolutely no reception on the Lincoln.

Then I connected the antenna without the earth in my amplifier, wich is a KL400, and I heard lots of stations!

I was using this antenna: http://www.sirioantenne.it/prodotti_ant.php?idc=1008171255&idg=1008171169&idp=120 (links to the Sirio ML 145 MAG) wich can have a max load of 300 watts.

What can be the problem in your opinions, anything would be welcome very much, since I only can make use of mobile radio. Thanks for your ideas!

This is 19ac387 op Marcel from Holland saying 73's !

Well, at least you didn't reply to yourself this time.

So have you been able to find gainfull employment so your mommy doesn't have to hold down two jobs? Oh, and if that military group really exists (that is, if it exists somewhere other than in your imagination), try logging in and getting someone to explain to you how enlistments work..... hmmmm, now -there's- a thought..... how about joining the US military, Twist? Heck, you can get a job -and- learn how to live responsibly. Of course in order to get in you'll have to lie about your age..... and your employment history, your criminal history, your problems with mental health, and then come up with an excuse for being on welfare because of your "disability"..... ok, forget I even suggested the idea. After all, you would never survive boot camp with your lack of discipline and attitude against authority, not to mention being physically out of shape because of your sedentary lifestyle (I don't think that trolling Usenet and freebanding are on the AMA's list of recommended activities for healthy living). And since you couldn't even finish junior college, you can't qualify for too many job openings in the civilian sector, can you? So maybe you really -do- need to be supported by your mommy and welfare.... maybe you really -are- disabled!!!

I haven't paid attention to the price since they arrived on the market.
I think they were a bit more than that when they first came out, but
that seems about right. I have a friend in western Michigan who has one
and raves about it. Good luck with your purchase and let me know how it
turns out. No used ones to be had is probably a good thing. Those that
bought them must be keeping them.

>really -are- disabled!!!

What an emotional wreck you have become, Frank. You are unable to contain yourself in any exchange with myself. Your emotions are too strong and you have not managed how to exercise self control. The world understands the anger you direct towards those that educate you on matters relating to real world applications of radio, but your insistence on remaining ignorant is your right. Lelnad even tried to school you on what's right and you began insulting him when you finally managed to grasp that he was right and you were wrong. You're an emotional train wreck, Frank. Feeling threatened to the point you resort to insult directed to all who dare ever disagree with your self-limiting ignorance is your problem, not anyone elses. You have extremely low self-esteem. Your radio knowledge has been shown to be fluff.

Have the following CB equipment for sale.

These items are sold as a package deal only. Cobra 148GTL,with 7 amp P/S,Radio Shack watt/SWR meter (20-200-2000 watt),Magnum 2500,250 watt mobile linear. All equipment in good cond. Price is $150.00 + shipping from 96002

300 watt solid state base (120vac) linear. Commander model B3000. Works 100%. A great match to the Galaxy Saturn,etc. base radios. Is all black w/white lettering,big meter,fan cooled,etc. Uses a pair of MRF 454 finals. Price is $250.00 + shipping from 96002.

I can email pics. Please email me direct at kf6ikc@sbcglobal.net as I do not read the group list very often.

Take care,Stan

How many amps does a mobile cb radio draw? I have a Uniden Pro520xl. I computer power supply has 12volt connections would it be enough to power the radio? I have a DC plug adapter that is 14volt, 360 milliamps and a 13 volt, 800 milliamp. The 14 volt plug gives poor audio quality even from a 100 feet away and the 13 volt just blows the fuse. Any comments?

Chris;

Using a computer power supply is a poor choice. Your radio likely draws several amps and computer power supplies normally don't provide that much current for the small ones. Also the power supplies don't provide properly regulated output voltage unless the output(s) are loaded enough, generally the 5 VDC output. Some people have had some luck using these supplies but unless you're prepared to spend time experimenting I would pay out the money and get a ready made commercial power supply designed to power auto accessories.

Few CB radios are fused for more than 3 amps (3000 milliamps) so your
power supply should be able to supply at least that much, although you
could probably get by with a 2 amp supply without much problem. The
supply should be regulated to prevent noise and/or damage to the
radio, so a wall-wart is not a good choice. A computer power supply
does have a regulated 12 volt output, but the problem here is that the
5 volt output uses a 'switching' regulator -- a type of supply that
requires a minimum load (usually about 10% of maximum) or it will burn
up -regardless- of the load on the 12 volt supply. It's also a good
idea to put capacitors across the outputs to reduce the RFI generated
by the switching power supply. Also remember that the 12 volt output
from the computer supply is a little shy of the 12.6 to 13.8 volt
requirement of the radio. In other words, after all the effort and
expense, the results are usually less than adequate. Your best bet is
to buy a power supply designed for your purpose.

Yeah, no kidding. If he shows up for the dream cruse he won't admit it, or won't tell anybody in advance with instructions where to find is chicken feather covered carcass. Heck he's too chicken to use his name on a news group post, why would anybody believe he would show his face? And if he did you wouldn't see it anyway because he would be to busy running away like a chicken; same as he did at Doug's place. All you would see his fat back side jiggling and he huffed and puffed running back to his cheap econ-o-box car he drives.

He's so stupid he can't figure out it's not me that he' replying to in the "Steveo" thread. Ignorance can be cured through education, but for Steveo, well stupidly he's stuck with that for life. He should just get drunk like usual. It was also funny the time he called me begging me to ask Doug to quit teasing him in the news group. Of course his problem is with whomever was doing it, and I still don't and don't really care anyway. Now he's ticked because I wouldn't come to his rescue. I still have his last call on the machine. I like to play it for some friends for grins and giggles.

Hi Gang,

I'm in need of some Walkie Talkie parts if ya have any laying around. One is an antenna (metal telescopic) for the TRC-218 2w 3 channel job, the other is the antenna (rubber duck with screw thread) for the TRC 207. I need the battery door for this as well, if ya have it. If ya have a scrap unit that choked electronically, I may be interested. Let me know.

Please remove "No Spam" when replying. I don't get to this group often, so it is best to reply direct.

I have some misc. CB stuff and parts floating around here too, to sell. If anyone is in need of anything, give me a yell, I'll let you know if I have it, and price.

Thanks,

Lou

I have $1000 that says Steveo or whatever his real name is will be
under police custody real soon. Anybody care to match it? Hey Leland,
when this nutbag does his assault and gets his ass hauled into jail
will you post the info here in the NG so I can collect?

In computer power supplies only the 5v output is regulated. The 12 volt out
put is unregulated which means that as you draw current the voltage drops.
It's pretty low to start with (13.8 volt is the recommended voltage for
mobile radios) at 12v and you'll find that if you transmit or wind up the
volume the voltage might well drop to 11volts and the rig will not work.

The DC plug adapters arn't going to give you enough current you'll need more
than 1amp = 1000milliamp on transmit It is likely that you have got the
polarity wrong on the 13 volt adapter is swapped over i.e. you are
connecting possitive (red) to negative (black) by mistake. This will blow
the fuse.

Suitable power supplies are available from Maplin and sold as "Regulated
13.8v Power Supplies" and come in a range of max currents from 2.5 amps to
30 amps. The 2.5 amps will do at a pinch. 5amp might last longer.

<snip>
What an emotional wreck you have become, Frank. You are unable to contain yourself in any exchange with myself. Your emotions are too strong and you have not managed how to exercise self control. The world understands the anger you direct towards those that educate you on matters relating to real world applications of radio, but your insistence on remaining ignorant is your right. Lelnad even tried to school you on what's right and you began insulting him when you finally managed to grasp that he was right and you were wrong.

>Since you have ironically chosen to defend

>Leland, I'll offer you the task of explaining

>Leland's opinion that the inductive reactance

>and effective resistance of a capacitor are

>'unnecessary complications'.

You can't even comprehend there IS no irony except to those who are emotionally screwed up, not unlike yourself, so there is no possible manner of you explaining that of which you can't comprehend.

-
You're an
emotional train wreck, Frank. Feeling threatened to the point you resort to insult directed to all who dare ever disagree with your self-limiting ignorance is your problem, not anyone elses. You have extremely low self-esteem. Your radio knowledge has been shown to be fluff.

>Insulting my intelligence doesn't push my

>buttons, Twist.

Insult is your impotence, Frank, no one elses.
In fact, you initiate such insultive behavior in all your juvenile posts when you disagree with someone. Most recently you insulted Lelnad for daring to correct your technical incompetence. He insulted you in no way whatsoever, but that didn;t stop your low self-esteem from hurling insults at him, concerning his education and radio knowledge JUST because you had a differing opinion on subject matter than he. You're a loser, Frank. And you know it.

> The archives are available on Google for

>anyone to read.

>If anyone is so bored as to sample posts

>by both of us over the years they would

>quickly realize the source of your animosity

>towards me.

No one has ever accused me of such except yourself. In fact, many have noted that you have anger problems and insult all those who disagree with you on any and all matters. Also, many have also noted you no longer have a choice in your obsession concerning myself, as you have no self-control and your mouth always engages prior to your brain.
Same pattern, you get your clock cleaned by someone who puts your radio knowledege to shame and you come apart like a quivering mass of jello.
Couple this with your sickness concerning the obsession of posting identities, off-topic rants, blaming others for your incompetent quoting skills, ignorance concerning the Wilson brand and Palomars, and as you said, those bored enough to read any of your incompetent scribble and attacks throughout the years realize who holds animosity. A perfect example is you insulting Lelnad instead of explaining yourself. Your emotions get the best of you and you always toss an insult to those that correct your ignorance. You are unable to separate your personal emotions from any discussion you engage and the outcome is always the same,,,a junior high level emotional response from one who never learned how to demonstrate self-control or proper commnicative skill. But you go on and continue to tell the world how I'm responsible for your ongoing incompetence because for the first time ever, you are partially correct concerning your blaming of me for your failures in life, as I do a fantastic job of illustrating your double talk and bullshit..its why you can't get past or over yourself.

>Maybe it's time you make another

>appointment with your imaginary shrink.

>Hmmmm...., he wouldn't be the same person

>that runs your imaginary military group, would

>he? Or is he one (or more) of your imaginary

>DX contacts, like maybe that "Emperor of a

>foreign country" or "American head of state in

>Sri Lanka"? LOL!!!

You can't even figure out who you are talking to the majority of the time. You have accused me of being no less that 13 different people (according to google you continue to invoke).

Couple this with your incompetence, lies you were caught in, and insult you toss to all who recognize your retardations in the radio world and it is of little wonder you always have a poor attitude and disposition. Have a good weekend, Frank, and try not to insult all those who have greater radio knowledge than yourself. You can't comprehend it, but when these people correct you in your radio ignorance, its not personal, so there is no need for you to begin insulting these folks educations and their personal lives. Such behavior says more about you than anyone else, but then again, that is something you can never comprehend.

2318. Modern Equivalents of RCI-2950/70

Newsgroup: rec.radio.cb
Date: 2004-08-12 23:08:48 UTC
From: Data Flux <df@no-spam.no-spam>
Message-ID: <4MSSc.19019$9Y6.7655@newsread1.news.pas.earthlink.net>
Source record: 185128

About a decade ago, I owned one of the original RCI-2970 radios that permitted TX/RX from 26.0 MHz to 32.0 MHz by moving J2 from P3-P4 to P1-P2, along with a "CB channel mode" -- complete with channels "3A", "7A", "11A", "15A", and 19A" -- by moving J1 from P1-P2 to P2-P3.

My understanding is that Ranger re-engineered its RCI-2950 and 2970 models several times, and that with each new version, modifications became more difficult. (I.e., the second generation lacked the "CB channel mode" and required shorting all of J2's pins to ground for continuous 26-32 MHz coverage; and that the third generation needed some kind of add-on module to obtain said coverage; and that alas, the fourth generation, for US retail, was totally unmodifiable.)

Here's my question. Are there any 10 meter ham rigs around today that can easily be modified for 26-ish to 32-ish MHz TX/RC coverage, AND that feature all the RCI-2970's important bells and whistles, such as:

- AM/FM TX PEP at least ~50-75 watts, SSB TX PEP at least ~100-150
- variable TX power knob (versus cheesy "high/medium/low" switches)
- AM/FM/LSB/USB modes on any frequency
- discrete tuning ability (i.e. 27.4150 MHz, 27.4151 MHz, etc.)
- roger beep (very useful for extreme DX on SSB)
- SWR display
- split frequency TX/RX
- direct frequency access for entire coverage range (i.e., I don't want something that behaves like a "slider" modification where you see one channel/frequency on the display but are actually somewhere else according to an add-on switch; I'd like to simply be able to tune to 27.4150 MHz, and actually be there)
- finally, I'd prefer a mobile rig versus a base

Anything like this still exist, under $500 new?

Thanks in advance, folks!

I am looking to buy an amplifier 25-30mhz coverage with reasonable power output ~100-150W. Price range <100 preferred, 150 max. Preamp preferred. After doing some research, Cobra and Palomar (blackface) seem to be suitable, but I'm pretty open to anything of decent quality because I'm a novice for this TX nonsense; I'm a scanner guy.. please don't hold it against me :)

If anyone has something for sale, or a recommendation, please by all means e-mail me jmeouchy@vt.edu.

Thanks very much,
Jad

If you looked at the spectral output of a 2970, you wouldn't be so
quick to want another one.

You are MUCH better off looking for a used HF ham rig for that $500,
and you'll be far happier, than using a hacked up CB design.

Thanks M-Tech. I thought I was gonna have to get some extra watts to be heard. :-)

I did that search before and found no one else claiming to sell it. I guess I'm outta luck.

Thanks a bunch.

Dr.X (at the sand pile, happily sitting in the evacuation zone)

Sorry if you answered this already, X. What's wrong with getting
it from Bills?

Hope you're ok with that storm..looks like they've upgraded it.

Probably, but how much of your signal do you want to waste, heating up the coax?
With some types, it wouldn't be a surprise to see 3/4 of your power lost between the rig and the antenna.. Andrews LMR-400 is good, as is all large hardline. N connectors are much better than the old "UHF" connectors (so named when 30 MHz was "Ultra-high frequency")

You installing yourself? Or is Bill doing that install as well? Keep me posted. I'm picking up a virgin 2510 tomorrow that I'm considering have the same swap.

Thought I read they had an adapter that fit into the original socket and converted it over to the pin-out of the chipswitch? So you could go back and forth(if needed). That way, no soldering/desoldering is necessary.

Keep me posted:-)

Yes, I'm installing it myself.

> posted. I'm picking up a virgin 2510 tomorrow that I'm considering have
the
> same swap.

From what I understand, the chipswitch is the way to go with the 2510 too, even if you are able to mod the radio without it. I have my 2600 in 11m now with just a xtal swap (22Mhz to 20) but I do want all the features the chipswitch has to offer.

> Thought I read they had an adapter that fit into the original socket and
> converted it over to the pin-out of the chipswitch?

My 2600 does not have a socket. The cpu is soldered directly to the board. I intend to remove it and replace it with a socket.

So you could go back
> and forth(if needed). That way, no soldering/desoldering is necessary.

I don't see an advantage to being able to switch between the chips at will since the new chip is able to do everything the old one can do, but I could be wrong. As for the no soldering/desoldering, how can you be absolutly sure to have a connection to all 62 pins? I'll look around for more info and pass it along if I find any. I would be interested to know how it's done. I remember adding memory to a computer back in the old comdor 64 days by ganging chips on top of the original chips to double the ram. Bent one pin up (chip select pin) on each chip and ran a line between them all plus a couple of diods. Worked great. Perhaps what you're talking about is something similar.

> Keep me posted:-)

I was listening to the national hurricane watch centers amateur radio
net.... sounds like Ft Meyers got hammered, and orlando was next last I
heard.... I am just now getting settled down from packing luggage, and
making all final plans and arrangements for my time away.

Isn't that what I just asked for? Another HF ham rig? The RCI-2970 was technically sold as a ham radio. I'm trying to find another 10 meter ham rig, with the aforementioned features, that can be modified easily to cover at least 26.0-29.6999 TX/RX.

Okay, now I see. You can solder it directly to the board :-)

For some reason, I thought you had to use a socket.

Bummer, my inlaws have a condo in Ft Meyers but they're up here
taking care of my brother inlaw who is almost dead from cancer.
That's all they need is something else to worry about right
now.

I hope everyone is ok down there, buildings can be replaced.

> I am wanting to use it on a 476 MHz set putting out 5 watts only

Well, not knowing exactly what you have, I'd say look on the side of the coax, and find the loss figures online. If it's low cost stuff that was "ok" for 30 MHz, it's likely lossy as hell at half a GHz.

I use LMR-400 for that sort of thing, which is not lossless, but it's pretty darned good.

The connectors themselves won't be horrible, but I wouldn't put PL-259's and similar on LMR-400. That would be a waste of good cable. You really want N connectors up here.

Yeah, that link shows the socket. But you remove the old chip, and in it's place you put the socket and plug the new chip into it. This also means that if you find that you need to put back the old chip, you can just unplug the chipswitch and plug in the old one without having to do any soldering.

Putting in the socket does require you to desolder the old chip and solder in the new socket though.

-Dr.X

PS: previous message said 62 pin socket...I meant to say 64.

You don't have to, but it's the smart thing to do. One advantage is the ability to revert back to the old chip. Another is that you do not have to apply heat to the new chip to install it 'cuz you applied the heat to the socket instead.

If the line is short, the type won't make much difference unless it's
RG-174 (really thin stuff). E.g, for a length of 18' @ 500 MHz I got
the following loss figures:

1/2" HL -- 0.3 dB
RG-17 -- 0.3
9913 -- 0.5
RG-8 -- 0.9
RG-58 -- 1.5
RG-174 -- 4.9

> N connectors are much better than the old "UHF" connectors (so
>named when 30 MHz was "Ultra-high frequency")

I don't know where you get your information but it's wrong. UHF
connectors work fine for UHF. And to the best of my knowledge, the
current limits of the UHF spectrum (300 MHz to 3 GHz) were defined
long before the connectors ever existed.

I've seen quite a spread for RG-8, and that's just from reputable
manufacturers, not including "no name" cable.
Try the calculator here: http://www.ocarc.ca/coax.htm 100' of 8237 at 4.5dB
loss (over half your signal gone, in both directions btw, or 9913, which is
not bad stuff, at 2.85dB, nearly half your signal gone.. Or 9258 at (gag)
8.28dB loss, and Tandy at 8.03dB! LMR-400 at 2.69

> RG-58 -- 1.5

By "uhf" I'm assuming he means PL-259/SO239 sorts of connectors, which are lossy at UHF.
"works" is a pretty sloppy definition. Lots of junk "works".
Works well, is a different story.

Here's one fairly authorative source:
http://www.qsl.net/vk3jeg/pl259tst.html
The charts are somewhat slow to load, but worth it.
Insertion loss of about 1dB, compared to "almost immesurable" for an N connector.

So let's take my reccomendation, LMR-400 with Ns, 100' at <3dB loss vs middle of the road RG-8 (not the worst junk) and PL-259s at 6.5dB. So with 1W up the pipe, I get about half a watt to the antenna, you suggest that <1/4 W is ok?

Here's VK3JEG's summary:
I would like to finish with these few points. The first being that the so named UHF connector from the past is not really suitable for use above 300 MHz at all. Perhaps the exception to this would be when a cheap and rugged system is required where loss and good signal to noise ratio is of little concern. Unfortunately it appears that both Amateur and CB Radio UHF type equipment fall into this category as many manufactures still supply SO-239 UHF receptors as standard equipment. (DVH: I know MANY hams that would take exception to that!) The second point is that from our results we can see that utilisation of the UHF connector at 146 MHz for FM type transceivers is not such a problem. A cheap rugged connector is probably an advantage as many FM units are used for mobile applications. However, for 144 MHz SSB type work where low loss and good signal to noise ratio is very desirable, again I would not recommend the use of UHF type connectors. The UHF connector still has a place in many applications where a robust economical RF connector is required but for serious applications its use should be limited to below 100 Mhz. As we have shown the N type is far superior in performance, it should also be noted the BNC type connector is similar in performance to that of the N type but has the disadvantage of being less rugged. In the end, one should always check with the manufactures specifications.

Ah. THAT'S where I got the "replace the old chip" from. I see now. I thought the radio's came with a socket but it was the wrong one(for the chipswitch).

Well, it looks like I'll be going this route too. I pick mine(hr2510) up today. I'm going to clean it up and check it out first and then have the chipswitch installed later.

Many nice clear pics.
All items are real inexpensive.
No Junk here folks, all exactly as described.
This is my entire list on Ebay.
You may want to check others while you're there :-)

I didn't so that, I used one of 110' + cedar trees in the
front yard.

>Works well, is a different story.
>
>Here's one fairly authorative source:
>http://www.qsl.net/vk3jeg/pl259tst.html
>The charts are somewhat slow to load, but worth it.

I read the page, but it doesn't jibe with my experience. The best
example I can provide comes from servicing several dozen television
translaters over the years, ranging in frequency from 50 MHz to over
800 MHz, and most of which used the PL-259/SO-239 connectors. In fact,
I have several in the shop right now that I rescued after they were
replaced due to the recent FCC-forced conversion. But in all those
years I have never seen connector losses that come close to what he
has described (1.0 dB @ 432 MHz). Maybe tomorrow evening I'll fire up
the Adler and measure the actual losses of the connectors, but I
highly doubt it will even be measurable.

>Insertion loss of about 1dB, compared to "almost immesurable" for an N
>connector.
>
>So let's take my reccomendation, LMR-400 with Ns, 100' at <3dB loss vs
>middle of the road RG-8 (not the worst junk) and PL-259s at 6.5dB. So with
>1W up the pipe, I get about half a watt to the antenna, you suggest that
><1/4 W is ok?

I made no such suggestion, and you are assuming that the OP is using
100' when all he said was "my old coax". Again, I said, "If the line
is short...."

>Here's VK3JEG's summary:
>I would like to finish with these few points. The first being that the so
>named UHF connector from the past is not really suitable for use above 300

>rugged. In the end, one should always check with the manufactures
>specifications.

I never suggested that the N-type connector -wasn't- better. I will
agree that they are better. But I said that the UHF connectors work
fine, and for the OP's intended use they will probably work just as
well as an N-type connector. This discussion reminds me of some OC
audiophiles that think their 10-watt triode amps sound better with
gold-plated capacitor screws and #2 oxygen-free speaker wires. Nobody
is saying that such components aren't better, but at some point you
need to heed the law of diminishing returns.

Hi all,
Just a note of info..
Bills 2 Way is the current owner of the Chipswitch Technology.
If you are looking for a chipswitch and socket, there are many places on the 'net that sell them, But Bill's is the supplier.

Bill's website also has a link page of authorized installers of the chipswitch.

Rogerbird (ME) is one of those Authorized installers.
I do not sell just the Chipswitches. I don't keep a large qty on hand, but I have Chipswitches and sockets for installs. I will install a Chipswitch and socket for $85 plus return shipping.
With the Chipswitch install I also install my 24Mhz enhancement to allow operation from 24.800 to 29.999MHz. See my website for more info and other mods available for the HR series radios.
http://Rogerbird.tripod.com

I can be contacted by email at Rogerbird1<NO SPAM>@netscape.net

Roger

2388. Amateur Radio Newsline™ Report 1409 August 13, 2004

Newsgroup: rec.radio.cb
Date: 2004-08-14 22:24:29 UTC
From: radionews@aol.com
Message-ID: <20040814182429.10744.00002140@mb-m25.aol.com>
Source record: 185248

Amateur Radio Newsline™ Report 1409 August 13, 2004

Note: Ladies and gentlemen This weeks newscast is dedicated to the memory of the late Roy Neal, K6DUE who passed away a year ago on August 15, 2003, following heart surgery. Roy was our friend, teacher and served as the first elected vice-president of Amateur Radio Newsline after it became a 501(c)(3) nor-for-profit corportation. We miss him very much. "So Roy old buddy: This one is for you."

de WA6ITF

Amateur Radio Newsline report number 1409 with a release date of Friday, August 13th, 2004 to follow in 5-4-3-2-1.

The following is a QST. Australian hams ask for a new ham band at 500 kilohertz, lots of news world wide on the B-P-L front, and the FCC talks about license processing. Find out the details on Amateur Radio Newsline report number 1409 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: AUSTRALIA TO SEEK NEW 500 KHZ HAM BAND

The old 500 kHz the international maritime distress frequency could become part of a new ham band down-under. This if the Wireless Institute of Australia has its way. W-I-A News anchor Graham Kemp, VK4BB, joins us from Brisbane with the details:

--

The WIA will shortly be writing to the ACA to request the establishment of an experimental amateur allocation at 500 kHz. Thats the 600 meter band.

WIA Director Glenn Dunstan VK4DU said "500 kHz was the international maritime Morse code distress frequency for most of the 20th century."

"It was the frequency used by the RMS Titanic to send her plaintive cries for help that April night in 1912. It was the frequency used by thousands of merchant ships to signal their plight in times of peace

and war."

"More often than not, 500 kHz was witness to a ship's Radio Officer's last moments. Many Radio Officers literally died at the key as their ship fell victim to enemy action or was overwhelmed by the forces of nature".

Glenn, himself an ex ship's Radio Officer, said. 500 kHz was replaced in 1999 by the Global Maritime Distress and Safety System (GMDSS), which uses a combination of automated terrestrial and satellite communications.

"Since the introduction of the GMDSS in 1999, 500 kHz use has declined rapidly. The last official users of the frequency, China, plan to discontinue operation in 2005. The frequency is no longer used in Australia, New Zealand, the Pacific or the US."

500 kHz has been instrumental in saving tens of thousands of lives in the last 100-odd years. It is thus fitting that the frequency be preserved as a 'spectrum national park' to commemorate those who paid the supreme sacrifice in its use.

"The best way to do this is to establish a small slice of spectrum around 500 kHz - probably 495 to 510 kHz - as an amateur radio band. The band would also provide a unique opportunity for experimentation with antennas, propagation, advanced narrow band modulation techniques and receiver digital signal processing." Glenn said.

--

It should be noted that 500 kHz is still allocated to the maritime service so any permanent amateur access in Australia or elsewhere is some way off. It is worthy of note that the I-A-R-U Region 1 and various United States Amateur long wave groups are actively pursuing an experimental allocation at 500 kHz as well. (WIA News)

**

HAM RADIO IN SPACE: ECHO ON THE AIR

AMSAT has announced that the F-M voice repeater on the Oscar-51 Echo satellite is on for a trial period. The transponder was turned on the 30th July for about three weeks during which command stations will be watching the power budget and adjusting the transmitter power for good management of the battery.

For those wanting to give Echo a try, its uplink is on 145.920 MHz F-M, with 67 Hz CTCSS tone. The downlink is on 435.300 MHz.

A reminder that this is a trial of the F-M voice repeater only. Please do not send any data through it. AMSAT says that the digital portion of Echo is not yet ready for use. (ANS)

**

THE BPL FIGHT: ZS AMATEURS SHOULD REPORT BPL TESTING TO THE SARL

Turning to news on the B-P-L front, South Africa AMSAT President Hans van de Groenendaal, ZS6AKV, has now spoken out. He is urging amateurs and short-wave listeners in that nation to report any unusual but consistent interference to the South African Radio League. This as the rollout of Broadband over Powerline continues in that country.

ZS6AKV says that South African hams must continue to be vigilant about any B-P-L testing taking place in their neighborhoods. Hans says that following Pretoria's example several other metropolitan areas have shown an interest and may soon be starting trials. (SARL)

**

THE BPL FIGHT: FOLLOW-UP ON SAN DIEGO GAS AND ELECTRIC

Back here in the USA, San Diego Gas & Electric has confirmed that it is considering entering the Broadband Over Powerline business, but for now that's about all the utility will say.

As reported last week, San Diego Gas & Electric planners are reported to be seriously considering endorsing and sponsoring Broadband Over Powerline data transmissions on the company's power distribution system. The story went on to state that San Diego Gas & Electric is also considering entertaining proposals to partner with vendors for one or more field demonstrations of BPL. This, this despite being advised that B-P-L will cause considerable interference.

Bob Gonsett, W6VR, whose CGC Communicator newsletter was first to break the story put in a call to the utility to try and get a bit more information. San Diego Gas & Electric response was brief and far from insightful. All that the utility would tell Bob is -- and we quote: "Like many utilities, San Diego Gas & Electric is assessing B-P-L technologies."

W6VR says that while we are all temporarily left in the dark as to San Diego Gas & Electric plans, those plans will eventually surface. As soon as they do, we will let you know. (CGC)

**

THE BPL FIGHT: NORTH CAROLINA UTILITY ENDING BPL FIELD TRIAL

Meantime, North Carolina's Progress Energy Corporation says it's completed Phase II of its B-P-L field trial in the Raleigh, and will be closing down the experiment. In an August 4th internal memorandum reported by the ARRL Letter, the company said its program to test the viability of providing broadband service to communities it serves will wrap up by the end of August. The company reportedly will shut down the system once it's able to move its BPL customers to other broadband providers. Progress Energy's decision comes on the heels of announced shutdowns of B-P-L field trials in Penn Yan, New York, and Cedar Rapids, Iowa. (ARRL)

**

RADIO LAW: HAM RADIO EXEMPT FROM CONTROVERSIAL SAN DIEGO WIRELESS SITING ORDINANCE

Wireless communication antennas would be allowed in San Diego, California's residential areas only as a last resort under a new policy recently approved by the City Council. By a vote of 7 to 1, the council has approved a new policy governing the design and placement of wireless antennas, making it more difficult for cellular carriers and others to erect towers in or near residential areas.

Under the new regulations, the process will differ according to location. Some approvals would be made at the staff level, while others would require an okay from a planning group, a hearing officer or the full Planning Commission.

In the past 20 years San Diego has processed over 1,400 applications for cellular telephone towers but the the city has not tracked how many were actually built but there is some good news for hams on this one. ARRL Southwestern Division Vice Director Tuck Miller, NZ6T, reports that amateur radio is specifically exempted from the terms of this new ordinance

More about the ordinance itself is on-line at http://www.signonsandiego.com/uniontrib/20040728/news_1m28wireless.html (CGC with further information from NZ6T)

**

RESCUE RADIO: COMMISSION SEEKS COMMENTS ON RULE CHANGES FOR EAS

The FCC has issued a Notice of Proposed Rulemaking concerning possible revisions to the Emergency Alert System or E-A-S system. The agency is seeking comment on how E-A-S can become a more effective tool for warning the American public of an emergency. It is also a chance for radio amateurs to suggest new ways that the E-A-S might be interfaced with our hobby to better serve the public in time of need. More information is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-250534A1.doc (CGC)

**

WITH THE FCC: MANAGING THE DATA PROCESSING OF LICENSES

The FCC has a lot to say about the Universal Licensing System and some of the problems it faces in administering it. Especially those dealing with paper filings from the ham radio community.

Donna Scott, a Program Analyst with the Wireless Telecommunications Bureau in Gettysburg, Pennsylvania. And in a recent interview with Rain, he outlined just one of the most common situations that her office runs into. This one dealing with applicants who faili to provide their FCC Identification Number better known as an F-R-N:

--

Scott: "I believe that one of the biggest problems that we encounter are paper filings coming here to Gettysburg with no F-R-N on the application. The F-R-N is mandatory. This is the registration number that you obtain through the CORES database and without that number wee really can't accept that application. And we do have a high volume of paper applications that still come in without that number."

--

Probably the second highest volume of amateur applications that need to be returned are those from hams who do not read what's right in front of them. These are hams who insist on sending form 605 V-E-C to the agency. This even though the form 605 V-E-C is only for use by those who give the tests and not for the ham in the street filing paperwork with the agency:

--

Scott: "It clearly states that it is a 605 VEC form. It says do not send to the FCC on the top and on the bottom. Yet amateurs continue to send them here to Gettysburg and we cannot accept them."

--

According to Scott, the only version of Form 605 the FCC will accept from the ham community is the one that contains the approval statement from the governments Office of Management and Budget and that carries a current issue date.

This is only a fraction of the information that Donna Scott described about managing the nuts and bolts of the FCC's licensing system. There's lots more with her on this weeks RAIN Report. Its on line right now at www.rainreport.com or on the phone at 847-827-7246. (RAIN)

**

ENFORCEMENT: ELECTRIC UTILITY WARNED AGAIN ABOUT INTERFERENCE TO HAM RADIO

A Tennessee power company has been told that its response to an earlier RFI complaint is inadequate. The FCC's Daryl Duckworth,

NN0W, explains:

--

Audio report only. Download the MP3 newscast audio file at
www.arnewsline.org

--

The FCC told the utility that the it knows of no powerline noise problem associated in any way with guy wires. (FCC, RAIN)

**

ENFORCEMENT: $3000 FINE FOR UNLICENSED OPERATION

The FCC has issued Donald Donovan Jackson of St. Petersburg, Florida a monetary forfeiture in the amount of $3,000. This, for operating an FM broadcast station on the frequency 102.1 MHz without Commission authorization.

On November 23, 2002, agents from the Tampa Office observed a broadcast station operating on the frequency 102.1 MHz. A search of Commission records revealed no FM radio station licensed to operate on 102.1 MHz in that area. The agents then used direction-finding techniques and determined that the broadcasts originated from a commercial office building located in St. Petersburg. Field strength measurements taken near the sight of the broadcast indicated that the signal strength exceeded the permissible limits for a non-licensed station.

The agents interviewed the owner of the building who provided them with a copy of the lease for suite. He also informed them that a person named Donald Donovan Jackson operated the radio station from the premisis.

On January 15, 2003, agents from the Tampa Office interviewed Jackson and conducted an inspection of the station after again observing a radio station operating on 102.1 MHz. During the interview, Jackson admitted to leasing the property and operating the radio station from that location. He was given the usual 30 days to pay the fine or to file an appeal. (FCC)

**

RADIO LAW: DOJ WANTS MANDATED DIGITAL WIRETAP ABILITY

The Department of Justice says that technology companies should be mandated to ensure that law enforcement agencies can install taps on Internet traffic and new generations of digital communications devices. This as the D-O-J and other agencies press for a digital expansion to the Communications Assistance for Law Enforcement Act.

The Communications Assistance for Law Enforcement Act is a 1994 law that requires the telecommunications industry to build into its

products tools that U.S. investigators can use to eavesdrop on conversations with a court order. The investigatory agencys are worried that federal agents would not be able to install court ordered wiretaps against criminals who communicate using the latest digitally encrypted technologies. Lawyers for the Justice Department, FBI and Drug Enforcement Administration say that this need requires immediate attention and resolution by the Federal Communications Commission. (Published news reports)

**

RESCUE RADIO: HAM RADIO AT THE DEMOCRATIC CONVENTION

Eastern Massachusetts ARES was activated to support Public Service Agencies during the Democratic National Convention which concluded Friday, July 30th. The ARRL reports the Salvation Army, that the American Red Cross, and the Massachusetts Emergency Management Agency all helped out. ARES was ready to provide any needed support in case of catastrophic loss of the communication infrastructure that had been installed for the event. (ARRL)

**

RADIO IN SERVICE: FITTEST SEEKING ASSISTANCE

Those involved with Rescue Radio may find some appeal in this. The United Nations World Food Program's FITTEST operation is currently seeking Telecommunications Specialists for 3 to 6 month contracts.

FITTEST stands for the Fast Internet and Telecoms Emergency Support Team and it offers constant travel, constant pressure, constant challenges in a job that still allows you to combine a family life and a professional life in a two or three months on one month off duty regime.

Typically, FITTEST hires people with non-conventional career paths to provide emergency deployment of VHF and HF networks, Satellite and Telephone systems. They are looking only at people with direct hands-on experience willing to work under harsh circumstances.

To get an idea of the work they do in Iraq and Afghanistan have a look at their web sites. They are in cyberspace at http://www.hiciraq.org/mediacentre/gallery/FITTEST/ http://www.qsl.net/ya5t. Applications to mark.tell@wfp.org and martin.kristensson@wfp.org (WIA News)

ON THE WEB: BIG CHANGES AT THE QRZ.COM WEBSITE

Some major changes are taking place at the very popular QRZ.com ham radio website. We have more in this report:

--

Fred Lloyd, AA7BQ, who runs the QRZ.com website has announced major changes in access to posting access site. This, for registered users whose login user name is not the same as their ham radio callsign.

Basically, Lloyd says that only contributors who have legitimate ham radio calls will be permitted to post material to most areas of the website. To accomplish this Llloyd says that he has created two levels of membership. One called Ham is for those who want to use their call sign as registration login. The other will be the Guest member for those who may not have a call or who simply prefer not to use it.

Those who have a call and use it for login purposes will have full read and write access to all public Q-R-Z forums, plus the ability to make changes and/or additions to listings in the callsign database. Guest level members will be limited to posting on the sites Help Forum, the For Sale Forums, and the Questions and Answers Forum. These people will have no access to callsign database editing functions.

QRZ.com has also instituted several rules to help keep order and decorum at the site to make it enjoyable for the majority of those signing on. Among these are the right to terminate the current and future membership status of any user who engages in the harassment of any other user, staff member, or volunteer of this system or the use of any information derived from the website that contributes in any way to unsolicited e-mail of any kind. Also banned is the posting of obscene or offensive material on the site and QRZ managers say that they reserve the sole right to determine what is either offensive or obscene.

Lloyd says that the site will shortly begin converting current members to the new system. If you are currently signed up using your call sign as your logon I-D you need do nothing. For those who are not, QRZ we will be assigning new login names to those current members who are apparently licensed amateurs. The new logon name will be the same as the callsign that is listed in the QRZ call sign database as the 'Primary Callsign' for that account. Each user who is subjected to a name change will be notified via e-mail at the address we have on file for that user. Names that cannot be

associated with a callsign will be assigned to the Guest level of membership.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Lots more about the changes are on the QRZ.com website under the title QRZ System Announcement. Lloyd and the managers at QRZ say that they hope that these hanges will improve the website for everybody. (QRZ.com)

**

HELPING HAND: THE AUDIO NETWORK

The U-K Audio Network is a website for the blind using audio web pages, controlled by standard keyboard navigation. It is the first site in the world that needs no adaptive technology to be accessible by blind and partially sighted users.

There are many resources on the Audio Network. For example, it is the only place on the Internet where you can listen to BBC Radio schedules for the forthcoming week in audio. And speaking of radio, there is a whole section of radio stations where you can change channels at the touch of a button, without having to worry about annoying pop ups or filling out a registrations.

Best of all this website is free. Its located in cyberspace at http://www.yrguk.com (RSGB)

**

THE SOCIAL SCENE: DENVER IN AUGUST

Turning to the ham radio social scene, the Denver Radio Club Hamfest is scheduled for Sunday, August 22nd at the Jefferson County Fairgrounds in Golden. Doors open at 8:30 AM with door prizes awarded throughout the fest. For more information contact Bryan Steinberg by e-mail to kc0cua@arrl.net or visit the clubs website at www.qsl.net/q0tx (KCØCUA)

**

THE SOCIAL SCENE: CFMC IN ILLINOIS IN SEPTEMBER

And the Chicago F-M Club will hold its annual Hamfest and Flea Market on the weekend of September 18th and 19th. The venue is the Lake County Fairgrounds in the city of Grasyslake, Illinois. More information is on-line at wwwchicagofmclub.org. (E-mail)

**

HAM RADIO IN SPACE: ARISS AT HAM FAIR JAPAN

Amateur Radio on the International Space Station will be represented at the upcoming Ham Fair 2004 on Saturday and Sunday, August 21st and 22nd in Tokyo, Japan. The ARISS U.S. team provided photographs of the radio equipment in the Service Module to J-J-one-L-Y-U. He will display some of them along with a modified Kenwood D 700 E transceiver which looks like the flight radio. Other photos will be used in a slide show as part of an exhibit in the Kenwood Booth. Ham Fair is sponsored by the Japan Amateur Radio League with about 28,000 people is expected at the event. (ARISS)

**

SPACE: NASA APPROVES NEW DESIGN FOR SHUTTLE EXTERNAL TANK FITTING

NASA is moving ahead with plans to redesign a part of the Space Shuttle external fuel tank that investigators believe played a critical role in the Space Shuttle Columbia accident.

The Space Shuttle program will soon begin installing an improved bipod fitting that connects the external fuel tank to the Shuttle during launch. Investigators believe that during Columbia's launch in
January 2003, insulating foam from the bipod area fell off the external tank and damaged the left wing of the Space Shuttle. (NASA)

**

WORLDBEAT - BELGIUM: GALILEO GPS SYSTEM APPROVED BY EU

Officials in Brussels, Belgium say the satellite navigation system the European Union is planning will not clash with one already in operation by the United States. This, as an agreement signed in that European nation will make sure that the proposed Galileo system will be compatible with the U-S owned Global Positioning System.

Galileo is slated to begin operation 2008. Together the two systems are expected to become a single world standard for positioning and radio navigation. (ANS)

**

DX

In D-X, keep an ear open for GB6LOG. This is a special events station on the air through August 18th to celebrate the 60th anniversary of the Liberation of Guam during World War 2. The station will operate on all modes. QSL via the RSARS QSL Bureau to receive the special QSL from this station. For further information contact G0SWY by e-mail to G0SWY@aol.com (GB2RS)

And hams on Gibraltar have been granted permission to use the special prefix ZB300 during the month of August. This to celebrate the colony's three hundred years of British sovereignty. If you work ZB300, QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: SIGHTLESS UK NEWSREADER TAKES TO THE AIR

And finally this week the story of a U-K ham who has overcome physical disability to become a news anchor for the Radio Society of Great Britains GB2RS News. Jeramy Boot, G4NJH, in Nottingham has the rest of the story:

--

Now news about a new GB2RS newsreader. Annick Morris, M0HDE, of Wigan, Lancashire, became a GB2RS newsreader two when she read the news through the GB3MR repeater. What makes this special is that 18-year old Annick has been blind from birth.

She has a specially-adapted laptop computer which accepts Word files, and which has a single-line display consisting of raiseable dots which form characters in Braille. Annick can read Braille fast enough to read out loud from this, although she can only 'see' one character at a time.

In the future Annick will be newsreading on 6 metres, 2 meters and 70 centimetres and it is hoped that she may also transmit on two bands at once.

Jeramy Boot, G4NJH.

--

This is not the volunteer first job that M0HDE has been successful in. At age 14 Annick attended the "Child of Achievement Awards" in central London after impressing organizers with her determination to overcome obstacles presented by her disability. This award recognizes the efforts of young people under the age of 16 who make special efforts to overcome personal disability or illness while also managing to help others. We at Amateur Radio Newsline welcome Annick Morris, M0HDE, to the worlds ever growing ham radio news reporting teams.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

And this note. Because our staff will be in Huntsville to present the Young Ham of ther Year Award there will be no update on the 661-

296-2407 line on Friday, August 20th. Phone users are asked to utilize another of the automated phone lines operating in other regions. Our 661-2407 line will update to the latest newscast on Monday, August 23rd.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Damron, N8TMW, and I'm Jeff Clark, K8JAC, saying 73 and we thank you for listening. Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

Frank I agree with your comments about "losses" in the UHF style of
connectors. The problem is the impedance bump they cause. And this varies
depending on the dielectric used. If nothing else they should use Teflon
dielectric. If you look at some of the really "cheap" ones they use some
kind of penolic that really increases the impedance bump. Also if you look
at the high quality V/UHF antenna mounts and SWR-Power Meters, that use the
female UHF connector, you will notice the center pin is held in place by
several vanes between the ID of the outer shell to the OD of the center pin.
This is NOT a cost saving measure. If you calculate the impedance of that
connector assuming the dielectric is mostly air it works out to between 40
to 50 ohms minimizing the impedance bump. When you go to a manufacture's
site to get the data sheet for a high quality V/UHF connector they state
they are not "constant impedance".

Chris, if you have a stock radio, say between 4-10 watts of output, i'd
say you may see a MAX of 5-7 amps.
If you insist on using the cigarette/power plug get good plug in with a 10 amp
fuse.This wont blow unless
you have a serious problem. You can get them at any Radio Schack or truck stop.
Otherwise, run a fused line to your terminal/fuse block, tap a fuse holder and
be done with it. I go to the battery.
Good luck, 333

>Frank I agree with your comments about "losses" in the UHF style of
>connectors. The problem is the impedance bump......

Leland,

Measure it. If you actually find this impedance "bump", maybe you can
explain why impedance is so significant for these connectors while
impedance will "unnecessarily complicate things" for mag-mounts. Are
you saying that impedance is important for connectors but not for
antenna grounds? Why not fall back to your "pure capacitance" excuse
where UHF connectors are concerned?

Make up your mind, Leland. What's important -- impedance or 'pure
capacitance'?

[top posting on purpose]

M-Tech, If you want it installed for you, I think Rogerbird is the way to go. I would do it for you but it would take too long for me to get around to it. Also, he has the chip on hand so he will not be faced with waiting until the supplier sends to him as I would. I can't say anything about his work since I have never seen anything done by him but I can tell you this; I've a component level tech for about 20 years and can tell right away when some one is talkin' out their @$$. After reading his site, I believe he is _very_ capable of doing the job correctly. The price seems great to me (I would charge a little more). If you are not experienced enough to de-solder the old chip without damaging your radio, you should hire Rogerbird1 to do it for you. Looks like a bargain to me considering if you damage your rig, you may end up paying a lot more for the repairs.

jmho.
Good Luck,
-Dr.X

1. You can see my review of the CBS1000 on my website:
http://www.cbgazette.com/reviews.html
2. If you're willing to spend the money for a 2547, then buy a used ham rig.
It's illegal to use a Ham rig on CB freq's but you'll find a used one is
much better quality, and odd's are you'd make mod's on the 2547 that would
make it just as illegal.
Suggestions:
Icom IC-725 (used prices $200-$325)
Yaesu FT-101 "The Brick" (used prices $150-$300)
Kenwood TS-430S (about $300)
Yaesu FT-757 (about $300)
or a used CB Base like:
Cobra 2000
Cobra 139 (40ch version)
Cobra 135 (40ch version)
Realistic TRC-457
Stalker XX
Teaberry Stalker 202
Stoner Pro40
i.e. - just about anything made from 78-85

Personally, I use a CB for CB Frequencies. My No.1 Son is the Stoner Pro-40
(no AM, only SSB). My backup's are: TRC-457 and a Stalker XX)

Has anyone else done this mod? I think I'm having ... "issues".
The mode switch now has a fourth mode that does not identify itself in the display and does not transmit but receives (sounds a little muffled).
Also, when power is lost, it always restarts in this phantom mode.
Could this be where the exports would put fm? I see no fm capabilities in the main board so it's not something I can take advantage of unless there's another mod I can do to it.

TIA,
-Dr.X

Sorry Jim, my point was that I used one of my four 110' tree's in the
front
yard to mount my antenna. I couldn't put up a tower on this house. At my
other
house I had a 40' extend-a-mast, worked perfect, but when we moved to this
hose & neighborhood, I didn't want a mast or tower.
As Mopar said, did you get the pad poured? When's the antenna raising

party?

The Pro520xl should draw more than 3 amps. I can't guarantee that I have one, but I'll look to see if I have a 2.5-3am PS somewhere in the dark recesses of my fortress of solitude. IF I do, I'll let ya know, and if you send money for shipping you can have it for free. I'll look around Monday - no promises (I may have thrown it out, or sold it at a long ago hamfest). Woody.

Defendant, DOUGLAS
ADAIR present in court.
Defendant having admitted to a probation violation, and
having waived oral hearing, defendant is found in violation
of probation.
Defendant having been convicted of the offense of Nonsupport
of Dependents, in violation of Revised Code Section
2919.21(A)(2), a felony of the 4TH degree.
Probation as ordered by this Court on April 11, 1997 is
ordered continued with the following added conditions: 1)
Seek and maintain gainful employment; 2) Defendant to seek
mental health counseling; 3) Execute wage withholding
agreement.
Defendant ordered to pay the costs of prosecution including
any fees associated with the appointment of counsel. It is
further ordered that the defendant pay any supervision fees
associated with being granted probation. Payment of
financial obligations shall be prioritized as restitution,
supervision fees, court costs, fines, and assigned counsel
fees.
JUDGE JAMES D. JENSEN
PARTY : D1 - ADAIR DOUGLAS W

>meter ham rig, with the aforementioned features, that can be modified
>easily to cover at least 26.0-29.6999 TX/RX.

No, what you asked for is another out of band modifiable radio that is a thinly disguised CB radio marketed to CBers as an "amateur" radio. You want something like Copper sells, not the kinds of radios that AES, HRO, or any of the other amateur radio dealers sell. The difference in quality is a dead give away too. The RCI29XX radios have managed an uncomfortable crossover, but are still considered extended range CB radios by any serious radio enthusiast.

As an aside, a lot of radios are labeled as "amateur" radios because they are sold as (wink, wink) 10 meter radios. Hams wouldn't and don't buy these radios, CBers do, and modify them (hell, most retailers sell an option to have the radio modified for you by them) for extended operation. Most so called 10 meter radios are sold as AM/FM only when you'd be hard pressed to find a ham today that would use AM. Where is the popular CW mode that no respectful amateur radio would be without? That and these are "channeled" radios and not equipped with VFO tuning. 10KHz stepping is just ludicrous when trying to use SSB. 10 KHz steps severely limit the usefulness of the radio when you can not talk to someone using a VFO. FM is such a spectrum hog, that it is only used in the uppermost portion of the 10 meter band, and usually for repeater use. SSB, specifically USB, is the mode of choice on 10 meters. And finally, you would be hard pressed to find a ham dealer that sells these radios. You find them at places like Copper that sell exclusively to CBers who are entrenched in their inefficient, archaic AM mode, when clearly, SSB is a far superior mode that delivers the most bang for the buck, and the greatest range.

I'm considering that very thing:-) I might also have him check out this (gotta get it yet) 2510 and tune it up a tad.....I'll be emailing him shortly.

I would NEVER consider doing it myself. I'm more than capable of desoldering/soldering. However, I'd be more concerned with tuning AFTER the mod and the necessary equipment needed. Also, a guy who does it all the time would know the rights and wrongs....neither of which I'll know!!!

Yes, the price looks good to me and I'll be contacting him after I receive this new 2510.

was begining to wonder hehehe. raising party is after i paint every
single room in both stories, have a beer, build the shed, have a beer,
rip out the old fence, have a beer, install the new vinyl fence, have a
beer & take a piss, install new hardwood floor in the kitchen, have a
beer. thats gonna be one crooked antenna :o

Why don't you explain it. Funny why "N" connectors and other "constant
impedance" connectors are used at UHF almost exclusively.

> Make up your mind, Leland. What's important -- impedance or 'pure
> capacitance'?

Its very clear to me Frank. What is also clear is you don't.

Now that's an interesting answer..... the difference between impedance
and capacitance is that I don't understand the difference?

>> Are
>> you saying that impedance is important for connectors but not for
>> antenna grounds?
>
>See the file I sent to you.

Checked again. Still empty.

>> Why not fall back to your "pure capacitance" excuse
>> where UHF connectors are concerned?
>
>Why don't you explain it.

Alrighty.....

Any capacitor is basically a network of capacitance, inductance and
resistance. The circuit can't see the "pure capacitance" without
seeing the inductance and resistance, hence the necessity of measuring
a capacitor as an impedance since impedance = resistance + reactance.
And because frequency is directly related to reactance, impedance
changes in relation to frequency. The other issue to consider is the
dielectric of the capacitance, which will affect the frequency
linearity (Z/f curve) of the device. For all practical purposes, only
vacuum and air capacitors are linear in this respect -- all others are

not. This means that as the frequency changes, so will the resistance and/or 'pure' capacitance, or both. And this is why you -must- measure impedance at the operating frequency.

As far as connectors are concerned, both N-type and UHF-type connectors are low-impedance coaxial designs, so unless the wavelength is a few cm or higher there will be little or no reflection due to impedance mismatch (assuming there -is- an impedance mismatch). With that out of the way, the insulation is the other cause of concern. It is effectively the dielectric of the capacitance between the center conductor and the shield. So in this respect, the quality of the connector depends on the quality of the insulation. Cheap insulation will have poor high-frequency characteristics, while.... well, you get the idea. So if there is power loss it will be due to poor insulation properties (cheap materials, contamination, etc.). And -that- is why the N-type connectors are preferred for UHF and up since it is (or rather, it's -supposed- to be) a sealed connector, thereby preventing humidity and other crud from contaminating the dielectric (or corroding the contacts) and therefore causing power loss.

There you have it. It's ironic that while impedance is the primary factor in both these issues, you have misunderstood both from totally opposite ends of the spectrum. But hey, nobody's perfect.

I finally got the file but the images are sourced for a local
directory. If you want to send an html that will pull pics from a
remote website, the full url must be used in the call or the website
must be sourced in the header.

I did. In fact I just sent it again just now. It does have a file attached
so if your E-mail program filters out mail with attachments you will have to
turn it off.

> and capacitance is that I don't understand the difference?

You haven't impressed me with knowing the difference. I was addressing a
capacitance measurement only, exclusively and separate from any other
electrical property. You can't seem to figure out that your impedance
measurement combines capacitance, inductance, and resistance all together.

If I took a 1000pf vacuum capacitor and connected it in series with a 1000
ohm resistor, placed it in a black box you can't open, and brought out two
leads for you to connect to your Z-bridge then asked you to make your
measurement you would tell me I have a crappy capacitor. Then if I wanted to
give you somthing to think about I can stick a small inductor in series with
the capacitor and resistor to give some strange impedance variations with
frequency. Now try to figure out what's in the box from your Z-bridge
measurement. That's the problem you have with your measurements where the
black box is the mag-mount. Making a capacitance measurenet, or some simple
calculations, would be like peeking inside the black box and saying, Oh now
I see what is going on.

Frank it works just fine on my laptop. I stuck the whole thing in a
directory named "temp". You should have ONE file named
"AdapterSWRcalsRevC.htm, and ONE DIRECTORY named "AdapterSWRcalsRevC_images"
with everything else in it. That should work.

If you do use it, please resist the urge to crank it up and hold it 3 feet away from you while talking. While it seems cool, it picks up everything else in the house along with you voice. Keep it adjusted to where you have good modulation when about 10 to 12 inches from you, and you'll make more friends.

Huh? You said I'd never show up, and I'd never tell you the
details, well I'm doing both and now you can't waste your
time!?

Sounds more like you're afraid of what might happen to you
if you said any of the shit you like to type, to my face.

What's wrong Nadia, big man behind the keyboard but a coward
when I'll be right in your neighborhood?

Thanks for the reply. I too intend to use it on CB freqs. I also intend to get my license soon, I am moving now and plan on getting it within a month. The only other base I have consideren that is on your list is the Cobra 139. I like the 2000's but they seem a tad pricey and most I've seen are modded all to hell and have been run to death, and they still command quite a penny. I will be living close to an interstate so rejection is needed, it also needs to be fairly easy to operate as the Mrs will use it to contact when I'm on the land (another reason a Ham rig is out of the question for this app)

I will probably have a ham and CB rig, I was looking for something stout and new. I will do more research, your review on the CBS1000 is on par with what I thought also, I just don't like the looks of the insides as much as the 2547. Once again thanks, you have given me quite a few radios to read about!

heh-heh... I'll have to admit I made a very stupid decision to stay. When they said it was cat 2 and heading north and to evacuate here in Pinellas county, I stayed. I live in what they call "Zone A", the first to evac., lowest elevation. My reasoning was that I have never seen a hurricane head in a straight path north. It will always curve off to the right once it has a northerly direction. Also I feel that my building can withstand cat 2, especially since it would curve off just south of us and we wouldn't take the direct hit.

But after seeing what Charlie did, I think next time, I'm outta here. Charlie didn't just curve off to the right, it turned then accelerated, then strengthened all at once. It seemed to skip cat 3 and went right to 4. That's a lot of erratic behavior all at once. I'm thinking, it was a very short hop to get to Punta Gorda, and in that very short time it did all that. I'm positive that if Charlie continued north in my direction, and did all that strengthening in that long distance to get here, it would have been a cat 5 and my gambling on the weather could have been the last bet I ever made.

Yep. Next time, I'm seeking higher ground and better shelter. I'll be taking pictures of the storm from over thata-way ---->.

-Dr.X (getting a little OT ;-)

Well I'm glad you were ok, Dr.X. It seems to me that a mobile

home is one of the last places I'd want to be in those circumstances.
I've seen what a tornado does to them..shredded like they went thru
a wood chipper.

Hope Twist is ok.

I'll give it a shot. I'm heading out to work right now. I'll do it on my
way. and during lunch too.

BTW, I see in another thread that you live in Medina. When I was a kid
living in Cleveland, my parents had some close freinds living there. Ever
heard of Andy's Gun Shop? His wife was Hungarian. She made the very best
stroodle. :-P
And their daughters were knockouts. :-D

The RCI-2970 may have been marketed as a 10 meter rig, but its design is little more than a "souped up" CB rig. The 2970 especially, was of such a poor design that there were numerous reliability issues as well as transmitter spurious emission problems. If you want to live in harmony with your neighbors, that is not the rig you want.

When I refer to a "ham" rig, I'm talking about a REAL ham rig, such as an Icom, Yaesu or Kenwood, or other such full coverage H.F rigs. Rigs like this are much better designed, and will meet technical emissions specs.

Used Icom 735's can be had for $400. Yaesu FT-757's can be had for $400. Kenwood TS-440's can also be had for around the $400 range. All of them will blow the socks off of the so-called 10 meter only radios.

Frank;
Back in the 40's UHF was defined a low as 100 MHZ. I had a
friend in school that had a Hallicrafters S-36A, covered 27 to 143
MHZ. S-36's were made in the 40's. The front panel had a "logo" on
it, " Ultra High Frequency Communications Receiver". I think that

the UHF connectors first showed up in the mid 1930's.

I'm using an Icom IC-706MKII and a 102" steel whip in my car. It works great. It's a bit of an overkill, but it does everything I want, and it's built like a .... Beats the crap out of everything else I've owned. I'm not bragging - really. I just got tired of the problems and limitations of my previous converted radios and got serious. There are lots of them available used and cheap. I've seen them as low as $300 used and for less than $800 new. You have to exercise restraint though. Transmit on the ham bands any they will come looking for you. Fake calls signs don't work as 99% (well, it's most likely less, but you get the idea) of the hams check online to see if it's legit. It's not the FCC you have to worry about most of the time. Stay off the ham bands and they pretty much leave you alone.

Steve

A real good point, Steve. Stay the hell out of the 10 meter band. I
use an old S-Line Collins in the house, SSB only..sweet audio.

I have a 102" whip also, but I hate the tree pruning it does so
I put a Wilson 1000 right in the middle of the roof of my truck.

what details? you didnt email anything that is a lie

leland and n8 are in qrz. you have no real name and no real address
you are nobody. the only way you can prove you went somewhere is with
pictures ROTFLMFAO and even then it might be some one else taking them
not you lol

lelands is not afraid to have you know his real name and address his
phone numbers and his work address. like a chicken you have hidden
your real name address and phone numbers and all other info about you.
you say you are in medina ohio but you could say anything there is no
way to prove it. you are no one but a scared chicken and leland
shouldnt waste his time on you.

Hmm, I don't remember that school. Perhaps it's no longer there. I went to high school in the 80's (I'm only 37). Graduated from St. Joes on E185 & Lakeshore in '85.

Substitute Usenet for CB in the above post, and we have Spammy identified.

"morons, flakes, jerks, perverts, and creeps" Yup, that's Spamuel and
his ilk, all right.

The toothless sodomizing rednecks in "Deliverance" spoke, too. I equate both groups. Texan is but a subset of redneck. I hold low expectations for this class of "voter." GW upholds my poor impression of himself, his state, and his peers.

Well I'm glad you were ok, Dr.X. It seems to me that a mobile home is one of the last places I'd want to be in those circumstances. I've seen what a tornado does to them..shredded like they went thru a wood chipper.
Hope Twist is ok.
--
Hello Mopar! As Dr. X said, we dodged one hell of a bullet. Crazy thing, many folks evacuated and went to Orlando and got spanked. Ditto for those who went south. As for me, I did what I always do on the weekends,,,I went fishing and had some wet fun, man did it rain and rain and rain. When they had the eye of the hurricane projected to come straight into the actual mouth of Tampa Bay (the BAY itself, the actual body of water), I would have been the first in the country to greet in when it came ashore, as it would have been at my front door before anyone elses. An expected 16 to 24 foot surge and I may have been looking to buy a mobile home after the storm, as my block home would have been carried off on the crest of a wave.
When they said class IV, I thought this was it.
That last little shift and bobble to the east saved hundreds, if not thousands of lives. The Tampa Bay area is now the most populated metropolis in Florida, surpassing the Miami-Metro Dade area. We were just about to toss the emergency bags and supplies into the truck after hearing it was a Class IV, when Charlie took a stumble and fall to the east. Thanks for the good thoughts.

CB IS anonymous, it's going to stay that way, get over the gastric pain
it causes you.
That one would seek to mete out "accountability" for posting one's
opinion in usenet illustrates a freak, dude! What type accountability is
it you wish to foster upon those who dare say something on usenet with
which you may disagree?
And to answer your question,,,you weren't thinking, Davie, you never
do,,,,it's what is responsible for your foot in mouth disease and
unfettered anger toward cb anonymity. You gave up your anonymity and are
pissed at those who didn't,,,,,who had the smarts to follow their ISP

suggestions and all security experts and NOT post on the internet with their real name to a group dealing with a hobby where no ones identity is revealed. Add to the fact that you can no longer partake in your old haunts and dx on cb because someone would probably turn your azz in...if you weren't such a jerkoff and were cool with people, you could operate with no fear and talk dx on cb with the rest of us who enjoy it.

>don't pay child support

Absolutely disgusting. You can not, no matter how you attempt to present it, justify his pathetic actions by invoking the actions of others. This is a classic example of why our country is in the shape it's in,,,,people like you always looking for a reason to abdicate personal responsibility by invoking another as an excuse for their behavior.

>that was how many

>years ago 1996?

Once a criminal,,,,

> How come you never bring up Randy's drug

>conviction he is a felon.

Not pertinent. Randy was never on here calling other people criminal for talking dx and talking about amplifiers, Dogie was.

>Not some one who refuses to pay thier ex wife
>money.

There you go again, abdicating personal responsibility. A court of law has ruled he was made to pay, yet because you disagree with the law of the land, you are defending his law breaking. Thou art one of the more larger hypocrites on the group, but then again, you didn't need told that.

> I know that is all you can hang your hat on

>something as stupid as that lol very weak.

So the law is "stupid" AND "weak" when you don't agree with it. You have presented your position rather accurately.

Yea, that's the tune he was singing. It's been obvious since your
acceptance to this group that you are familiar with several players on
the air,,,,why do you profess the charade and all the bullshit about
amps and the law and the like?

Steveo is a waste of everybody's time. I offered to meet him once and he said it was too far to drive. He chickened out. You can do a google search to find the relevant post. Well he lied because he later claimed to have shown up at my apartment. Guess it wasn't too far after all. He was just too much of a chicken to meet me at the place I posted the address for the meeting. You can find that post as well. So I have zero reason to believe him whatever he says now. If he can't provide his real name, address, and phone number he can forget it. He has mine and I don't really give a flip. So what is he so scared of anyway?

What an emotional wreck you have become, Frank. You are unable to
contain yourself in any exchange with myself. Your emotions are too
strong and you have not managed how to exercise self control. The world
understands the anger you direct towards those that educate you on
matters relating to real world applications of radio, but your
insistence on remaining ignorant is your right. Lelnad even tried to
school you on what's right and you began insulting him when you finally
managed to grasp that he was right and you were wrong.

>Since you have ironically chosen to defend

>Leland,

See, in your self-limiting mind, emotions rule your roost. There is
nothing ironic about pointing out that you have chosen to insult him
for attempting to correct you and explain his approach.

> I'll offer you the task of explaining

>Leland's opinion that the inductive reactance

>and effective resistance of a capacitor are

>'unnecessary complications'.

You can't even comprehend there IS no irony except to those who are
emotionally screwed up, not unlike yourself, so there is no possible
manner of you explaining that of which you can't comprehend.

>Try anyway.

Certainly. The task you offered has nothing at all to do with you
unfairly turning to undeserved insult in all your debate. You have
certainly since checked your behavior at the door with your latter
exchanges with him after I pointed out your unprovoked insult.
Regardless what exchanges I had with Leland, I know what a Master's
degree encompasses. He is an engineer. You're a TV repairman and your
name could be Walter Mitty.

>turn it off.

I got the file with the pics. Nice work, and I'm glad to see your
acceptance of the fact that solid dielectrics (even teflon) have
dielectric constants that aren't constant with frequency. However,
your description of a UHF-type connector isn't particularly accurate.
If you had ever taken one apart you would have noticed that only a
small part of the conductor (maybe a mm or two) is actually contacting
the insulator. The rest is surrounded by an air gap, making most of
the coupled connection a section of coax using an insulator with a
dielectric constant of 1.

Regardless, I suggested that you -measure- this apparent loss, not
calculate it (.....gee, seems I've said that before.....). Since you
don't care to measure things, I did. The Adler I mentioned earlier is
a 100-watt translator tuned for TV channel 77. I measured the output
to my wattmeter through one 12' length of RG-11 and again through two
6' lengths of RG-11, the difference being that the latter adds a male
and female UHF-type connector to the line. The wattmeter showed no
visible difference. So I did the same test directly to the dummy load
and measured with an RF voltmeter at the dummy load. The difference
was a loss of 0.4 volts, which is slightly less than 1 watt, or about
0.05 dB. Yes, I use teflon connectors and I keep them clean. And no,
the coax wasn't overheated during soldering (it's all about the
technique!).

Feel free to repeat my tests, both for the UHF-type connectors and for
the mag-mounts. Just don't feed me any more calculations cause they
don't mean squat when the facts show something different.

>> >> while
>> >> impedance will "unnecessarily complicate things" for mag-mounts.
>> >
>> >You have "unnecessarily complicate things" because you don't understand
>the

>>
>>
>> Now that's an interesting answer..... the difference between impedance
>> and capacitance is that I don't understand the difference?
>
>You haven't impressed me with knowing the difference.

It was intended to educate, not to impress.

> I was addressing a
>capacitance measurement only, exclusively and separate from any other
>electrical property. You can't seem to figure out that your impedance
>measurement combines capacitance, inductance, and resistance all together.

Yes it does! That's the point! Capacitance, "exclusively and separate
from any other electrical property", is academic and has no practical
value!

>If I took a 1000pf vacuum capacitor and connected it in series with a 1000
>ohm resistor, placed it in a black box you can't open, and brought out two
>leads for you to connect to your Z-bridge then asked you to make your
>measurement you would tell me I have a crappy capacitor.

Not at all. You can tell if the reactance is linear simply by changing
the frequency feeding your impedance bridge. If it's linear then the
capacitor is fine and you simply have 1k ohms of series resistance. If
it's not linear then you might have a problem (depending on the
intended application of this 'black box').

> Then if I wanted to
>give you somthing to think about I can stick a small inductor in series with
>the capacitor and resistor to give some strange impedance variations with
>frequency. Now try to figure out what's in the box from your Z-bridge
>measurement.

Just swing the signal generator up from zero until you dip, just like
you would with a GDO. That's your resistance. If it peaks instead of
dipping then your reactances are in parallel and you must measure
resistance at DC. Then detune to measure reactances.

And at this point I need to make a point: What I just described is a
quick summary of the basic operation of a simple impedance bridge. The
impedance bridge is one of the most fundamental yet most useful tools
in radio. Now you claim to have a degree -and- you are a ham. For you
to even suggest that one can't determine the properties of an unknown
impedance network using an impedance bridge tells me that you have
never used one, or at least not more than once or twice. If you -do-
have a degree then either it isn't in electronics, you missed a lot of
labs, or the school was criminally negligent in it's course of study.
Either way, here's a few links to get you going:

http://www.tpub.com/content/neets/14193/css/14193_89.htm
ftp://bama.sbc.edu/downloads/heath/am1/

ftp://bama.sbc.edu/downloads/knight/z-brdg/

And here's a fascinating page on the dielectric properties of organic tissue that also includes instructions for an impedance bridge. Note the problems with electrode polarization at low frequencies when measuring lossy dielectrics (iow, maybe you should take a second look at your low-frequency DMM method of measuring a capacitor having a dielectric of epoxy or paint):

http://safeemf.iroe.fi.cnr.it/docs/HANDBOOK/chp4-2-1.htm

> That's the problem you have with your measurements where the
>black box is the mag-mount. Making a capacitance measurenet, or some simple
>calculations, would be like peeking inside the black box and saying, Oh now
>I see what is going on.

Here's another "black box" scenario: Using the capacitance tester on your DMM, measure the "pure" capacitance between two high impedance windings of a power or audio transformer. I can tell you right now that your measurement will be wrong, and you can't tell what's in the "box" unless you change the frequency. Same deal for the mag-mount.

LMAO!!!!!!!!!!

Not!!!!!!!!!!!!

George has proved he has an AOL account:

To: s3buell@sbcglobal.net
Subject: Warning - Posting to Newsgroups
From: Prodigy Abuse Department <abuse@prodigy.net>

Reply-To: donotreply@prodigy.net

Hello,

This is a WARNING NOTICE from the SBC Internet Services (SBCIS) Policy department, regarding abusive, offensive and/or harassing emails/postings sent from your SBCIS account.

It has been brought to our attention that you are posting on the internet newsgroups with a known AOL user as you're account information RE:
Wa3moj@Aol.com
Said individual has forwarded a complaint concerning these posts.

Be advised it is a violation of our Terms of Service (http://sbc.yahoo.com/terms/)and Acceptable Use Policy (http://support.sbcglobal.net/legal/aup.shtml) to use our service to email or post, threatening, abusive, obscene, hateful, or otherwise objectionable material.

If additional complaints are received concerning your SBCIS account, it will be TERMINATED, and you may incur an early termination fee.

Sincerely,
The SBCIS Policy Department

I was in Dallas back in 1990 on business. The have a beautiful downtown - unlike ours, it's actually alive in the evening. Lots of outdoor eating - lots of color. I was particularly struck that most of the groups I saw clustered around tables or going into and out of bars were multiracial - far more than in our so called "sophisticated" North. If you want to find rednecks you have to go no farther than Fridley. Or Hopkins, for that matter, which "taunted" the St. Louis (i.e. Jewish) Park hockey team by throwing bagels on the ice and yelling anti-Semitic epithets.

But, then again, you've just shown your own capacity for bigotry, haven't you? My guess is you have never been farther South than the Mall of America.

Dan Mercer

I also run an ICOM 706 (the older MK1) in the mobile. I'm not
especially happy with the performance though. For one thing the
squelch is not a true FM noise gate type of squelch, and it pops open
on the slightest static or hash noise on FM. The other major sore spot
is the noise blanker. For some reason the fine folks at Icom cannot
make a noise blanker which works effectively on all modes. On SSB it
works so-so. On AM and FM it does absolutely nothing. I'd hate to have
to use this rig on CB, as the noise and hash are far worse than on my
old Uniden radio.

I also have a 706 on the base. Without the noise issues of a mobile,
it's a far better performing radio.

Yes they do, I use them up to 1900 mhz, short runs of cable, with no
problems. Not sure what their loss is, but they are quite a bit
cheaper than N connectors.

No bigotry, just observation.

Isn't the Mall of America in Minnesota? I live in Colorado, last time I
drove up there, I could have sworn Denver was south of Minneapolis.

I've driven to Cabo San Lucas, is that south enough for you?

Sorry, Texans (mainly the ones who come here on vacation) irritate me as
a group. I've met perfectly wonderful individuals, and have no doubt
that tens if not hundreds of thousands of them are great people.

> tell me if you don't want to display it on the group.

Since I've only just begun getting back into radio (after 10 years not
playin' around with it), I don't really have a home freq. I usually leave my
radio on 29am when I'm driving and my friends know to switch there to give
me a shout. This lets me listen to the stereo too. But I also flip the vfo
up a few kc's and ssb to listen when the skip rolls in. Also listen to the
clowns on 35am. I only get to play in the vehicle since I live in an
apartment. No base antenna. :-(

I'll send you an email with my on air id. (sent)

Just kinda reminds me of poxie the ad-reposting hypocrite saying:

"You and Daryl Cunt jump into a thread
that was directed at Uncle Spammy, and threaten
and actually act upon spreading the erroneous identity
information all over usenet, specifically to incite and
induce harm."

Now this is the same poxie who was posting binaries of peoples' car
license plates...

The same poxie who posted GPS coordinates for a private residence...

The same poxie who's getting a wee bit out of control lately...

Starting to feel the heat poxie?

Yes...wasn't it Daryl who said he had Vox Populi traced to a Comcast
connection...hmmm...a little spoofing misdirection ploy by poxie perhaps?

He's shown the willingness to sacrifice quite a few 3rd parties at the
altar of hide and go seek, today it was some poor psychotherapist...

Onward.

Why don't you show everybody where I said they don't work. Same goes for the link I sent you. That person did exactly what you proposed, used an expensive RF network analyzer, and reached conclusions just the opposite from yours.

http://www.qsl.net/vk3jeg/pl259tst.html

I'll let people read the paper for themselves. Nowhere does the aurthor say "they shouldn't work at all at those freqs", which is a flat out lie on your part.

I just bought a new Jetta TDI instead:-) I got to thinkin', before I dump a lot of time in this antenna idea, why am I driving a 17mpg vehicle around when I could be getting 48mpg with a diesel:-). I'm eventually going to sell the truck too. Never thought I would, it's SUCH a great truck but I really don't need it. I'm just wasting gas. Primarily, I bought it to travel to accounts and take machinery back and forth....but with the price of freight, I just have people ship it instead.

We already have a SUV that's perfectly capable of pulling our boats out of the water and into the garages at our lake house.

I pick it up this Friday and will install the 2510 and wilson over the weekend.

Maybe Dr DX can give me a radio check in FLA :-)

Don

You're down there in Kool Aid's area. I'm down with some of the
southside radios, but in north Pinellas.

>I'm in South Pinellas but north side of St. Pete

>around the Gandy.

>Yep. Next time, I'm seeking higher ground and
>better shelter. I'll be taking pictures of the

>storm from over thata-way ---->.
..

You and me both. You can caravan with us as we head to South Beach for
the next one.

>um... a great big convoy? lol

Why not? We can have a mini-road trip, keep in touch with radios, get
some good grub at a roadside mom and pop joint somewhere in the
sticks,,,like YeeHaw Junction, but then that would be the long way to S.
Beach.

_
I'm in North Pinellas. What's your home frequency? Send me an email and
tell me if you don't want to display it on the group.

>Since I've only just begun getting back into

>radio (after 10 years not playin' around with it),

>listen when the skip rolls in.

Welcome back to radio. The frequencies you mentioned in your email I
also occasionally check out.

>Also listen to the clowns on 35am.

Addressed in email.

>I only get to

>play in the vehicle since I live in an apartment.
>No base antenna. :-(

How bad ya' wanna talk <g>? You can always figure something out to get
ya' on the air from an apartment,,,,,maybe a dipole or a temporary
setup, from a mag mount on something to a noground marine mount or maybe
something completely temporary,,,like an antron painted a dark color and
unfurled only at night off the balcony right against the building <g> .

>I'll send you an email with my on air id. (sent)

>-Dr.X

Not sure where your favorite dx spot is down there, but I'm sure you
know of the prime spots by now. Gandy Beach (The Redneck Riviera) is
pretty good.

twistedhed@webtv.net (Twistedhed) wrote in news:11465-412183E6-135
@storefull-3252.bay.webtv.net:
Absolutely disgusting. You can not, no matter
how you attempt to
present it, justify his pathetic actions by
invoking the actions of others.

>No twist

Yea, Geo...it certainly is. I know you find no problem with his
behavior, otherwise you would not point to others to justify his.

> what is disgusting is no named assholes like

>yourself and the guy in medina etc want to

>justify thier actions and post personal info

>beause Doug said something on a usenet.

What actions may those be? Cite the specific action you accuse me of
justifying, then go ahead and conjure some more bullshit.

-
This
is a classic example of why our country is in the shape it's
in,,,,people like you always looking for a reason to abdicate personal
responsibility by invoking another as an excuse for their behavior.

>That is exactly what you and your ilk are

>doing,

Again, cite the specific act you accuse me of justifying, then be so
kind as to cite but a single example of what you misinterpret as me
justifying my actions, and to whom.

>it has been my whole problem with you twsit

>from day one

You've been wrong about this since day one.

> ...HYPOCRITE.. It is ok for you to justify your

>behaviour based on Doug's action...

First you accuse me of justifying my yet-to-be-defined actions, now you accuse me of justifying my behaviors. Your "problem" you allude, is you have a problem with what you falsely perceive as my "behavior", whatever that means on usenet. taking into account my ip has not changed at all in, what,,,,,over 5 years, and my email addy is the same, it appears my ip (who, by the way, is the only opinion that matters when it comes to my usenet "behavior" YOU mentioned having a problem with)
sees it differently. But then again, everyone sees things different from you. Perhaps this is what constitutes your hostility and bullshit against cbers for freebanding and talking dxt. It's more than clear you are no silent op who copies the mail on the bowl for entertainment..pretending to be something you're not,,,ah, never mind, we all need our escapes and this is your fantasy....

>No way twsit it goes against exactly what you

>are arguing in this thread.

>that was how many

>years ago 1996?

Once a criminal,,,,

>Yes you should know, if you freeband and use
>amps etc break laws who knows what other

>laws you have broken,

One is not a criminal unless the courts finds one guilty.

>let's have your name

CB is anonymous. Asking for one's personal identity on the internet goes against everything all the security experts warn about and what is located in the warnings provided by the internet providers. Why can't you comprhend that? Could it be perhaps you didnt listen?

>twist so we can see if you owe any child

>support.

It's not about me, never was and YOU brought Dogie up. Dogie wrongly accused many decent cb users of being felons for no other reason than POSTING about amplifiers and dx and the like, while he was the felon all along. You have no argument or defense of this.
Asking questions of my personal life is not related to Dogie's personal and felonious troubles nor to any of the behavior he brought here and upon himself.

> How come you never bring up Randy's drug

>conviction he is a felon.

Not pertinent. Randy was never on here calling other people criminal for talking dx and talking about amplifiers, Dogie was.

>Bingo .....And therin lies your problem, I will

>use your exact quote if you don't mind.

I'm not the one with the problem,,,remember, YOU are. You came out here and told the world YOU have a problem with me. Try and remember your problem from paragraph to paragraph. Not doing so makes you seem insane, like 'ol Dick used to say of you.

" This is a classic example of why our country is in the shape it's in,,,,people like you always looking for a reason to abdicate personal responsibility by invoking another as an excuse for their behavior.

>Not some one who refuses to pay thier ex wife
>money.

There you go again, abdicating personal responsibility.

>Just as you and you're ilk twist, return fire.. is

>what they say right

I never abdicate my responsibility. In fact, I have always maintained that one shouldn't do the crime if one can't do the crime. 10G is a rather cheap fine to pay for something you really love, especially if you can afford it. Some states have thoseposted interstate signs that cite their speeding tickets that increase with your speed. I know someone who shrugs at the signs as he whizzes by in his sports car and laughs, literally saying "I can afford that". And perhaps he can, but some of us can't pay astronomical insurance rates for the points those tickets bring. I learned that back when I was a kid and played motorcycle for a few years.

_
A court of law has ruled he was made to pay,
yet because you disagree
with the law of
the land, you are defending his law breaking.

>No one is defending his lawbreaking that is

>just you trying to think for others again.

You have defended him. Not surprised you can't see it,,,you can't see things the way others do and you're insane, according to Dick, and I believed him then and believe him now.

_
Thou art one of the more
larger hypocrites on the group, but then again, you didn't need told that.

>Touche, perhasp, but I stand beneath you as

>you are the ordained large hypocrite of this

>group

I better look below next time I urinate, since that is where you claim
to be.

> I know that is all you can hang your hat on

>something as stupid as that lol very weak.

So the law is "stupid" AND "weak" when you don't agree with it.

>No

No? What do you mean "no'? You just said it.
Need to see it again unedited and in it's original context that you
snipped from this repost of yours?

> you and you're ilk breaking doug balls about

>it calling him a felon

You have said many times "if the shoe fits",,and on other occasions, you
have said "the truth hurts". What's the matter? Is that only applied
selectively by you? Why, of COURSE it is.
Never mind though, as it's really irrelevant, as the COURTS found him
guilty and branded him a felon, not I, not Moped, not anyone else. We
merely find it so ironic that one who would call those who POSTED about
amps and freeband and dx, a felon, while they were the felon. Classic
projection to the max. Now,,,take all his sexual bullshit and
perversions he posted over the years, apply the same logic, and one
scary ass picture suddenly emerges.

>and again there you are

>thinking for me again, I never said i didn't

>agree with the law, they were you putting

>words into my mouth again.

You said it was "stupid and weak". Re-read it the manner in which you
originally posted prior to your selective editing that left out that
impression.

_
You have
presented your position rather accurately.

>And you have done the same, you just

>reinforced you're hypocritical views for all to

>clearly see.

As always, your opinion was forcibly Twisted and not in line with the
moral majority.

>Shame the hurricane didn't clear you're mind

>at all, it seems it just added to the dementia.

I'm not the one seeking justifications for other people's usenet postings that you claim constitute "actions" and "behaviors" that only YOU have a problem with.

>Good day

Always. I'm in the sunshine state on the suncaost, and even during the hurricane, the sun managed to shine at least one each day. Stop being such a phony and acting like you give a damn about dx and amp use.

Thank you for your reply.
1) What is the first toggle switch on the upper left used for? It says S/RF SWR and CAL.
2) The next toggle says NB/ANL ANL and OFF, what is that used for?
3) The dials labled "Dynamike", "RF Gain", "Delta Tune" and "SWR Cal" what are those for?

CB IS anonymous, it's going to stay that way, get over the gastric pain
it causes you.

>And that is the main reason why there are so

>many malcontents on there.

Perhaps, perhaps not, but that is neither here nor there, and a problem
of yours. Stop trying to make it someone elses problem.

>Even the youngest, still wet-behind-the-ears

>hooligan will tell you that they tend to partake

>in more mischief if they have less of a chance

>of being caught.

It's sad that your trust in fellow man has eroded to such a point. Most
of us look for the good in people, not the bad.

_
That one would seek to mete out "accountability" for posting one's
opinion in usenet illustrates a freak, dude!

>Not at all. If you are attempting to pass

>yourself and your opinions off in a serious

>discussion, with any sort of credibility, you

>have to be accountable for what you say.

In a group dedicated to mere posting concerning an anonymous hobby, what
type accountability and credibility do you seek? How long have you
looked to cb venues seeking "serious" discussion?

>It doesn't take any special courage or daring

>to make inflammatory comments while hiding

>behind an anonymous handle.

No doubt about it. Same can be said for radio. Merely possessing your
hammie call doesn't abdicate you from being anonymous if you wanted.
Same goes for this forum.

>Why should anyone take what a person like

>that says seriously, when they don't have the

>character to identify themselves?

Depends what you define as "identify".
In your case, you ask for names, backgrounds, etc, of those who you disagree with on usenet.
And perhaps, just,,perhaps, because the entire world of security experts SAY SO?

_
What type accountability is
it you wish to foster upon those who dare say
something on usenet with which you may disagree?

>There is nothing wrong with a healthy

>disagreement. But when you make unfounded
>character assassinations against those you

>disagree with and then run and hide behind

>your cloak of anonymity, that's not the sign of

>a mature person.

If it were a true character assassination and something was injurous or libelous, and IF you actually believed that bullshit and cared enough to actually want to do something about it, there are simple channels to follow and remedy the situation. At the very least, if this occurred, one could surely prove such and illustrate the passage in the person's isp that relates to such behavior and the service will take action.

>Having your identity known, at least tempers

>the temptation to act like a retard.

And goes against everything the world of security experts and all isp's tell you. As far as I know, acting like "a retard" is perfectly legal, but if you had your way, anything you deemed 'acting like a retard" would most certainly be illegal.

_
And to answer your question,,,you weren't thinking, Davie, you never do,,,,it's what is responsible for your foot in mouth disease and unfettered anger toward cb anonymity. You gave up your anonymity and are pissed at those who didn't

>Not at all. I stand behind what I say,

You do? Shall we take those inquiries one at a time concerning those unanswered claims you were asked to provide for?
You said a cber was busted in your area awhile back and went through the courts. I politely called you on it and asked you to provide some of

this "credibility" you speak of and demand of the rest of the usenet world. You became insultive and began attacking myself and going off-topic without providing anything but lipservice. You have failed to produce any of this "credibility' you demand of others, concerning your claim.

>and I have the credibility

Not on the Philly cber issue you don't, and not on the Phelps antenna issue you don't, and,,,,ah, that's enough to keep you foaming at the mouth and rabidly attacking me for a few days.

>and accountability to

>say so in a serious and mature manner. If I

>misbehave like the hordes of anonymous

>posters on this group, it becomes a simple

>matter to rectify the situation.

It's not up to you Davie, to rectify anything. THAT'S your problem...you think it is.

>Not so when you're anonymous and take

>advantage of the many network tools to

>conceal your origin. So it allows "bad" people

>to continue to be "bad".

No,,the internet does not "allow" people to do anything. PEOPLE allow themselves to be involved in such fiascos. You are illustrating the risks of the internet perfectly with your citing "bad" people,,,,,all the more reason to follow the internet security experts advice, Davie. Just because one doesn't post with their real name, Davie, doesn't make them "baaad" people. In fact, it makes them a little more clued in than you on the dangers of the internet and these "bad" people you speak of.

–
,,,,,who had the smarts to follow their ISP suggestions and all security experts and NOT post on the internet with their real name to a group dealing with a hobby where no ones identity is revealed.

>No one has suggested anything of the sort.

>The only thing that they warn is not to give out
>personal information such as social security

>numbers and such.

Most people know their real name is personal information. See how far removed your beliefs are from the moral majority..

>If you have nothing to hide, you have nothing

>to fear.

That is an old cliche used by authoritarians the world over to cast doubt on the motives of civil libertarians that actually care about such things as privacy. The cliche is also often used as a means to shut off debate on the actual issue, since no one wants other people to think they may have something to hide. This plays on the psyche of people and was used by the Nazis for psychological warfare on their own people expected of being dissidents. Such anti-american insinuation that one may have something to hide merely for not posting their real name to the internet as their user name
will not stop me from defending privacy rights that belong to you as well,, as an American, even if you don't appreciate your liberties or take advantage of them.

_
Add to the fact that you can no longer partake in your old haunts and dx on cb because someone would probably turn your azz in...if you weren't such a jerkoff and were cool with people, you could operate with no fear and talk dx on cb with the rest of us who enjoy it.

>I never liked talking DX on CB after the first

>hundred or so contacts that I made almost 30

>years ago. DX is nothing more than a source

>of irritation to me, as the noise level prevents

>comfortable local chit-chatting.

Fine, No one faults you for it. But for you to come out here and constantly complain about what bothers you over and over concerning cb, and tell others who really do enjoy cb and dx what is wrong with them doing it,
in a cb group, no less, illustrates your motives, whether you are aware of your own behavior or not.

>Any desire that I might have to talk long

>distance can easily be taken care of LEGALLY
>on the ham bands, so your conjecture is like

>many of your others, just plain wrong.

The hammie bands are dead for HF DX,,they got nothing on eleven meter, including freeband.

>BTW, Who is Kim T. Hall?

Exactly.

>Oh, and you might not believe this, but I'm

>glad that you survived the storm. I don't like to

>see bad things happen to anyone.

>Dave

>"Sandbagger"

>N3CVJ

>http://home.ptd.net/~n3cv

Why would I not believe that? Only subhumans wish ill will on others for stating their opinions.

Hello, Twist

My parents live in Sun City Center. They were very happy that the
hurricane struck a different area too. Had a death in the family and
ran into some folks I haven't seen (or heard from either) in 10 years.
Turns out they live in Sun City Center too - but took one of the last
flights out of Tampa to come up for the funeral. They were worried as
to what they would return to, but, of course, had a pleasant surprise.
Of course, many other folks who thought they weren't going to get hit
did - and big time too. A few years back we got hit with winds
clocked at 78 MPH and it did tear down some trees - and 78 MPH is a
lot less than the winds that hurricane packed.

Glad you're ok.

73 from Rochester, NY
Jim

How pathetic, he still answers his own posts.
Leave him alone a Mopar, he's going through
withdrawals because people are ignoring him.

Have a great Time at Woodward!

I'm in Saint Petersburg across the bay from Tampa. We didn't get anything at all from Charlie aside from gray sky. We get worse weather on our normal days. It rains here once a day for about 20 min. at almost the same time every day (set your watch by it) and it's always thunderstorms. Vicious ones at that. I think Charlie's outer bands gave us a little break.

Punta Gorda is a shambles. I really feel for them.

Dr.X

They might have fixed those problems with the newer generations - MKII
and MKIIg because I don't have any complaints about mine. Funny about the noise
blanker, I notice a big difference with it on mine. The squelch is a little
funny and hard to get used to with it being the RF gain control in some modes,
and squelch in others. That is weird.

Do you have any filters in it? I have SSB and CW filters installed and
the SSB filter works wonders and combined with the IF shift, you can do some
amazing things with it. I've been able to isolate one person out of a virtual
zoo fest at times using the combination of the two. Yup, I'm really happy with
mine. I know that Icom made a lot of changes to the 706MKII that resolved a lot
of issues with the first one. And the price has plummeted too. I paid over $1300
for mine brand new, and now you can get the MKIIg with a DSP and 440MHz for less
than $800 without the filters or speech module. That's one hell of a price drop.
I've been kicking myself in the ass a long time over that!

I did. This is what I read: "....I must admit that the UHF type barrel
connector employed here was of fairly poor quality....". That's not
exactly a fair evaluation, now is it? That's like declaring SSB sucks
because the Pace Sidetalk you picked up at a yard sale doesn't sound
like your surround-sound home theater system.

You work as an R&D engineer at an electronics firm, right? So why not
just take five minutes from your lunch hour to test the damn things?
Wouldn't that be a whole lot easier than spending all that time
digging up subjective internet pages and typing up excuses for not
doing the test? I have done tests (on both UHF connectors -and-
mag-mounts) that you can easily repeat for yourself. So what's the
problem?

It's just an effect of trying to "multi-task" many functions in a
small radio.

>
> Do you have any filters in it?

Just the standard ones in the mobile. The base unit has the 1.9 Khz
narrow SSB filter.

> I have SSB and CW filters installed and
>the SSB filter works wonders and combined with the IF shift, you can do some
>amazing things with it.

But these are only effective on SSB. SSB performance on my rig is
acceptable. It's AM and FM which fall far short. Not that I use AM all
that much in the mobile, but other people might be considering one of
these radios to use on CB and it's probably not the best choice if you
use AM primarily.

Yep. The prices of the MK-1's came way down too. $400 buys a lot of
radio in this package.

Well I'm glad you were ok, Dr.X. It seems to me that a mobile home is
one of the last places I'd want to be in those circumstances. I've seen
what a tornado does to them..shredded like they went thru a wood
chipper.
Hope Twist is ok.
--
Hello Mopar! As Dr. X said, we dodged one hell of a bullet. Crazy thing,
many folks evacuated and went to Orlando and got spanked. Ditto for
those who went south. As for me, I did what I always do on the
weekends,,,I went fishing and had some wet fun, man did it rain and rain
and rain. When they had the eye of the hurricane projected to come
straight into the actual mouth of Tampa Bay (the BAY itself, the actual
body of water), I would have been the first in the country to greet in
when it came ashore, as it would have been at my front door before
anyone elses. An expected 16 to 24 foot surge and I may have been
looking to buy a mobile home after the storm, as my block home would
have been carried off on the crest of a wave. When they said class IV, I
thought this was it. That last little shift and bobble to the east saved
hundreds, if not thousands of lives. The Tampa Bay area is now the most
populated metropolis in Florida, surpassing the Miami-Metro Dade area.
We were just about to toss the emergency bags and supplies into the
truck after hearing it was a Class IV, when Charlie took a stumble and
fall to the east. Thanks for the good thoughts.

–

Hello, Twist
My parents live in Sun City Center. They were very happy that the
hurricane struck a different area too. Had a death in the family and ran
into some folks I haven't seen (or heard from either) in 10 years.
  Turns out they live in Sun City Center too - but took one of the
last flights out of Tampa to come up for the funeral. They were worried
as to what they would return to, but, of course, had a pleasant
surprise.
  Of course, many other folks who thought they weren't going to get
hit *did* - and big time too. A few years back we got hit with winds
clocked at 78 MPH and it did tear down some trees - and 78 MPH is a lot
less than the winds that hurricane packed.
Glad you're ok.
73 from Rochester, NY
Jim

–

Hi Jim! My condolences.
Yea, that's right, I forgot your parents live in the Sun City hub....now,,when are you coming down to visit them again? Glad they were ok, Jim. I know they were getting some heavier weather than us, as they were receiving the outer band weather,,,all we got was some clouds and breeze. The next day and day after was when we got the rains. I killed a pygmy rattler in my living room and two more in the yard a day after the heavy rains. Cooter Mae was acting really strange the day after the rains and kept barking at the sofa. I thought she may have lost a toy or something under it and when I moved it to see what she was barking at.... imagine my surprise when I saw the 12 inch little viper. I usually don't kill snakes, as I prefer them in my yard as opposed to their favorite food (citrus rats, mice, etc.) but the boot heel came down on this little fella. I pulled his fangs with pliers and stuck them in a little plastic jar and put it on the mantle below the mounted jackalope and 1978 grandaddy hog head. Thanks for the good thoughts. After seeing what Charlie did to our friends to the south, I'm with Dr. X. Color me gone when that next one draws a bead on Tampa Bay.

The Tampa Bay area wasn't hit too bad.....but get JUST outside our area
to the south across the big bridge, and damage starts becoming apparent.
If that thing would have hit Tampa Bay I am without a doubt it would
have made Andrew and Hugo look weak by comparison.

Hello Dr. X. Thanks for the contact last night! You sounded good for
being way down the other end of the county in between a couple of
warehouses in a mobile. I had the dx just starting to run when we made
contact. Maryland came in and then conditions got weird..I was listening
to a guy in Palm Beach talking to a guy in Sarasota. The guy in Palm
Beach was loud and proud while the Sarasota signal didn't budge my
needle,,,nuthin' but audio.

Absolutely disgusting. You can not, no matter how you attempt to
present it, justify his pathetic actions by invoking the actions of
others.

>No twist

Yea, Geo...it certainly is. I know you find no problem with his
behavior, otherwise you would not point to others to justify his.

> what is disgusting is no named assholes like

>yourself and the guy in medina etc want to

>justify thier actions and post personal info

>beause Doug said something on a usenet.

What actions may those be? Cite the specific action you accuse me of
justifying, then go ahead and conjure some more bullshit.

>your posting under sock puppets

Deck-the-hall@webtv isn't a sock puppet. Check the headers.

>posting the

>fcc repeater info,

That's a personal problem of yours. Dogie constantly made posts about
people cbers getting popped. When he got busted the FCC made it known
publicly, not I, not Mopar. Bringing it this group's attention appears
to have rattled you for reasons only you seem to understand or care
about..

>posting about Kathy,

Let's see,,,Dogie ranted for years over a picture I posted of a middle
grounds fishing trip. The poor dolt assumed it was my family and began
verbally abusing the child in the photo. What is it with Dogie's
penchant for abusing children? You certainly didn' have anything to say
when he was initiating all the behavior that came back on him full tilt.
You just cry and moan.

>posting

>about his child support shall I name more for

>you twisty

I wasn't the one that brought that to the public, get your story straight. The fact that Dogie commits felony crimes and the fact that it is made public for a REASON really galls you. Once again, I didn't make his felonious ways known to the public,,,he did that first by breaking the law. Crimes of that nature are public record for a reason. Attacking the messenger is futile.

_
Again, cite the specific act you accuse me of justifying, then be so kind as to cite but a single example of what you misinterpret as me justifying my actions, and to whom.\

>See above post shifty, not so fast

You cited nothing at all. All you did was toss accusational lipservice.

>it has been my whole problem with you twsit

>from day one

You've been wrong about this since day one.

>I have been 100% right about you from my

>first post about you, it still holds true to this

>day.

You're still clueless. In fact, you are have been on the outside looking in on this group for years and that is why not a single day goes by without you making hostile, nasty , insultive posts to this group and it's regulars. You don't have the intellect to debate these folks so you take the last refuge of the incompetent.......insult.

>Yes you should know, if you freeband and use
>amps etc break laws who knows what other

>laws you have broken,

One is not a criminal unless the courts finds one guilty.

>I asked what other laws have you broken,

Exactly,,you are invoking another as a means of,,,,,,,,,,,what? LOL! Examine and put some introspect on *why* you feel the need to invoke another and why you are concerned with my off-topic personal life and you will find the bane of your existence.
You have always seeked personal information on me. Not relevant to Dogie's (remember,,,YOU made him a part of this conversation) felonious lawbreaking.

>I didnt call you a criminal, as usual using

>you're twisted logic if one murders someone

>and isn't caught he is not a criminal.. LOL

Exactly. He is but a suspect. That is the way it works in America and you have llustrated your disdain for American freedoms and those who exercise those freedoms. Keeping with the topic, you break the law all the time you cry to others about. There is just about no question you are on the bowl and active. But you go ahead and squirm some more and try and peek into other's personal lives and bitch about the laws of this country that have you wound so impotently tight.

>let's have your name

CB is anonymous.

>This isn't CB, dipshit

Correct. It's a usenet dedicated to the anonymous hobby of cb. According to ALL security experts who comment on such matters, that is the correct way to communicate on public internet forums. You disagreeing is your problem, not those who follow the expert advice.

_
Asking for one's personal identity on the internet goes
against everything all the security experts warn about and what is
located in the warnings provided by the internet providers. Why can't
you comprhend that? Could it be perhaps you didnt listen?

>No I guess it is the same reason you have no

>clue as to who I am.

I don't share your sickness and mania for personal identities. In fact, I never asked your identity because I don't care. You're a non-factor. That you made me such a factor in your world and life speaks volumes about your mental status and life's priorities.

>twist so we can see if you owe any child

>support.

It's not about me, never was and YOU brought Dogie up.

>I did not I was part of this thread where steveo
>brought dougie into it you join in as noted

>dougie was the topic

Not between you and I he wasn't. Again, go check your posts since you are having such great difficulty is remembering what you say and post thread to thread and paragraph to paragraph. YOU invoked Dogie to me.

_
Dogie wrongly

accused many decent cb users of being felons for no other reason than POSTING about amplifiers and dx and the like, while he was the felon all along. You have no argument or defense of this.

>You are correct i can't defend what he has

>done, but it still doesn't mean these peoiple

>arent law breakers and criminals.

The same can be said for the people for whom with he initiated his imagined cb war. Only you were curiously silent during his reign of abuse.
When the FCC pops you in such a nature, that's it, you're busted. When the courst find one guilty of a felony, as they did with Dogie, that most certainly makes him a law breaker and felon.

_
I'm not the one with the problem,,,remember, YOU are. You came out here and told the world YOU have a problem with me. Try and remember your problem from paragraph to paragraph. Not doing so makes you seem insane, like 'ol Dick used to say of you.

> Oh god another reference to dead Dick,

Yea,,,some people have no problem keeping the memory of good folks alive. The only one's who have a problem with his posts are those he outed as troublemakers.

> he

>had no clue nor did he know anything about

>me other than his delusinal mind.

Now that's rich. You calling N0BK delusional. Now how many in the radio world do you think would agree with your statement? None. As usual, you're all alone and clueless, not able to see things as the moral majority..

_
>You cling to it because you have nothing else

>to, Dougie called you insane

Dogie is a liar, criminal, felon, child abuser. Only slugs like you look to such thugs like him for their answers.

>and so has a few others , i think you are

>insane to.

If I cared what you think, I may have had something to entertain for a split second. You have went out of your way on many occasion before this to illustrate how greatly you care about what I think.

_
There you go again, abdicating personal responsibility.

>and there you are selectivly deciding which

>laws you feel are ok to break and others are

>not.

> hypocriticaly again

How do you figure that is being a hypocrite? I do the same exact thing you do,,,,talk dx. Only YOU need the amp on 6,,,,not I. I dx. Breaking the dx law is nowhere near comparable to Dogie's felonious ways. If it was, talking dx would be a felony. Sucks for you, but alas, it's not even ever been enforced because the law doesn't hold it a crime, and neither do you. You're just holding on to that because you have nothing else. You're washed up and a hypocrite.

_
I never abdicate my responsibility. In fact, I have always maintained that one shouldn't do the crime if one can't do the crime. 10G is a rather cheap fine to pay for something you really love, especially if you can afford it. Some states have thoseposted interstate signs that cite their speeding tickets that increase with your speed. I know someone who shrugs at the signs as he whizzes by in his sports car and laughs, literally saying "I can afford that". And perhaps he can, but some of us can't pay astronomical insurance rates for the points those tickets bring. I learned that back when I was a kid and played motorcycle for a few years.

_
You have defended him. Not surprised you can't see it,,,you can't see things the way others do and you're insane, according to Dick, and I believed him then and believe him now.

>You don't know dick about me

LOL,,but you profess to "know" about me since "day one"..lol. The only thing you know is what has been intentionally tossed under the table to you. Once again, I'm not the one seeking and claiming to "know" personal things,,,,you are. You always are. You can't help it. You have no self-control and no life, so you grab onto the tail of other's peoples lives.

>or Dick didn;t know dick about me you are

>beating a dead horse with that and looking

>mighty desperate to keep quoting a deadman

>who has never talked to me or know who I am.

Your desperation is illustrated daily with your constant flow of juvenile obscenities.

_
Always. I'm in the sunshine state on the suncoast, and even during the hurricane, the sun managed to shine at least one each day. Stop being such a phony and acting like you give a damn about dx and amp use.

>When you stop being a hypocrite.

Lipservice doesn't cut it.

I look for the good in people too. It's a shame that it's getting
harder and harder to find. Wanting to believe that some people are
good, does not change the fact that a great number are bad. I am a
realist, I deal with reality, not how I'd like it to be.

>Same goes for this forum.

People identify on ham radio for a reason. People don't identify on CB
for the same reason. I have far more to be suspicious of, when someone
is afraid to identify themselves. I have to wonder what they are
hiding from.

>
>>Why should anyone take what a person like

I have NEVER asked for specific personal details. However, a person's
name, and their credentials will establish their expertise in related
topics. Who would you be most likely to believe on matters of radio,
someone firmly established in the art, with a good education and
background, or someone with the vague identifier: "Rubber Duck"?

>And perhaps, just,,perhaps, because the entire world of security experts
>SAY SO?

That is a bit of an exaggeration and a stretch of the truth.

>follow and remedy the situation.

Are you suggesting that there are ways to identify someone who takes serious steps to hide their identity? Or are you saying that we all should just have to deal with abusive insulting and libelous comments because they are not worth the trouble to pursue seriously?

I believe in the example of not saying something on a forum, that you wouldn't have the cajones to say to someone's face. The fact is that being anonymous eliminates the small chance that the person you may insult might someday show up at your door to have you "explain" yourself in person, thereby removing that little bit of polite restraint you might otherwise have. Anonymity is the enabler for people to act inappropriately, and rudely. Using the excuse that privacy overrides acting in a civilized manner is weak IMHO.

> At the very least, if this occurred,
>one could surely prove such and illustrate the passage in the person's
>isp that relates to such behavior and the service will take action.

Usually ISP's will not yank someone's account unless they become serious problems. Simply speaking one's opinion (however insulting or rude) is still a 1st amendment right, and ISP's are reluctant to go down that road.

>>Having your identity known, at least tempers
>>the temptation to act like a retard.

>And goes against everything the world of security experts and all isp's
>tell you. As far as I know, acting like "a retard" is perfectly legal,
>but if you had your way, anything you deemed 'acting like a retard"
>would most certainly be illegal.

Acting rude, inconsiderate, or anti-social, is also not illegal, but it's not something a civilized person would do in a public forum. Why should this newsgroup be treated any differently than an in-person venue?

I would not want to make these activities "illegal". If you want to act like a retard, by all means, go for it! But we all have the right to know who it is that is acting like the retard so that they can properly face the repercussions that that type of behavior brings.

That's what I mean by accountability. If you had to "face the music" for acting inappropriately, you would eventually adopt an incentive to

NOT act that way. The quality of the forums would increase
considerably.

>_
>>>And to answer your question,,,you weren't thinking, Davie, you never

>produce any of this "credibility' you demand of others, concerning your
>claim.

Gee, that's not the way I remember it. I remember making the claim
that some I knew personally was popped by local cops for interference
relating to his CB radio. You challenged the validity of my claim,
first by trying to find some sort of difference between "a suburb of"
and "suburban", suggesting that I was lying. When you failed to find
any information on the incident (Due to the mistake that you made in
assuming that "suburban philly" meant that it was within the city
limits), you again tried to insinuate that because you couldn't
understand what the difference in locations were, you again inferred
that I was lying. Even when I told you the exact town, you were unable
to find anything, which is not surprising considering how poorly the
town keeps records..

But what have you actually proven? You have proven that:
A. You can't differentiate between the suburbs, suburban, and within
city limits. You covered this mistake by implying that I was making
the whole thing up.
B. That you were unable to locate any information on the subject.
(note that this doesn't mean that there isn't any)

I am telling it as someone who was there who knew the party involved.
I know what happened. If that isn't enough for you, then so be it.

>>and I have the credibility
>
>
>Not on the Philly cber issue you don't, and not on the Phelps antenna
>issue you don't, and,,,,ah, that's enough to keep you foaming at the
>mouth and rabidly attacking me for a few days.

Defending my position and questioning your logic is hardly "attacking"
you on a personal level. That you cannot understand how someone would
not understand your initial reference to an antenna that was part of a
10 year old repeater system, and took my apparent unfamiliarity as a
sign of lying is not my problem.

>>and accountability to
>>say so in a serious and mature manner. If I

A wonderful speech, but the truth of the comment remains. If you have
nothing to hide, you are more likely to be up front about your
motives. People who insist on anonymity are suspicious right from the
start. What is it about their presence, ideas, or opinion would
predicate a need to remain anonymous? That implies a nefarious motive.

>>>Add to the fact that you can no longer partake in your old haunts and dx

>and tell others who really do enjoy cb and dx what is wrong with them
>doing it,in a cb group, no less, illustrates your motives, whether you are aware
>of your own behavior or not.

And just what are "my motives" if you going to be presumptuous as to
suggest that you might know?

Perhaps, It's just that I remember (fondly) how CB radio was in the 1970's. People played loose and fast with the rules, but despite all that, they were civil (most of the time) and the ratio of constructive or good clean fun conversations to idiots was far greater than it is today. Maybe, my biggest flaw is hoping that the FCC, through legislation and enforcement, will do what people's inner conscience and morality fail to do, and that is act civilly and considerately.

>
>>Any desire that I might have to talk long
>>distance can easily be taken care of LEGALLY
>>on the ham bands, so your conjecture is like
>>many of your others, just plain wrong.

>The hammie bands are dead for HF DX,,they got nothing on eleven meter,
>including freeband.

Hello? There is nothing magical about propagation on 11 meters. If 11 meters is open then 10, 12, and 15 are also open. When 11 isn't open, I can still talk on 20, 40, 80 and 160 meters. If you want DX, there's no more consistent place to find it than on one of the several ham bands. When the sunspot cycle is high, 11 is wide open, and talking DX is like shooting fish in a barrel. But right now, the cycle is low, and DX opportunities are sporadic. I'm betting that I'll find more DX opportunities on the H.F bands than you will solely on 11 at the current time.

Well, While I totally agree with your well written summation above, I
can't help but find it a bit hypocritical for you to take "george" to
task for justifying his actions by comparing them to the actions of
others when you yourself have used the exact same tactic.

How many times have Aaron, Frank, Leland, myself or anyone else
spelled out the behavioral problems on CB radio, and your response
was along the lines of "well, the hammie bands are full of bad eggs

too, so why pick on CBers".

you know how many men
don't pay child support
Absolutely disgusting. You can not, no matter how you attempt to present
it, justify his pathetic actions by invoking the actions of others. This
is a classic example of why our country is in the shape it's
in,,,,people like you always looking for a reason to abdicate personal
responsibility by invoking another as an excuse for their behavior.
-
>Wow! I am in 100% agreement with

>Twist.....

Yea, it's happened a few times and vice versa.

>Statistical probability favors those occasional

>moments of harmonious thoughts

Agreed.

>It's a shame more people don't follow their

>own advice.

That you consider usenet posts as actions or behavior that need
justified somehow is curiously sad.

>Well, While I totally agree with your well

>written summation above, I can't help but find

>it a bit hypocritical for you to take "george" to

>task for justifying his actions by comparing

>them to the actions of others when you

>yourself have used the exact same tactic.

Whooa! I have never defended my "actions" by invoking another's lawlessness. Nor have I ever defended a felon by unrealistically calling attention to another who may commmit simple rule infractions that are not enforced. Nor have I ever attempted comparing the two (the felon vs. the dx talker) or try to draw some type analogy between the two. That you falsely accuse me of doing so does nothing.
In fact, I have justified my actions to none at any time, as I have no one to answer to regarding my radio endeavors although you have always felt you are somehow owed an explanation. Some of you read my article in Sporadic Waves when another posted it here and blew a gasket. You especially, have demanded "justification" of "what gives me the right" to talk dx and "break the law". Holding with your past posts, Dogie's behavior must have begun with talking dx until his criminal behavior deteriorated to the point of felonious actions, resulting in the ruining of his credibility and reputation for all time. Here was a true, tried and convicted felon, calling others a felon for POSTING of their radio use.

_
posting the
activities for the obvious...the main reason being is merely talking dx is not a crime for which the FCC takes action or enforces.

>How many times have Aaron, Frank, Leland,

>myself or anyone else spelled out the

None. I have always maintained time and time again you are status-starved and have no authority concerning people's behavior on CB.

Perhaps, perhaps not, but that is neither here nor there, and a problem
of yours. Stop trying to make it someone elses problem.

>It's everyone's problem unless, of course, you

>are one of the malcontents who enjoys ruining
>other people's fun.

CB is not like that in my area. We have one channel with the lulu's,,the
rest yield great local roundtables and everyone radio-wise pretty much
knows everyone else. Being so close to Philthy, I can understand why CB
must be mess in your area. Those people are vile.

>Even the youngest, still wet-behind-the-ears

>hooligan will tell you that they tend to partake

>in more mischief if they have less of a chance

>of being caught.

It's sad that your trust in fellow man has eroded to such a point. Most
of us look for the good in people, not the bad.

>I look for the good in people too. It's a shame

>that it's getting harder and harder to find.

Yup, it is, but that doesn't shake my faith of always seeing the glass
half full and noting the good instead of the bad in most cases..that's
why it's called "faith".

>Wanting to believe that some people are

>good, does not change the fact that a great

>number are bad. I am a realist, I deal with

>reality, not how I'd like it to be.

Not true at all. You subscribe to socialist views and rhetoric,,,this is NOT how America is, but how you wish it would be. The majority of American's (THANK GOD) do not subscribe to your bullshit about allowing the authorities and anyone else an open book to your life "if you don't have anything to hide".

_
That one would seek to mete out "accountability" for posting one's opinion in usenet illustrates a freak, dude!

>Not at all. If you are attempting to pass

>yourself and your opinions off in a serious

>discussion, with any sort of credibility, you

>have to be accountable for what you say.

In a group dedicated to mere posting concerning an anonymous hobby, what type accountability and credibility do you seek? How long have you looked to cb venues seeking "serious" discussion?

>So then, you are of the opinion that this forum

>should be nothing more than an unimpeded

>free-for-all with no rules or decorum?

Please try not to answer a question with a question. How long have you looked to anonymous cb venues on the internet seeking "serious" discussion?

>Discussions about technical topics should be

>taken at face value, without the parties

>displaying their credentials?

Now you're catching on. No credentials needed for usenet posting, nor is the "identity", that has you reeling.

>It doesn't take any special courage or daring

>to make inflammatory comments while hiding

>behind an anonymous handle.

No doubt about it. Same can be said for radio. Merely possessing your hammie call doesn't abdicate you from being anonymous if you wanted. Same goes for this forum.

>People identify on ham radio for a reason.

Yea,,,,,,it's the law.

>People don't identify on CB for the same

>reason.

Wrong. One is NOT required to identify on CB.

>I have far more to be suspicious of, when

>someone is afraid to identify themselves.

That is your right. And it's the majority of the rest of the world's
right to be suspicious of you seeking another's identity on usenet,
especially when you didn't listen to the world of security experts when
they told you not to post publicly to the internet with your personal
information. There indeed are areas of the internet that a certain
amount of identity is required, but usenet, especially a cb group, is
not one of them. This is a very rare concern that has no relation to
your life and voiced only by a bitter few.

> I have to wonder what they are hiding from.

>Why should anyone take what a person like

>that says seriously, when they don't have the

>character to identify themselves?

Depends what you define as "identify".
  In your case, you ask for names, backgrounds, etc, of those who
you disagree with on usenet.

>I have NEVER asked for specific personal

>details. However, a person's name, and their

>credentials will establish their expertise in

>related topics. Who would you be most likely

>to believe on matters of radio, someone firmly

>established in the art, with a good education

>and background, or someone with the vague

>identifier: "Rubber Duck"?

Not even a valiant attempt.
Some of those "good educations" you refer have posted directions on how
to destroy your radio in the form of mods. This is exactly the reason
one should take everything on the internet with a grain of salt.
Apparently, you believe otherwise.

_
And perhaps, just,,perhaps, because the entire world of security experts
SAY SO?

> That is a bit of an exaggeration and a stretch

>of the truth.

No, it's not at all.

_
What type accountability is
it you wish to foster upon those who dare say something on usenet with
which you may disagree?

>There is nothing wrong with a healthy

>disagreement. But when you make unfounded
>character assassinations against those you

>disagree with and then run and hide behind

>your cloak of anonymity, that's not the sign of

>a mature person.

If it were a true character assassination and something was injurous or
libelous, and IF you actually believed that bullshit and cared enough to
actually want to do something about it, there are simple channels to
follow and remedy the situation.

>Are you suggesting that there are ways to

>identify someone who takes serious steps to

>hide their identity?

If unfounded character assassinations (libel) was committed, absolutely.

>Or are you saying that we all should just have

>to deal with abusive insulting and libelous

>comments because they are not worth the

>trouble to pursue seriously?

You said that.
If my emotions were to take over, I would simply trn the thing off and
walk away. No one is forcing you to partake in what you view as an
injurous electronic arena. It is your choice.

>I believe in the example of not saying

>something on a forum, that you wouldn't have

>the cajones to say to someone's face.

Very noble. Many agree with you. Obviously, those like Dogie, do not.

>The fact is that being anonymous eliminates

>the small chance that the person you may

>insult might someday show up at your door to

>have you "explain" yourself in person, thereby

>removing that little bit of polite restraint you

>might otherwise have.

I have incredible restraint and am overly polite, even to you in many instances when you began reambling off-topic with insult. I invite anyone who has a problem with me to come forward....of course, those who do, encapsulate the very idea you are railing against...not identifying themselevs, only it doesn't bother me like it does you. I have an open door policy and will meet anyone from this group for coffee, fishing, or to continue our rec.radio.cb debates. So far, I have met several from this forum and plan on meeting more. If I didn't fish for the day, and we didn't talk about politics or cb, I am certain you and I would get along just fine on the boat for an afternoon ride talking of nothing but hammie radio.

> Anonymity is the enabler for people to act

>inappropriately, and rudely. Using the excuse

>that privacy overrides acting in a civilized

>manner is weak IMHO.

No one suggested such..but the gist of it, is that American's are afforded the right to act like idiots, even it offends you to no end. Using the excuse that it ought be over-ridden is what is weak.

_
At the very least, if this occurred,
one could surely prove such and illustrate the passage in the person's isp that relates to such behavior and the service will take action.

>Usually ISP's will not yank someone's account
>unless they become serious problems.

Well, that's what you were talking about, Davie..those serious "malcontents", I believe was the word you used.

> Simply speaking one's opinion (however

>insulting or rude) is still a 1st amendment

>right, and ISP's are reluctant to go down that

>road.

You weren't talking of an opinion, Davie, you spoke of character assassination.

>Having your identity known, at least tempers

>the temptation to act like a retard.

And goes against everything the world of security experts and all isp's tell you. As far as I know, acting like "a retard" is perfectly legal, but if you had your way, anything you deemed 'acting like a retard" would most certainly be illegal.

>Acting rude, inconsiderate, or anti-social, is

>also not illegal, but it's not something a

>civilized person would do in a public forum.

Therein lies the answer to what ails you. Not all people in public forums are civilized. Nevertheless, these traits you consider uncivilized, exist in these "bad" people you speak of, and unfortunately the word is made up of good AND bad people.

>Why should this newsgroup be treated any

>differently than an in-person venue?

I happen to agree with you on this item, but why should others be forced or made to conform to our view? They shouldn't.

>I would not want to make these activities

>"illegal". If you want to act like a retard, by all

>means, go for it! But we all have the right to

>know who it is that is acting like the retard so

>that they can properly face the repercussions

>that that type of behavior brings.

No,,you don't have the right to know the identity of one just because you feel he is acting like a retard. But,,keeping with this thought you put forward, you just described exactly what happened to Dogie.

>That's what I mean by accountability. If you

>had to "face the music" for acting

>inappropriately, you would eventually adopt an

>incentive to NOT act that way. The quality of

>the forums would increase considerably.

What you feel constitutes "quality" is the opposite of what many others feel. The loss of personal privacy in this world is never an improvement in the quality of anything.

_
And to answer your question,,,you weren't thinking, Davie, you never do,,,,it's what is responsible for your foot in mouth disease and unfettered anger toward cb anonymity. You gave up your anonymity and are pissed at those who didn't

>Not at all. I stand behind what I say,

You do? Shall we take those inquiries one at a time concerning those unanswered claims you were asked to provide for? You said a cber was busted in your area awhile back and went through the courts. I politely called you on it and asked you to provide some of this "credibility" you speak of and demand of the rest of the usenet world. You became insultive and began attacking myself and going off-topic without providing anything but lipservice. You have failed to produce any of this "credibility' you demand of others, concerning your claim.

>Gee, that's not the way I remember it.

We can post those posts one by one, if the need be. Same with the Phelps. Perhaps it will jog your failing memory.

>I remember making the claim that some I

>knew personally was popped by local cops for

>interference relating to his CB radio. You

>challenged the validity of my claim,

AFTER you refused to cite a credible source, and only after did I "challenge the validity" of your claim.

>first by trying to find some sort of difference

>between "a suburb of" and "suburban",

>suggesting that I was lying.

You are lying now. YOU were the one to invoke the word "suburb", not I, and you invoked it when the heat got to hot and you realized, like said, the court documents would confirm your story. I note you originally claimed it happened IN Philthadelphia, and when I pressed on, you began the back pedal and insults, playing games and getting elusive and only then invoking "suburban" Philly. You provided nothing to this day concerning this alleged case except more posts full of lipservice and smoke..

> When you failed to find any information

AFTER you claimed it was in Philly, and AFTER you failed to provide anything at all concerning this case other than your lipservice.

> on the

>incident (Due to the mistake that you made in

>assuming that "suburban philly" meant that it

>was within the city limits), you again tried to

>insinuate that because you couldn't

>understand what the difference in locations

>were,

Makes no difference. You provided nothing but insult towards myself and offtopic rants when asked for a single source of credibility showing this occurred. You presented nothing.

> you again inferred that I was lying.

You were, and are.

>Even when I told you the exact town,

You never said the exact town and if you did, you NEVER linked it with the case you claim occurred or in the same thread. Since you claim otherwise, force feed me some crow, Davie, and show the world where you told me what town the cber got busted in and went to court. Just another in that long line of unsubstantiated bullshit,,,,

>you were

>unable to find anything, which is not surprising
>considering how poorly the town keeps

>records..

>But what have you actually proven?

That you can't correctly "recall" what occurred in past posts, but we all realized that with your goof on the Phelps that you claimed you owned, then when asked about your Phelps a few years later, replied "What Phelps? I WISH I had a Phelps Stationmaster"...LOL,,THAT was the exact antenna you claimed you owned a few years earler.

>You have

>proven that:

>A. You can't differentiate between the

>suburbs, suburban, and within city limits. You

>covered this mistake by implying that I was

>making the whole thing up.

No mistake. Nothing but lipservice regaridng this item.

>B. That you were unable to locate any

>information on the subject. (note that this

>doesn't mean that there isn't any)

Your ASSuming ignorance in getting in the way of your sense. I looked for nothing on any "subject". I specifically looked for the case you cited as receiving a citation. It never happened.

>I am telling it as someone who was there who

>knew the party involved. I know what

>happened. If that isn't enough for you, then so

>be it.

Hehe,,it's not me,,it's the law of the land when it comes right down to it,,the burden of proof is always on the claimant. It is not like a scientist yelling "The world is flat. I dare you to disprove me....haha". One doesn't need disprove another's ramblings concerning their own specialty. In such cases, one merely asks them for their proof and watches them fall apart.

>and I have the credibility

Not on the Philly cber issue you don't, and not on the Phelps antenna issue you don't, and,,,,ah, that's enough to keep you foaming at the mouth and rabidly attacking me for a few days.

>Defending my position and questioning your

>logic is hardly "attacking" you on a personal

>level.

When you continue to say "I know it happened and it isn't enough for *you*,,that is making it personal, as once again, I didn't make the rules of society, I merely conform to them and in society, the burden of proof is on the claimant, that's just the way it is

>That you cannot understand how someone

>would not understand your initial reference to

>an antenna that was part of a 10 year old

>repeater system, and took my apparent

>unfamiliarity as a sign of lying is not my

>problem.

Of course it is. You have already demonstrated you are not familiar with curent FCC law regarding the governing of CB. Now, how many CBer's and hammies present that are posting regs like yourself, can not remember an antenna they had, especially if it was part of THEIR repeater system. In fact, the majority can recall just about every radio set-up they ever had. I grew up in a home with a moonraker IV many years ago. If someone asked me "still have the moonraker?".....I would have immediately recalled the antenna to mind and so would the majority of radio ops. But not you. If one doesnt lie, one needs not worry about remembering such bullshit.

>and accountability to

>say so in a serious and mature manner. If I

>misbehave like the hordes of anonymous

>posters on this group, it becomes a simple

>matter to rectify the situation.

It's not up to you Davie, to rectify anything. THAT'S your problem...you think it is.

>It should be every person's responsibility to

>"rectify" the problem in order to preserve

>civility.

You said you are realist,yet here you sit posting the opposite and telling us how "it SHOULD be", right after posting you don't partake in such
behavior. See? Your bullshit is so deep, you can't recall what you wrote a few paragraphs ago.

>Not so when you're anonymous and take

>advantage of the many network tools to

>conceal your origin. So it allows "bad" people

>to continue to be "bad".

No,,the internet does not "allow" people to do anything. PEOPLE allow themselves to be involved in such fiascos.

>When you give people the means to be "bad"

>why should you be surprised when they act on
>it?

Are you daft? I'm not the one complaining about such things,,,*you* are. You are the only one complaining about behavior and people's acts. Add to this your invoking the mythical Voob man to illustrate one of your non-points, then turn around and invaildate yourself with the claim concerning posts with no positive personal identity. You need a very long vacation, Davie.

_
You are illustrating the
risks of the internet perfectly with your citing "bad" people,,,,,all the more reason to follow the internet security experts advice, Davie. Just because one doesn't post with their real name, Davie, doesn't make them "baaad" people.

>No, that in itself doesn't. I never said that all

>people who post anonymously are "bad", but it
>is by far more tempting for them to be, rather

>than if they are easily identified.

Now you are concerning yourself with the temptations to your fellow man caused by anonynmity on the internet. If this is what you need concern yourself with, you lead a blessed life.
-
,,,,,who had the smarts to follow their ISP suggestions and all security experts and NOT post on the internet with their real name to a group dealing with a hobby where no ones identity is revealed.

>No one has suggested anything of the sort.

>The only thing that they warn is not to give out
>personal information such as social security

>numbers and such.

Most people know their real name is personal information. See how far removed your beliefs are from the moral majority..

>It takes more than a person's name to invoke

>identity theft.

That is only one of the reasons for warning against such practice. And no, it doesn't take anything more than person's anme for identity theft on usenet (ANOTHER reason for keeping info secure), and that is exactly why your full name is considered "personal" inormation by all except yourself. Another reason for you to take what you read on the intetrnet with a grain of salt.

>If you have nothing to hide, you have nothing

>to fear.

That is an old cliche used by authoritarians the world over to cast doubt on the motives of civil libertarians that actually care about such things as privacy. The cliche is also often used as a means to shut off debate on the actual issue, since no one wants other people to think they may have something to hide. This plays on the psyche of people and was used by the Nazis for psychological warfare on their own people expected of being dissidents. Such anti-american insinuation that one may have something to hide merely for not posting their real name to the internet as their user name
will not stop me from defending privacy rights that belong to you as well,, as an American, even if you don't appreciate your liberties or take advantage of them.

>A wonderful speech, but the truth of the

>comment remains.

Wrong. Your entire point revolving around having nothing to hide is invalid and anti-American and is NOT the way we do things herte in the USA, at least, not yet.

> If you have nothing to hide,

>you are more likely to be up front about your

>motives.

That's NOT what you said,,,you said if you have nothing to fear then you have nothing to hide, and THAT, my friend is Orwellian totalitarian bullshit.

> People who insist on anonymity are

>suspicious right from the start.

I give you Thomas Paine.

>What is it about their presence, ideas, or

>opinion would predicate a need to remain

>anonymous?

Unfair retailiation by neanderthals who feel they have a right to decide how others should live. Unfair imposition by those who don't agree with what was written. Oppressive governments, like the one that is responsible for people like you being scared into giving up liberties in the name of temporary security. People who feel they are somehow owed an explanation by internet posters and retaliate with personal attacks concerning offtopic and inquiries of personal matters and lives. The reasons are endless.

> That implies a nefarious motive.

Only to those seeking to curb liberties and freedoms. If the internet is so bad, why continue to harp about the place you continue to frequent? It's not like you are part of the solution or anythiing, as your posts are impotent when relating to what governs usenet posting concerning identity.

_
Add to the fact that you can no longer partake in your old haunts and dx on cb because someone would probably turn your azz in...if you weren't such a jerkoff and were cool with people, you could operate with no fear and talk dx on cb with the rest of us who enjoy it.

>I never liked talking DX on CB after the first

>hundred or so contacts that I made almost 30

>years ago. DX is nothing more than a source

>of irritation to me, as the noise level prevents

>comfortable local chit-chatting.

Fine, No one faults you for it.

>You have.

Cite it. Show it. Link it. Another incorrect claim (read: LIE) you said took place but never happened. But I understand your need for such fantasy as resorting to claiming I have faulted you for local chit chatting. It justifies your mania.

_
But for you to come out here and
constantly complain about what bothers you over and over concerning cb, and tell others who really do enjoy cb and dx what is wrong with them doing it,in a cb group, no less, illustrates your motives, whether you are aware of your own behavior or not.

>And just what are "my motives" if you going to

>be presumptuous as to suggest that you might
>know?

Nothing at all presumptious conerning your constant problems with all that cb has to offer. You never post anything positive relating to CB,,,just always complaining about it in some manner or another. When you're not complaining about the CB, you're busy fancying yourself as looking at the outdated mode of communication as some type valid representation as a "reflection of society" as a whole. And when you're not doing THAT, you're busy not remembering what you said in past posts.

>Perhaps, It's just that I remember (fondly) how
>CB radio was in the 1970's.

Yea,,well so do I, but if you can't lend a hand get out of the road 'cause your old world is rapidly aging. So you better start swimming or you'll sink like a stone, for the times, they are a changin'.

>People played loose and fast with the rules,

>but despite all that, they were civil (most of the
>time) and the ratio of constructive or good

>clean fun conversations to idiots was far

>greater than it is today.

Not where I live. CB is pretty cool where I live and has been for some time.

>Maybe, my biggest flaw is hoping that the

>FCC, through legislation and enforcement, will
>do what people's inner conscience and

>morality fail to do, and that is act civilly and

>considerately.

The government has no business in legislating personal morality when another is not harmed.

If you're offended, shut it off, close the book, walk away.

>Any desire that I might have to talk long

>distance can easily be taken care of LEGALLY
>on the ham bands, so your conjecture is like

>many of your others, just plain wrong.

The hammie bands are dead for HF DX,,they got nothing on eleven meter, including freeband.

>Hello? There is nothing magical about

>propagation on 11 meters. If 11 meters is

>open then 10, 12, and 15 are also open.

Once again,,they got nothing (in other words, there is no comparison) on eleven meter. The crowds simply aren't there to make the contacts as they are on 11.

> When 11 isn't open, I can still talk on 20, 40,

>80 and 160 meters. If you want DX, there's no

>more consistent place to find it than on one of

>the several ham bands.

Depends what you define as DX. I prefer HF DX, no repeaters, my own low power and rig. Nothing but me and mutha' nature.

>When the sunspot cycle is high, 11 is wide

>open, and talking DX is like shooting fish in a

>barrel.

Shooting fish in a barrel was pioneered by repeaters for HF DX not cb. Get it right. 11 meter is much more difficult than 10 meter repeater contacts.

> But right now, the cycle is low, and DX

>opportunities are sporadic. I'm betting that I'll

>find more DX opportunities on the H.F bands

>than you will solely on 11 at the current time.

>BTW, Who is Kim T. Hall?

Exactly.

>Exactly what? Or is that whom?

Either way will work.

>Oh, and you might not believe this, but I'm

>glad that you survived the storm. I don't like to

>see bad things happen to anyone.

>http://home.ptd.net/~n3cvj

Why would I not believe that? Only subhumans wish ill will on others for stating their opinions.

>So at least I'm higher than a subhuman on

>your scale eh?

Oh yea. I think you're one who gets caught p in the moment while posting.

>Dave

>N3CVJ

Well, unbuilt 'cuz there are parts missing, but the built ones work.
Check out list of auction stuff....
http://cgi6.ebay.com/ws/eBayISAPI.dll?ViewSellersOtherItems&since=-1&userid=Kd2e4ajq&rows=50&include=0&rd=1

2607. Re: Best CB Radio 2004

Considering the TRC457 (more features/deluxe unit) sells used for $80-$125,
and the only completed auction on Ebay (7/2004)
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5706841548 had the
TRC490 sell for about $44 I guess you could say between $44 and $80.

Funny you should say that....one of the most "fun" rigs I ever had was an ol' 1011-C Siltronix. It was tuned/aligned by an old ham shop that used to be around these parts and man it was nice......took about 15 minutes to warm up and stabilize, but after that, she worked nice.

I bought it from a neighbor that was moving..even had the original box it came in...it was mint.

Ah, the memories:-)

All CB radios are JUNK.
Made in China Shit.or copies of the same copies.
When is there going to be a new radio developed from the ground up.

I set the dead key on AM to one watt and when the radio gets hot, it goes back up to almost full wattage and modulation sounds "pinchy" according to reports. I have to then cool it off before it will act normal again. Does anyone else see this with theirs? Mine is in my vehicle so the temperatures do get extreme. I find this happens a lot after it's been parked in the sun for a while. Today I tested my temperature theory by taking the cover off and holding the radio in front of the ac vent so it would cool off fast. It went back to normal in just under a minute. Sounds like a weak regulator. I hope some one has seen this before and knows the solution. I don't have a schematic for it. :-(

tia,
Dr.X

2621. Well, I know I'm new here, but I have made an observation.....

You guys argue worse than a gagle of women at a friggin' state fair bake-off!!! I think we oughta just rent a damn convention center in a neutral territory and have a friggin' cage match to end it all:-)

Ah, I must admit tho.....reading the bickering going on in here reminds me of days gone by.....Nah, strike that. Make it YEARS gone-by....like when I was 8!!!!

I still enjoy it tho...between insults/threats/policehams on rec.radio.cb/people with multiple personalities/people who need your social security number to verify authenication before having a conversation, there's some good stuff about CB/radio/electronics:-)

Special thanks goes to Dr DX and Twistedhed for actually CONFIRMING they "use" a CB.

LOL!!!

Don

Yea, the 1011D was a great SSB radio. Unfortunately, most folks that
used it on AM did not know squat about this radio. Most of em had the carrier
insertion up WAY to high and their audio sounded like pure CRAP!!
Also, see if you can find a "GOOD" Lafayette SSB-140. DAMN good radio!!!

What you are experiencing is called "thermal runaway" and is most
likely caused by either high quiescient collector current or a failure
of the heatsink coupling (loose power transistor). You need to take it
to a competent tech.

Since you are new here it might interest you to know that the same
Twistedhed you praise has been responsible for much of the threats,
insults and bickering over the years, as well as being one of those
people with multiple personalities.

Enjoy.

Ignore Frank. He is quite intelligent, but in times past has allied himself with those whom have an axe to grind about legalities. He's learned how dangerous those alliances can be to one's credibility, but he's still on probation with much of the group. Give him time....

Hi Frank. Thanks for answering.

I thought it was thermal runaway also, but I don't think so now. Although
the results are the same. Thermal runaway happens when the component
generates enough of its own heat to send it on its way. The issue I'm having
starts at 160 degrees F. The interior of the van gets to 168 sitting in the
Florida sun. Transmitting a dead key at 10 watts with an swr of 2:1 only
gets me 91 F and never goes into runaway. The heat sink compound is doing
it's job as is the sink itself. The final rf area never even gets warm.

The only hot spot in the radio is what appears to be a regulator mounted at
the left side about 2 in. behind the mode selection switch. I can't say what
that does since I don't have a schematic and I really haven't started poking
around in this radio yet (other than a quick crystal swap).

As for having a competent tech look at it, well I've been a component level technician for about 20 years but haven't messed with radio in about 10 years. A competent tech with a 10 year gap would want a schematic. ;-)

Thanks again for the reply.
-Dr.X

Then what you are asking for is a schematic. Sorry, I don't have one
for your radio.

I have a Cobra 148GTL, SWR meter and SWR CAL
stopped working a while ago. Tonight I also noticed
meter indicator works in RX, but dosen't respond to TX,
but radio seems to TX fine when i do radio check. Any ideas?
Anyone have a schematic for this radio?

>
>
>Whooa! I have never defended my "actions" by invoking another's
>lawlessness.

I have to be careful here, as you have a habit of taking things way to
literally. I don't mean "you" specifically, just CBers in general.
There have been many times when someone was making the case of the
lawlessness that exists on CB, to which you have replied that the ham
bands are "just as bad" or even "far worse", and citing the fact that
there are more FCC "busts" of licensed hams than of unlicensed
pirates.

The fact that there are problem on the ham band, does not diminish the
fact that there are at least as many (if not more) problems on CB. But
that didn't seem to stop you from "justifying" the bad behavior of
some CBers by citing the behavior of some "bad" hams.

>Nor have I ever defended a felon by unrealistically calling
>attention to another who may commmit simple rule infractions that are
>not enforced.
> Nor have I ever attempted comparing the two (the felon vs.
>the dx talker) or try to draw some type analogy between the two.

You are getting distracted by semantics. Someone who ignores FCC rules is technically a felon, or would be once caught, processed and convicted. But I'm not talking about defending the actions of a child molester by using a CB rule breaker as justification. I'm talking about using Ham radio rule breakers as a justification for CB rule breakers. Those are at least apples to apples examples.

> That
>you falsely accuse me of doing so does nothing.
>In fact, I have justified my actions to none at any time, as I have no
>one to answer to regarding my radio endeavors although you have always
>felt you are somehow owed an explanation. Some of you read my article in
>Sporadic Waves when another posted it here and blew a gasket. You
>especially, have demanded "justification" of "what gives me the right"
>to talk dx and "break the law".

The only reason that I demand "justification" is that you convey the attitude that ignoring federal radio law, is somehow your God given right. That you have rationalized that your rule breaking is such small potatoes that it makes it "OK" is hardly an excuse.

Do you not acknowledge that every citizen owes society their pledge to be good citizens and to abide by the established rules, even if we might have a personal problem with one or two of them?

For the record, I agree with you that freebanding is small potatoes. The problem I have is the slippery slope theory. Once you start justifying the ignoring of small rules, it becomes easier and easier to come up with justifications for ignoring larger ones. Until one is finally caught and made to pay the price, this slippery slope will continue.

I feel that society has slipped quite a bit already in the last 30 years. I'd like to see the trend reversed. That won't happen if people have little to no respect for rules, or feel that they will only obey the ones they feel they have a good chance of getting caught breaking.

>_
> posting the
>activities for the obvious...the main reason being is merely talking dx
>is not a crime for which the FCC takes action or enforces.

Talking DX on 11 meters is illegal under the current rules. So by all standards of definition, a person guilty of doing it, is committing a crime. Granted it's not on the same level as robbery, murder or rape, but it's still a citable offense, should the FCC ever decide that it's important enough to enforce.

>>How many times have Aaron, Frank, Leland,

>>why pick on CBers".
>
>
>
>None. I have always maintained time and time again you are
>status-starved and have no authority concerning people's behavior on CB.

Please don't make me bring up the posts that prove it. I quite frankly
don't have the time, but rest assured they are there. You have on
several occasions, when confronted by someone with a complaint of
CBers behavior, responded that hams have rule breakers too, as if that
somehow justifies the rule breakers on CB. Two wrongs don't make a
right. That is what I was referring to when I suggested that you were
being a bit hypocritical.

Yes they are. Ironically, in my new area, there is one channel with
any decent local activity. But as luck would have it, the people on
the channel rarely just "talk". They are usually involved with showing
off another new noise toy, or engaging in the verbal equivalent of WWF
smackdown. The rest of the band is pretty much dead now.
I'd love to have it they way you have described.

I tend to look at a glass that has 50% contents as half full also. The
problem is that when running across people, with respect to morality
and consideration, it seems that the glass is slowly dropping below
50%, and it's hard to see the positive side.

>NOT how America is, but how you wish it would be.

You know, I really have to laugh when you accuse me of being a
socialist. That is so far off track it's really funny. I am the
biggest fan of the free market, capitalism, freedom, and personal
responsibility. Hell, I'm voting for Bush, that's about as far away
from a socialist as you can get.

> The majority of
>American's (THANK GOD) do not subscribe to your bullshit about allowing
>the authorities and anyone else an open book to your life "if you don't
>have anything to hide".

As I stated before, I am a big supporter of the concept of freedom.
But with the RIGHT of freedom, comes the RESPONSIBILITY to follow the
rules of civilized society. It's not a free ride. If a significant
percentage of the population fails to recognize their responsibility
as a member of this civilized society, then their rights should be
proportionally removed as well. If people choose to hide behind the
freedom and "right" of privacy in order to commit crimes or subvert
the moral framework of society, then I am in favor of plugging those
loopholes in our Constitution which allows this type of malcontented
behavior to proliferate.

People who live honest, righteous lives have nothing to worry about,
as nothing will change. Only those with something to hide (or lose)
will have any fear. When I see people complaining loudly about this
logic, I have to wonder what it is that they are hiding........

As long as I have been here. I am an engineer, and I've been repairing
and working on radios for close to 30 years, so I have an interest in
serious technical topics, as they relate to CB.

So now it's your turn:

So then, you are of the opinion that this forum
should be nothing more than an unimpeded
free-for-all with no rules or decorum?

>>Discussions about technical topics should be
>>taken at face value, without the parties
>>displaying their credentials?
>
>
>
>Now you're catching on. No credentials needed for usenet posting, nor is
>the "identity", that has you reeling.

So as someone looking for technical information, you should take "bad"
advice at face value, without even the hint that it might be "bad"
advice? What accountability is there if someone takes someone's "bad"
advice and in the process ruins a once perfectly good radio?

>>It doesn't take any special courage or daring
>>to make inflammatory comments while hiding
>>behind an anonymous handle.
>
>
>No doubt about it. Same can be said for radio. Merely possessing your
>hammie call doesn't abdicate you from being anonymous if you wanted.
>Same goes for this forum.
>
>
>>People identify on ham radio for a reason.
>
>
>Yea,,,,,,it's the law.

Hmmm.... The law states that it's illegal to talk on the freeband, yet
it doesn't stop you. With hams (At least the good ones), following the
rules is not just a requirement, it's part of preserving the service
as a usable venue for the many facets that the service offers.

>>People don't identify on CB for the same
>>reason.
>
>
>Wrong. One is NOT required to identify on CB.

No, they are not required to. But the fact that many go out of their
way to conceal who they are, imply a certain suspicious motive.

>>I have far more to be suspicious of, when
>>someone is afraid to identify themselves.
>
>
>
>That is your right. And it's the majority of the rest of the world's
>right to be suspicious of you seeking another's identity on usenet,
>especially when you didn't listen to the world of security experts when
>they told you not to post publicly to the internet with your personal
>information.

I have nothing to hide. One might wonder about you though. What dark
secret prevents you from revealing who you are?

>There indeed are areas of the internet that a certain
>amount of identity is required, but usenet, especially a cb group, is
>not one of them. This is a very rare concern that has no relation to
>your life and voiced only by a bitter few.

Again, if there is no accountability, then there is nothing to prevent
the forum for degenerating into spam postings, vulgar language, and
general lack of respect. Sound familiar? Do you LIKE what this forum
has become?

>> I have to wonder what they are hiding from.
>>Why should anyone take what a person like
>>that says seriously, when they don't have the
>>character to identify themselves?
>
>
>Depends what you define as "identify".
>ï¿½ï¿½In your case, you ask for names, backgrounds, etc, of those who
>you disagree with on usenet.
>
>
>>I have NEVER asked for specific personal
>>details. However, a person's name, and their
>>credentials will establish their expertise in
>>related topics. Who would you be most likely

>>to believe on matters of radio, someone firmly
>>established in the art, with a good education
>>and background, or someone with the vague
>>identifier: "Rubber Duck"?
>
>
>Not even a valiant attempt.
>Some of those "good educations" you refer have posted directions on how
>to destroy your radio in the form of mods. This is exactly the reason
>one should take everything on the internet with a grain of salt.
>Apparently, you believe otherwise.

But, you see, if someone posted a well written, but "poison" mod as a
dupe to unsuspecting CBers, then that person needs to held accountable
for that. Thank you for making my case for me.

>And perhaps, just,,perhaps, because the entire world of security experts
>SAY SO?

>>ï¿½That is a bit of an exaggeration and a stretch of the truth.

>No, it's not at all.

I have not read anywhere where any "expert" tells you not to post on a
forum with your real name. The do caution you not to reveal too many
details, like SSN, credit card info, or other unrelated personal
details.

I don't ask for any more detail than what a callsign lookup on QRZ.com
would provide.

_
>What type accountability is
>it you wish to foster upon those who dare say something on usenet with
>which you may disagree?
>
>
>>There is nothing wrong with a healthy

I'm asking if that is how you feel?

>If my emotions were to take over, I would simply trn the thing off and
>walk away. No one is forcing you to partake in what you view as an
>injurous electronic arena. It is your choice.

The same "turn it to the left" mentality that abusive CBers use to force good people off of the CB band? Decent people should be forced to yield to malcontents, rather than fight back?

>>I believe in the example of not saying
>>something on a forum, that you wouldn't have
>>the cajones to say to someone's face.

>Very noble. Many agree with you. Obviously, those like Dogie, do not.

Doug has personal issues of his own. I suspect they transcend those of radio operation.

>>The fact is that being anonymous eliminates
>>the small chance that the person you may
>>insult might someday show up at your door to
>>have you "explain" yourself in person, thereby

>anyone who has a problem with me to come forward.

How does one "come forward" if we don't know who you are or where you live?

>...of course, those who
>do, encapsulate the very idea you are railing against...not identifying
>themselevs, only it doesn't bother me like it does you. I have an open
>door policy and will meet anyone from this group for coffee, fishing, or
>to continue our rec.radio.cb debates.

Ok, I'm coming to Orlando in October. I might make a detour to Tampa.
Where do you want to meet?

> So far, I have met several from
>this forum and plan on meeting more. If I didn't fish for the day, and
>we didn't talk about politics or cb, I am certain you and I would get
>along just fine on the boat for an afternoon ride talking of nothing but
>hammie radio.

Nothing wrong about talking about CB. I love the hobby (at least in
the old days), and I could tell you a few good stories. But in order
for you to talk authoritatively about hammie radio, that would imply
that you are a ham yourself (or at least should be). You've implied
similar before. The fact that you won't admit it one way or the other
probably speaks more about your fear of identification, considering
your admitted behavior on the freeband. Don't worry, I have a whole
website full of past antics, and no one has busted me yet. As I've
said before, I have nothing to hide......

>> Anonymity is the enabler for people to act
>>inappropriately, and rudely. Using the excuse
>>that privacy overrides acting in a civilized
>>manner is weak IMHO.

>No one suggested such..but the gist of it, is that American's are
>afforded the right to act like idiots, even it offends you to no end.
>Using the excuse that it ought be over-ridden is what is weak.

So then you assert that an American's right to act like an anti-social
idiot deserves more consideration than other people's right to expect
civilized behavior in public places?

>At the very least, if this occurred,
>one could surely prove such and illustrate the passage in the person's
>isp that relates to such behavior and the service will take action.
>
>
>>Usually ISP's will not yank someone's account
>>unless they become serious problems.
>
>
>
>Well, that's what you were talking about, Davie..those serious
>"malcontents", I believe was the word you used.
>
>
>

>> Simply speaking one's opinion (however
>>insulting or rude) is still a 1st amendment
>>right, and ISP's are reluctant to go down that
>>road.

>You weren't talking of an opinion, Davie, you spoke of character
>assassination.

Character assassination is either based on truth, or opinion. If the
claims are true then they deserve to be brought out. If they are
simply opinions, then it becomes a process to determine whether there
was any "real" damage done. Again this becomes complicated if people
"hide" well.

>>Having your identity known, at least tempers
>>the temptation to act like a retard.
>
>
>And goes against everything the world of security experts and all isp's
>tell you. As far as I know, acting like "a retard" is perfectly legal,
>but if you had your way, anything you deemed 'acting like a retard"
>would most certainly be illegal.
>
>
>>Acting rude, inconsiderate, or anti-social, is
>>also not illegal, but it's not something a
>>civilized person would do in a public forum.

>Therein lies the answer to what ails you. Not all people in public
>forums are civilized. Nevertheless, these traits you consider
>uncivilized, exist in these "bad" people you speak of, and unfortunately
>the word is made up of good AND bad people.

So then what is your conclusion? Should good people be turned away
from public forums (Both radio and internet) by the behavior of the
bad people? Do good people not have some right to protection from the
worst of the bad people? Isn't this in the best interest of society?
Is the right of privacy so important that you would allow it to
supersede keeping public places to at least a minimum amount of
decorum?

>>Why should this newsgroup be treated any
>>differently than an in-person venue?

>I happen to agree with you on this item, but why should others be forced
>or made to conform to our view? They shouldn't.

Why not? Personal freedom does not (or should not) extend to the
ruination of other people's freedom or right of access.

>>I would not want to make these activities
>>"illegal". If you want to act like a retard, by all
>>means, go for it! But we all have the right to

>>know who it is that is acting like the retard so
>>that they can properly face the repercussions
>>that that type of behavior brings.

>No,,you don't have the right to know the identity of one just because
>you feel he is acting like a retard.

If the behavior is continual and affects more than just one person,
then that changes things.

> But,,keeping with this thought you
>put forward, you just described exactly what happened to Dogie.

As it should be. Everyone who acts in that manner should be removed
from society where they can no longer harm the activities of others.

>>That's what I mean by accountability. If you
>>had to "face the music" for acting
>>inappropriately, you would eventually adopt an
>>incentive to NOT act that way. The quality of
>>the forums would increase considerably.

>What you feel constitutes "quality" is the opposite of what many others
>feel. The loss of personal privacy in this world is never an improvement
>in the quality of anything.

Why? Why should it matter if people know who you are? Are you THAT
paranoid?

>
>You do? Shall we take those inquiries one at a time concerning those

>"challenge the validity" of your claim.

I don't have a credible source. I didn't "find" the incident. I was personally involved with it.

>>first by trying to find some sort of difference
>>between "a suburb of" and "suburban",
>>suggesting that I was lying.
>
>
>
>You are lying now. YOU were the one to invoke the word "suburb", not I,
>and you invoked it when the heat got to hot and you realized, like said,
>the court documents would confirm your story. I note you originally
>claimed it happened IN Philthadelphia,

I never EVER claimed that it happened IN philthy. Never. I said that it happened in SUBURBAN (Meaning in the suburbs) of Philly. Why I chose that wording instead of just saying that it happened in Norristown, should be obvious. This is an international forum. Ask someone from another geographical area if they're ever heard of a relatively small town (such as Norristown) and they will most likely not. But mention a popular city as a geographical point of reference, and it's another story.

> and when I pressed on, you began
>the back pedal

What you call "back pedal" I call "clarification. Nothing changed except the precise wording.

>and insults, playing games and getting elusive and only
>then invoking "suburban" Philly. You provided nothing to this day
>concerning this alleged case except more posts full of lipservice and
>smoke..

What more do you want? I told you all the details. I never knew the defendant's last name (part of that anonymity aspect of CB) only that the name he went by was "Floyd" (Which from other people, is his middle name, his fist name is Anthony). It happened in Norristown Pa (A suburb of philly) in the late 90's.

>> When you failed to find any information

>AFTER you claimed it was in Philly,

I never claimed it was IN philly. You will not find any post which claims that. That you feel that suburban philly means the same thing as IN philly was your mistake.

> and AFTER you failed to provide
>anything at all concerning this case other than your lipservice.

I don't need to go through the trouble to pacify you. If you want to go through the trouble to request (at your cost) microfiche records, then go for it. But because you can't find it on the internet, does not mean that it doesn't exist, nor that I "lied" about it.

>> you again inferred that I was lying.
>
>
>
>You were, and are.

Nope. It was the truth. I only wish I had a way to prove it to you, so
you can feel as foolish as you should.

>>Even when I told you the exact town,
>
>
>You never said the exact town and if you did, you NEVER linked it with
>the case you claim occurred or in the same thread. Since you claim

>scientist yelling "The world is flat. I dare you to disprove
>me....haha". One doesn't need disprove another's ramblings concerning
>their own specialty. In such cases, one merely asks them for their proof
>and watches them fall apart.

It's true as far as I'm concerned. You made it one of your life's
goals to disprove it. If you want to believe that I lied, then feel
free. It doesn't make nay difference to me, or to the guy who had to
pay a fine because of it

>>Defending my position and questioning your
>>logic is hardly "attacking" you on a personal
>>level.
>
>
>
>When you continue to say "I know it happened and it isn't enough for
>*you*,,that is making it personal, as once again, I didn't make the
>rules of society, I merely conform to them and in society, the burden of
>proof is on the claimant, that's just the way it is.

Yet you ignore certain other rules of society when it suits you.
Pardon me if I don't buy this high road of societal responsibility you
are attempting to drive on.

>>That you cannot understand how someone
>>would not understand your initial reference to
>>an antenna that was part of a 10 year old
>>repeater system, and took my apparent
>>unfamiliarity as a sign of lying is not my
>>problem.
>
>
>
>
>Of course it is. You have already demonstrated you are not familiar with
>curent FCC law regarding the governing of CB. Now, how many CBer's and
>hammies present that are posting regs like yourself, can not remember an
>antenna they had, especially if it was part of THEIR repeater system.

Quite a few. Especially when hit with a quick question from out in
left field. I don't look at the repeater system's equipment as "my
personal station".

> In
>fact, the majority can recall just about every radio set-up they ever
>had. I grew up in a home with a moonraker IV many years ago. If someone
>asked me "still have the moonraker?".....I would have immediately
>recalled the antenna to mind and so would the majority of radio ops. But
>not you. If one doesnt lie, one needs not worry about remembering such
>bullshit.

I never had a stationmaster as part of my antenna system, so I won't
remember it.

>>and accountability to
>>say so in a serious and mature manner. If I
>>misbehave like the hordes of anonymous
>>posters on this group, it becomes a simple
>>matter to rectify the situation.
>>
>It's not up to you Davie, to rectify anything. THAT'S your problem...you
>think it is.

>>It should be every person's responsibility to
>>"rectify" the problem in order to preserve
>>civility.
>
>
>
>You said you are realist,yet here you sit posting the opposite and
>telling us how "it SHOULD be", right after posting you don't partake in
>such behavior.

Nothing hypocritical about it at all. It's one thing to live and work
in the real world, and deal with it as such. It's another to ponder
how to correct the ills of society. I recognize the faults of society
and deal with them within my limits. But that doesn't prevent me from
looking for a better solution

>See? Your bullshit is so deep, you can't recall what you wrote
>a few paragraphs ago.

You are so confrontational and literal that you take every small
nuance difference as a contradiction.

>
>_
>You are illustrating the
>risks of the internet perfectly with your citing "bad" people,,,,,all
>the more reason to follow the internet security experts advice, Davie.
>Just because one doesn't post with their real name, Davie, doesn't make
>them "baaad" people.
>

>
>>No, that in itself doesn't. I never said that all
>>people who post anonymously are "bad", but it
>>is by far more tempting for them to be, rather
>>than if they are easily identified.
>
>
>Now you are concerning yourself with the temptations to your fellow man
>caused by anonynmity on the internet. If this is what you need concern
>yourself with, you lead a blessed life.

There is a difference between identifying the source of a problem and
"concern" for it.

>>If you have nothing to hide, you have nothing
>to fear.
>

>
>
>Wrong. Your entire point revolving around having nothing to hide is
>invalid and anti-American and is NOT the way we do things herte in the
>USA, at least, not yet.
>
>
>> If you have nothing to hide,
>>you are more likely to be up front about your
>>motives.
>
>
>
>That's NOT what you said,,,you said if you have nothing to fear then you
>have nothing to hide, and THAT, my friend is Orwellian totalitarian
>bullshit.

No, I said if you have nothing to hide, you have nothing to fear. I
shouldn't have to explain the nuances to you. If you have nothing to
hide, you are more likely to be up front and honest (That is the
"fear").

>> People who insist on anonymity are
>>suspicious right from the start.

>I give you Thomas Paine.

I don't want him.

>>What is it about their presence, ideas, or
>>opinion would predicate a need to remain
>>anonymous?
>
>
>

>Unfair retailiation by neanderthals who feel they have a right to decide
>how others should live.

Woah! So you believe that it is unfair that people who state their position should be held accountable? People should be allowed to lob anonymous rhetoric bombs for little more than disruption of society, without repercussions? We all have rights, and we all have responsibilities. You have as much of a voice in policy as I do. But if you want to be taken seriously, have the balls to sign your name to the bottom.

> Unfair imposition by those who don't agree with
>what was written. Oppressive governments, like the one that is
>responsible for people like you being scared into giving up liberties in
>the name of temporary security. People who feel they are somehow owed an
>explanation by internet posters and retaliate with personal attacks
>concerning offtopic and inquiries of personal matters and lives. The
>reasons are endless.

And equally valid. You have yet to justify a good reason why someone should be allowed to hide behind a cloak of anonymity. If their intentions are serious and worthy of note, then they have nothing to fear by attaching their name to the bottom. Conversely, why should anyone take seriously anything written by someone who doesn't have the intellectual fortitude to sign their name to it.?

>> That implies a nefarious motive.
>
>
>
>Only to those seeking to curb liberties and freedoms. If the internet is
>so bad, why continue to harp about the place you continue to frequent?
>It's not like you are part of the solution or anythiing, as your posts
>are impotent when relating to what governs usenet posting concerning
>identity.

Interestingly, I am involved on a peripheral basis, with the proposed technology changes which would make internet identification automatic. It would eliminate security concerns for people engaged in internet commerce. It would also reduce or eliminate spammers, criminals, and other purveyors of the dark side of the internet. So I am somewhat a part of the eventual solution.

>>Any desire that I might have to talk long

>
>The hammie bands are dead for HF DX,,they got nothing on eleven meter,

>including freeband.
>
>>Hello? There is nothing magical about
>>propagation on 11 meters. If 11 meters is
>>open then 10, 12, and 15 are also open.
>
>
>
>Once again,,they got nothing (in other words, there is no comparison) on
>eleven meter. The crowds simply aren't there to make the contacts
>as they are on 11.

And that is a BAD thing? I prefer quality to quantity. I prefer to
have an hour long QSO with a DX station without having to swat at the
DX chasers like flys who are constantly barging in on frequency.

>
>> When 11 isn't open, I can still talk on 20, 40,
>>80 and 160 meters. If you want DX, there's no
>>more consistent place to find it than on one of
>>the several ham bands.
>
>
>
>Depends what you define as DX. I prefer HF DX, no repeaters, my own low
>power and rig. Nothing but me and mutha' nature.

Why would someone consider operating through a repeater as DX?

On the HF ham bands DX is normally considered anything that is not
stateside. On VHF and higher, DX could be 100 miles, or the moon.

>>When the sunspot cycle is high, 11 is wide
>>open, and talking DX is like shooting fish in a
>>barrel.
>
>
>Shooting fish in a barrel was pioneered by repeaters for HF DX not cb.

Who is talking about repeaters? Where are there repeaters on any band
below 10 meters?

>Get it right. 11 meter is much more difficult than 10 meter repeater
>contacts.

How difficult can it be when you have all those "crowds"?

>> But right now, the cycle is low, and DX
>>opportunities are sporadic. I'm betting that I'll
>>find more DX opportunities on the H.F bands
>>than you will solely on 11 at the current time.
>
>>BTW, Who is Kim T. Hall?

>
>Exactly.
>
>>Exactly what? Or is that whom?
>
>Either way will work.
>

Evasive are we? So who is Kim T. Hall?

A relation of mine perhaps? One that you found through some sort of
internet search? That's the funny thing about having a name like mine.
I might as well be anonymous as common as the name is. It's hard to
sift through all the information your searches come up with when you
enter my name in.

>>Oh, and you might not believe this, but I'm
>>glad that you survived the storm. I don't like to
>>see bad things happen to anyone.

>
> Then what you are asking for is a schematic. Sorry, I don't have one
> for your radio.

Yes, I guess I am asking for a schematic. But I was also hoping that some
one had already experienced this and would save me some time. That's ok,
I'll just keep looking for a schematic or just use some common sense to
track it down. I'll be getting into it this weekend anyway to tinker around.
I'll fix it then.

Thanks again Frank.

There is no money to be made by the corps. therefore no R&D. The way this hobby is dying off we are lucky they still produce them, even if they are junk.

I can't help note but you have begun your games again, selectively
snipping questions you pose and have great difficulty when given replies
with which you disagree. Editing your gaffes so that they no longer
appear illustrates only that you not only recognize such self-created
buffoonery, but go to great lengths to attempt to conceal it.
By introducing the behavior of selective snipping and editing of your
replies, you have intentionally compromised the thread. What you fail to
comprehend is such behavior merely serves to facilitate your own
degrading commmunicative skills.

_
CB IS anonymous, it's going to stay that way, get over the gastric pain
it causes you.

>And that is the main reason why there are so

>many malcontents on there.

Perhaps, perhaps not, but that is neither here
nor there, and a problem of yours. Stop trying to make it someone elses
problem.

>It's everyone's problem unless,

No, it's not everyone's problem,,it's YOUR problem. Not everyone sees CB
as full of malcontents. Some see hammies like yourself as the
malcontents for feeling you have some sort inalienable right to demand
cbers jump through the same hoops you must jump through regarding hammie
radio.

>of course, you are one of the malcontents who
>enjoys ruining other people's fun.

CB is not like that in my area. We have one channel with the lulu's,,the
rest yield great local roundtables and everyone radio-wise pretty much
knows everyone else. Being so close to Philthy, I can understand why CB
must be mess in your area. Those people are vile.

>Yes they are. Ironically, in my new area, there

>is one channel with any decent local activity.

>But as luck would have it, the people on the

>channel rarely just "talk". They are usually

>involved with showing off another new noise

>toy, or engaging in the verbal equivalent of

>WWF smackdown. The rest of the band is

>pretty much dead now. I'd love to have it they

>way you have described.

Then what is preventing from you from getting on that channel and speaking your mind to those people as you do on here concerning your radical and minority beliefs. After all, that would make you proactive instead of reactive like you have always been here, and I am certain we can count on you to offer your beliefs to those on the air using those noise toys that have you bleeding from the ears and nose, because we all know you believe in saying the same things here as you would face to face. Try it with the noise toys and on the radio with these people,,tell them they are the equivalent of the WWF. Report back.

>Even the youngest, still wet-behind-the-ears

>hooligan will tell you that they tend to partake

>in more mischief if they have less of a chance

>of being caught.

It's sad that your trust in fellow man has eroded to such a point. Most of us look for the good in people, not the bad.

>I look for the good in people too. It's a shame

>that it's getting harder and harder to find.

Yup, it is, but that doesn't shake my faith of always seeing the glass half full and noting the good instead of the bad in most cases..that's why it's called "faith".

>I tend to look at a glass that has 50% contents
>as half full also.

Not with CB, society, the FCC, and personal privacy rights you don't

>The problem is that when running across

>people, with respect to morality and

>consideration, it seems that the glass is slowly
>dropping below 50%, and it's hard to see the

>positive side.

That IS a problem of yours, no doubt. I still find the majority of
people to be good hearted. Must be southern thing (shrug),,if I'm wrong,
I'm sure a yankee will correct me to say it is you that are wrong and
that people, even in the north, are generally good people.

>Wanting to believe that some people are

>good, does not change the fact that a great

>number are bad. I am a realist, I deal with

>reality, not how I'd like it to be.

Not true at all. You subscribe to socialist views and rhetoric,,,this is
NOT how America is, but how you wish it would be.

>You know, I really have to laugh when you

>accuse me of being a socialist.

It's true, In fact, this is another of those little times that I will
not only remind you that we have had this conversation long ago and many
times, but that in what remains one of my more favorite exchanges with
you, you not only embrace socialist beliefs, but go as far as to DEFEND
those beliefs and offer several reasons WHY you believe that bullshit.

>That is so far off track it's really funny.

You not being aware of how snowballed this adminsitration has sheople
like you isn't at all funny, it's frighteningly pathetic.

>I am the

>biggest fan of the free market, capitalism,

>freedom, and personal responsibility. Hell, I'm

>voting for Bush, that's about as far away from

>a socialist as you can get.

I'll make this very simple. Bush swore with his hand upon the Bible that
he would uphold and protect the constitution. Immediately after taking
office, he launched an assault upon it. His reasons for doing so are
irrelevant, as are yours.

_
The majority of
American's (THANK GOD) do not subscribe to your bullshit about allowing
the authorities and anyone else an open book to your life "if you don't
have anything to hide".

>As I stated before, I am a big supporter of the

>concept of freedom.

Except when it comes to others exercising THEIR freedoms that you think should be curbed,,such as the right to anonymity on the internet, just for starters.

>But with the RIGHT of freedom, comes the

>RESPONSIBILITY to follow the rules of

>civilized society. It's not a free ride.

Ride? What is this ride you speak of? You have rambled from speaking of anonymity on the net, (one's right) and your problems with it saying one shouldn;t have that right, and once again linked CB to society and presented your problems with all three in discombobulated fashion. You still need that vacation, Dave.

>If a significant percentage of the population

>fails to recognize their responsibility as a

>member of this civilized society, then their

>rights should be proportionally removed as

>well.

3% of the population of the US HAVE been "proportionally removed" due to poorly constructed laws that created non-violent criminals. We have more incarcerations than any other country on Earth. Keeping with your radical and oppressive beliefs, we must have the worst, evil, people to be found on the planet, eh?

> If people choose to hide behind the freedom

>and "right" of privacy in order to commit crimes
>or subvert the moral framework of society,

>then I am in favor of plugging those loopholes

>in our Constitution which allows this type of

>malcontented behavior to proliferate.

Again, Thank God the majority do not share your belief. Free society is not perfect and those "loopholes" will always be there in order to make a free society work. Plugging what you wrongly refer to as "loopholes" in the US Constitution does nothing but take away rights of ALL Americans, whether they choose to exercise those rights or not. Just because you choose not to, you damn sure don't have the right to tell others that they should not be able to exercise same and as it stands now, such is the law.

>People who live honest, righteous lives have

>nothing to worry about, as nothing will change.

Bullshit. Over 50 people have been exonerated by DNA this year alone for crimes they were wrongly accused. Just last week a man was released from death row after 22 years when a DNA completely abdicated and absolved him from the murder for which he was doing time. I won't even bother to inform you of the rate of crooked cops in cities like LA and NY, as you are myopically not aware and it is apparent that you feel these innocent victims who lose their lives and families are just the acceptable kill and error ratio.

>Only those with something to hide (or lose) will
>have any fear.

Again, bullshit.

> When I see people complaining loudly about

>this logic, I have to wonder what it is that they

>are hiding........

And when people see you demanding personal identity of usenet posters which goes against all advice from experts and security experts and privacy experts, especially when taken into consideration the usenet group is dedicated to CB, an anonymous hobby, the majorty has to wonder why it is you seek such personal information as it is not relevant to anyone but yourself in this group..

_
That one would seek to mete out "accountability" for posting one's opinion in usenet illustrates a freak, dude!

>Not at all. If you are attempting to pass

>yourself and your opinions off in a serious

>discussion, with any sort of credibility, you

>have to be accountable for what you say.

In a group dedicated to mere posting concerning an anonymous hobby, what type accountability and credibility do you seek? How long have you looked to cb venues seeking "serious" discussion?

>So then, you are of the opinion that this forum

>should be nothing more than an unimpeded

>free-for-all with no rules or decorum?

Please try not to answer a question with a question. How long have you looked to anonymous cb venues on the internet seeking "serious" discussion?

>As long as I have been here. I am an

>engineer, and I've been repairing and working

>on radios for close to 30 years, so I have an

>interest in serious technical topics, as they

>relate to CB.

Well, there is yet another problem of yours that you answered yourself. Since you see this specific forum as such a poor venue, you need to look to other places for your needs, 'casue you been at it for years here pitching your bitch about CB yet you still haven't figured out that you are not going to to control others actions. Of course, you can invoke that "fence sitter" that never posts and claim you are trying to reach this mythical creature. Perhaps that will allow you to believe a slight victory and you won't feel like you are waging a fight that "has to start somewhere" to clean up radio to the point you wish it.

>So now it's your turn:

>So then, you are of the opinion that this forum

>should be nothing more than an unimpeded

>free-for-all with no rules or decorum?

I do not concern myself with the manner in which usenet is constructed. You have so many problems with this group, but crying about what you don't like is reactive, Dave. It won't change a thing. I mean, now you're alluding to the manner in which this group is governed..somehing totally transparent to you or I and beyond your ability to do anything about. Have you ever realized you spend a great deal of time worrying about something over which you have no control? Of course, you do. It drives you to frustration and it manifests here.

>Discussions about technical topics should be

>taken at face value, without the parties

>displaying their credentials?

Now you're catching on. No credentials needed for usenet posting, nor is the "identity", that has you reeling.

>So as someone looking for technical

>information, you should take "bad" advice at

>face value, without even the hint that it might

>be "bad" advice? What accountability is there

>if someone takes someone's "bad" advice and

>in the process ruins a once perfectly good

>radio?

No accountabilty, which is why the internet and isps and usenet have discalimers you agree to prior to being able to access such information. You are really wound tighter than a slinky, Dave. You tend to forget, deliberate, bad information has been posted here by a certain hammie scumbag, that gave directions on how to ruin a radio,,,, disguised as a mod. Sorry you feel what you find on usenet and the internet is so credible. No wonder you are voting for Bush, as only the gullible are doing so.

>It doesn't take any special courage or daring

>to make inflammatory comments while hiding

>behind an anonymous handle.

No doubt about it. Same can be said for radio. Merely possessing your hammie call doesn't abdicate you from being anonymous if you wanted. Same goes for this forum.

>People identify on ham radio for a reason.

Yea,,,,,,it's the law.

>Hmmm.... The law states that it's illegal to talk

>on the freeband, yet it doesn't stop you.

Freebanding has nothing to do with hammies identifying "on ham radio for a reason". Try and remain on your invoked topic. You claimed people identify on the hammie radio for the same reason,,,,,you're wrong. It's the law to identify on hammie radio, it is NOT the law to identify on usenet or cb, but you have really been confused with the law lately, as it relates to CB.

>With hams (At least the good ones), following

>the rules is not just a requirement, it's part of

>preserving the service as a usable venue for

>the many facets that the service offers.

>People don't identify on CB for the same

>reason.

Wrong. One is NOT required to identify on CB.

>No, they are not required to. But the fact that

>many go out of their way to conceal who they

>are, imply a certain suspicious motive.

Heheh,,,,of course they do, that is what one is supposed to do on cb,,,conceal their personal identity. You really don't know much about anything CB related.

>I have far more to be suspicious of, when

>someone is afraid to identify themselves.

That is your right. And it's the majority of the rest of the world's right to be suspicious of you seeking another's identity on usenet, especially when you didn't listen to the world of security experts when they told you not to post publicly to the internet with your personal information.

>I have nothing to hide. One might wonder

>about you though. What dark secret prevents

>you from revealing who you are?

Oh, I have no problem revealing who I am...in person. What great fear stops you from completing your mission concerning my personal information? If you wanted to know that bad, you would come down and meet me like others have..unless, of course, you have some dark secret fear, preventing you from doing so, and you would rather whine and cry here about something so bloody off-topic that only you are consumed with it. In that way, there is no danger of you having to live up to your word and saying things in person instead of on usenet that are offtopic, such as personal information.

_
There indeed are areas of the internet that a certain amount of identity is required, but usenet, especially a cb group, is not one of them. This is a very rare concern that has no relation to your life and voiced only by a bitter few.

>Again, if there is no accountability, then there

>is nothing to prevent the forum for

>degenerating into spam postings, vulgar

>language, and general lack of respect. Sound

>familiar?

Sure does, ,,,, as only you are heretically demanding accountablilty from usenet internet strangers. Lets see,,,,who would you start with? LMOA.....you're fallen and twisted yourself again, dude..

>Do you LIKE what this forum has become?

I do. I have met many good folks, I have daily emails with regs, I have anything in the manner of radio, cb, hammie equipment I could possibly want, and I owe much of it to this group. tyvm.

>I have to wonder what they are hiding from.

>Why should anyone take what a person like

>that says seriously, when they don't have the

>character to identify themselves?

Depends what you define as "identify".
  In your case, you ask for names, backgrounds, etc, of those who
you disagree with on usenet.

>I have NEVER asked for specific personal

>details.

Sure you have. You have inquired as to my work on past occasion, what
town I live in, my name, my call sign,,,why, in fact, you have overly
concerned yourslef with my identity for years and you;re still doing
it..look at the lenght of this thread,,,all because you are still
experiencing growing pains because the law regarding internet use is not
the way you wish it. Another example of what you want and not the way
the realism exists.

> However, a person's name, and their

>credentials will establish their expertise in

>related topics. Who would you be most likely

>to believe on matters of radio, someone firmly

>established in the art, with a good education

>and background, or someone with the vague

>identifier: "Rubber Duck"?

Not even a valiant attempt.
Some of those "good educations" you refer have posted directions on how
to destroy your radio in the form of mods. This is exactly the reason
one should take everything on the internet with a grain of salt.
Apparently, you believe otherwise.

>But, you see, if someone posted a well written,
>but "poison" mod as a dupe to unsuspecting

>CBers, then that person needs to held

>accountable for that. Thank you for making my
>case for me.

No, they DON'T need held accountable for that. If you read your user
agreements when accessig the internet and usenet and all that governs
such, you would find disclaimers for such info. This is where your
socialist views and censorship are magnified. You have maintained in the
past that, for example, instructions for homemade bombs (just for a
SINGLE of endless examples) should be censored. Your argument is weak.
If the information is out there, you want the person that put the
information out there to be "held accountable. Since that is the way you
feel, why did you agree to the terms of usenet access via your isp ?
Since you no longer agree to the terms of service, you should inform

your isp of your decision.

_
And perhaps, just,,perhaps, because the entire world of security experts
SAY SO?

>That is a bit of an exaggeration and a stretch o

>f the truth.

No, it's not at all.

>I have not read anywhere where any "expert"

>tells you not to post on a forum with your real

>name.

Not surprised. You haven't read the laws in over twenty years governing
CB radio, and you haven't read your terms of services, either.

>The do caution you not to reveal too many

>details, like SSN, credit card info, or other

>unrelated personal details.

Wrong,,,they do not say 'details",,,they say "personal information" and
your semantic slide is not achieving the shift for which you were
reaching.

>I don't ask for any more detail than what a

>callsign lookup on QRZ.com would provide.

Yet, you carry on and invoke your own version of what usenet SHOULD be
and how YOU feel it should operate when you are denied this information.
Despite your claim, your views are NOT those of a realist, but of one
who clamors for a way in which it simply isn't.

2642. Re: Cobra 148GTL Meter dosen't work properly

Newsgroup: rec.radio.cb
